2. Wanted Items

Yahoo group: MW800
Date: 2010-02-15 16:39:38 UTC
From: Brad Hazel
Topic: 2 Message: 2

(1) Looking for the MW800 Drivers and Software plus any 3rd party application that unique, interesting or cool!
(2) Looking for a Service/Repair manual for the MW800 or its part number. Would like to also have a parts breakdown sheet.

Add them to the File section if you have something. If you not shure contact me.

WA8IQO

MW800 service manuals etc are pretty rare. 90+% of all the parts are depot only items, unfortunately.

In about a week when I get back home I can upload some drivers etc. Other than the extra key app, I don't recall seeing any custom written MW800 software (yet).

Does any one have the Motorola part number for the the Service Manual?

I know most of the parts are OEM but is there a reference book that list a parts breakdown along with part numbers? Iv been to Motorola Online and a search doesn't turn anything up.

I have a Motorola Business Account and if the prices are right I may just order them. I thought about going to my local M dealer but there not to friendly. I'm leaving them as a last resort.

If I can gather enough information before the servicing is discontinued and the information disappears I my just build a web site dedicated to the MW800 to preserve a lot of the information for second hand users. Kind of like what Mike B has done for the Spectra Radios.

It suspires me at how popular second had MDT's are with in the HAM Communities so I think a site would contribute something to other HAM's. If anyone thinks I'm wrong speak your mind as I don't want to waste time and money on something no one would benefit from or use.

5. GPS Antenna and Software, Your Opinion!

GPS Antenna and Software, Your Opinion!

(A): I want to use an NMO permanent mount GPS antenna on my vehicle with the MW800. What do you think is the correct antenna to use? What is the Correct Gain, Freq. and so forth? I'm looking at two types that are on eBay right now. What is correct?

(1) Radiall Larsen GPSNMO02 GPS Antenna NMO Mount -
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=220466516266&ssPageName=STRK:MEWAX:IT

(2) GPS NMO MOBILE ANTENNA -
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=310197210793&ssPageName=STRK:MEWAX:IT

(B): I also want to load mapping software that has real time tracking and updates. I've used Delorme's mapping software in my laptops and my old MW520. However the only difference was I used the USB receiver that came with the Delorme Bundle. Don't want to do it that way again.

Topic: 10 Message: 10

Welcome and thanks for joining the Motorola MW800 Series Mobile Data Computer Group hereat Yahoo!

I have been a long time fan and admirer of Motorola MDT's. Through out the last year my efforts have reveled that quality forums and information pertaining to the purchase/sale of, use of,and/or modification/repair/customizing of these terminal are far and few between.

There are acouple of related sites with limited information and my or may not have moderation for posting or have restrictions on topics and what you can and cannot ask for.

It has only been recently (Feb 2010) that I have become the proud owner of an MW800 so my knowledge for now is limited. With that being said, I started this group to bring those together who are knowledgeable with the MW800's to not only help grow my personal knowledge but others in the same.

This site will be membership based and moderated so posting Ad's or SPAM-ing for non-related items or services will not be tolerated. In addition the rules for good "Netiquette" will be the accepted standard of practices for communication with in the group. As the group grows additional moderators will be required so keep that in mind should you be willing to volunteer your time.

It will be important that every one help build this forum by not only spreading the word, but contribute quality and reliable content to the photos, files and links sections in addition to regular posting. In order to keep the group from going sterile, I may make post from time to time just to stimulate conversation and keep things going. I ask the same of you as well.

Additionally, I ask all new group members to take a moment and make there first post by introducing themselves. Make mention of your area of interests along with your skill level and wither your interested in giving or receiving help and or both. Do be shy

If you have an administrative question, need posting help or clarification on what's appropriate or wish to report a violation of the rules, please feel free to contact me or another moderator for
guidance.

Also fee free to visit our friends at:

The MW520 Forum: http://tech.groups.yahoo.com/group/mw520

The Gang at the Batwing Laboratories was everything is Motorola:

I use the quad band sharkfin antenna that you can get from Tessco. It has a wifi, cell/data and gps antenna.

Uses 3/4 hole (same size as NMO).

I use the Garmin Mobile PC software for gps use and the internal MW GPS

Most MW parts will not show up on MOL/Business Online...depending on what type of account you have. In addition since most are depot only items, they will not show up reguardless. This is why you will not really find a MW800/810 service manual as it was never released outside of Motorola.

Even if you did find a basic or detailed service manual, there is nothing in there that you could really order.

As an interim for accessories, you can (depending on MOL access) is look under the accessories? section of MOL for cables, keyboards, etc that are used externally to the computer. Anything internal will not be listed.

18. CPU Shutdown Issue - Help?

Yahoo group: MW800
Date: 2010-02-17 23:35:18 UTC
From: Brad Hazel
Topic: 18 Message: 18

Got the new MW800 the other day. I've been running it though test and setting it up on the bench before installing in the Expedition. It seams that it doesn't want to shut down when told to do so ☐ ever!

If I go to the start menu and select shut down, it will restart and not shut down. If I press the on/off button on the side of the monitor it will restart and not shut down. If I push the on/off button on the CPU it will bet your never guess? Yep, it will restart and not shut down.

I'm thinking it is a programming issue through the Maintenance Programming Software as I have selected the proper settings in the Windows through set up and the control panel. Am I correct or am I missing something?

Does anyone have the Maintenance Programming Software? Also, can I view the current state of the programming on the terminal without the Maintenance Programming Software? All it has on it for programs is the VRCH, ExtraKey, CPU Manager, Volume Bar, Display Tester.

The mounting bracket is FHN6388A. I believe its listed as canceled in MOL. You might still be able to get one by calling parts ID but its 50/50 in getting them. I think list price was $50 (but usually cheaper depending oin discount).

MPS does change some of the CPU settings, but its not all inclusive as one might think. I'll see whats on mine in the morning.

Sounds more like a Windows XP issue than anything else as I had the same problem with a MW520. I think ignore and shutdown are the only two options when it comes to the display CPU button.

Also it could be related to your power (windows power settings) for the shutdown sequence (I've also seen that with various computers). The MW is an APM compliant computer in terms of power saving and all tha jazz, so you also get the same hibernate/sleep/etc power issues that goes along with that.

24. For Sale: 2 MW800's

Yahoo group: MW800
Date: 2010-02-24 01:37:46 UTC
From: BH
Topic: 24 Message: 24

I have two used Motorola MW800's for sale. These items are used and do have some scratches, chips and or fading. I would consider them approximately a 7-8 on the comedic scale.They have been tested and are guaranteed to work. Hard Drives have been wiped by previous agency so you will need to provide an O.S. while all drivers and documentation are available in the Files section of the group. They are available as a complete set for $800 + Shipping or by individual parts as priced below. All reasonable offers will be considered! Individual items shipped via USPS Priority mail at the flat rate of $12. Email for pictures.

CPU Model #: F5207A - $350 O.B.O. (1.8mhz processor with 40 gig Hard Drive, no W-LAN, GPS or W-WAN)
Monitor Model #: - $450 O.B.O.FLN3062B (No Blue Tooth)
Monitor Cable #: - $50 O.B.O.FKN8068 (4.5ft)
Keyboard Model #: FLN9890A - $100 O.B.O. (Backlit Red)

No CPU mounting bracket, CPU power cord or monitor power cord included. New Old stock or used Lund Industries mounts available from my friend at Priority1Emergency.com for $50 and under.

View them at: http://priority1emergency.com/catalog/index.php?cPath=76_95&osCsid=c85376b9e530eeb88b9977600d21663a

Hey PJ!

Did you get a chance to look at your settings for my shut down issue? I still cant figure it out. All of my settings are correct in the "Power Option Properties" with in the OS and within the CPU & Monitor settings via MPS.

Where else are there power settings in the OS other than the above mention?

Im confused/fustrated...

It's currently on the bench. Didn't want to install it until I took care of the issue.

I talked with the department I got them from. There tech told me that they had Motorola set them so the patrol offers could not turn them off. Even the tech did not know what M they did. He stated they if the tech's needed to turn them off for servicing, that did a forced shutdown by holding the power button down in order to get turn them off.

The setting is in the OS I believe, as I pulled the hard drive from the unit and put it in another unit and it still did it. So this leads me to believe its not a MSP programming issue.

Also I wanted to upgrade the hard drive to something bigger. I attempted to burn an image of the original without success. I'm using Apricorn DriveWire and there cloning software. I can burn a working image of my HP Netbook drive but not the 800's drive. Does M have some sort of safeguard to prevent duplicating there terminals? Any suggestion on that as well?

Also what's up with the dual partitions? Does the 800 require that? I remember reading something on the BatBoard about how the 800 and how there not set up not a regular computer, but I couldn't find the post when I went back to review it.

Brad

By default, the MW800 is setup like a regular computer as far as Windows is concerned. The 2nd partition holds all the driver packages and can be used for programs, storage or anything else. There is no type of encryption package such as Guardian Edge, SafeBoot etc that encypt the contents of the drive.

NOW with that being said, if the department or IT department for the town/city/etc did something after delivery, thats something different and can usually be removed doing an FDISK or similar Windows/DOS partitioning program to rearrange the boot sector of the drive.

In MPS, my settings are as follows:

Power Source - 13.8
Turn-off from display - Enable
Critical turn off - enable
igition boot up - power on
igition shut down - none
igition shutdown timer - 3min
power button preference - enable
skip skip skip

For display-
power - 13.8
power off usb command to cpu - engable
critical - enable
power up on usb 5v - no
power up from power button - yes
idle time out - 10 sec
power off on usb 5v absence - no
power off from power button - no
skip skip

Windows power options
Portable/laptop
turn off mon - 2 hrs
turn off hd - 30min
system standby/hibernate - never

advanced - shutdown
- standby

Hibernation - enabled

See how that works.

As long as you have the drivers, there really isn't too much different for the MW than any ther computer. If you can load a fresh copy of XP or XP Tablet and install the drivers, you

should be good.

I talked with my local M dealer today. They did say that I would not be able to duplicate the hard drive as M does put safeguards in place for that. They also told me, here in my area all 800's currently in service are under contract and all of them get shipped back to the depot for any work. They personally don't service them. They only touch them to package and ship back to M as a curtsey to there customers. They seemed more interested in how I got my hands on one than actually helping me...

I'm going to clone my net book and put the drive in the 800 to see what happens. If that doesn't work than I try the fresh install of XP. If that doesn't work Ill just have to deal with the 40 gigs of space until I can educate myself some more and get skilled. This is kind of the trend for me and my HAM projects over the last year. Too much, too soon, too comp lactated for my first year of tin the hobby due lack of personal knowledge, skill and resources.

I'll also duplicate your settings in MPS also. Will let you know how it turns out.

Forgot to add.. your netbook may not work,,,XP in recent SP's (well, always been an issue) does not like to see a complete new set of hardware. You will likely see a message on power up of "missing OS" or something similar.

YEah, there info is incorrect. If you use Norton Ghost, it should work. Other than installing equipment and possibly configuring the data madem, there is nothing that the MSS's do with the MW, ML etc line of data subscriber products. After the MW520's were replaced, the entire data subscriber line became a depot only item for support and repair. Only accessories were availible to be purchased by MSS's or end users.

Hi Brad,

I assume that the MW800 has an original install of XP on it? (from an agency, etc.)

And I'm going to assume that when you start the machine, it does an auto-login?

There are two ways to set that action up, a direct registry key entry or via Group Policy. You should be able to hold down the shift key (if I recall correctly) during the windows loading process and it will take you to the login screen. Then the problem is - you need to know the name of an administrator account and the password.

There are utilities that will boot the machine in an environment that will let you reset the default "administrator" account's password to something you know. Then the shift Key method will let you in to reconfigure the OS.

If you want to reload the OS with a fresh copy, the MW800 supports booting to a usb CD-Rom drive or bootable USB flash drive. If you use a non-brand specific version of XP, it will have all the basic drivers required to get the machine up and running. Then you could load the Motorola (actually Symbol) drivers and go from there.

Kevin

35. ARPS and the MW800. What's your thoughts?

Yahoo group: MW800
Date: 2010-03-08 14:23:07 UTC
From: BH
Topic: 35 Message: 35

So here it is, another Monday. What did you do over the weekend? Well, as for me? I started looking into ARPS and how I could integrate it into the MW800. Now this weekend was really my very first time reading into ARPS and what is does, how it works and so on. I'm thinking that it really shouldn't be that hard to integrate ARPS into my existing MW800. After all, it all ready has a GPS receiver installed in it and Motorola offers a data radio that interfaces with it. The question is getting the data radio to operate on either the 144.390 MHz in VHF or the Proposed: 445.925. in UHF.

Now, I don't know much about the data radios as I never played around with them. I've seen dozens of the VRM's (Vehicle Radio Modem - I think that's the Data radio?) on eBay each month for the last year going very cheep. As long as there was RSS available to change the data radio and it will go outside normal limits, why now?

Have any of you played around with ARPS and the MW800?

Have any of you played around with data radios and mobile data terminals operating on HAM systems?

Would this be an easy fun project to perform at a relatively low cost?

Tell me what you think?

The data radio is useless outside of a DataTAC system and are 800MHz radios. I wouldn't mind grabbing it from you as I need one to place my other MW800 on the FD data system for CAD.

I run UI-View32 on my MW800 and 520. Very easy to do. Buy a copy of GPS Gate and it will slice the data off of the internal GPS and allow you to use the GPS data with multiple programs at the same time. Add a TNC + Radio (or the radios with a built in TNC) and your good to go. If you do a google search of UIView you will come across all sorts of good information.

If you want the best APRS experience, your going to need to buy GPS Gate ($20 I think) and Presicon Mapping verison 8. This will give you street views of where you are as an underlay in UI View. If you can have an internet connection with your MW800 (tethered modem/blackberry etc) you can also get weather radar updates which also show up on the map.

I got a VRM600 if you want it. Model # F2452, ID# 8030A772. with mounting bracket. Don't know if it works, never tested it. It's been collecting dust for a while. I'll shipped it USPS Priority Mail Flat rate. I'll even do a trade too. Just make me an offer and you can have it.

I got a VRM600 if you want it. Model # F2452, ID# 8030A772. with mounting bracket. Don't know if it works, never tested it. It's been collecting dust for a while. I'll shipped it USPS Priority Mail Flat rate. I'll even do a trade too. Just make me an offer and you can have it.

The data radio is useless outside of a DataTAC system and are 800MHz radios. I wouldn't mind grabbing it from you as I need one to place my other MW800 on the FD data system for CAD.

I run UI-View32 on my MW800 and 520. Very easy to do. Buy a copy of GPS Gate and it will slice the data off of the internal GPS and allow you to use the GPS data with multiple programs at the same time. Add a TNC + Radio (or the radios with a built in TNC) and your good to go. If you do a google search of UIView you will come across all sorts of good information.

If you want the best APRS experience, your going to need to buy GPS Gate ($20 I think) and Presicon Mapping verison 8. This will give you street views of where you are as an underlay in UI View. If you can have an internet connection with your MW800 (tethered modem/blackberry etc) you can also get weather radar updates which also show up on the map.

From: bnn485
Topic: 42 Message: 42

Hi Guess

I have a MW800 which I'm trying to "clean out"
I want to install Windows XP on it, and I want to first format the entire computer

can anyone tell me how I can do it, being the MW800 doesn't have a CD Drive
I do have a 16GB Thumb Drive if that can be used, can I put Windows XP on it and use that?
any ideas or help I would greatly appreciate

Thanks!

I tried holding the shift bar down as you suggested. After some period of time the only things that occurred was a DOS window open with a blinking courser. It would not allow me to enter any commands or do anything with it. Once I closed out the window by clicking on the X my desktop icons aperied. They never loaded until the window was closed. The desktop background did however.

I think what Imp going to do is leave it the way it is for now. Than do a fresh install on the new HD in a couple of months once the finances/budget replenishes.

Before you format your drive, consider putting a larger hard drive in it. I found that 40gig just isn't enough. I just picked up a Western
Digital 320gig drive brand new for under a $100 from a local retailer. The only down side to upgrading the drive is you loose out on the heater filament. I don't know if they can be removed from the old drive and replaced on to a new one with out damaging it. I have a couple that I will experiment on just haven't got to it yet.

Hi BH

For what im going to use it, 40 GB is OK versus loosing the heater filament

how would i boot windows XP so i can format it? can i put windows XP on a Thumb Drive? does it have to be a CD Drive connected via USB, does it have to be a Fire Wire Drive?

I believe you should be able to do it all of those ways. When you boot it up, go into the set up screen F12/F2 (I think) and check the boot order. Load it to the way its set up or change the boot order to tell the computer to select the way you are going to use. If that makes sense. I think by default based on what I've been reading it will boot to the USB drive first if it detects something is connected. Prob the best way would be to connect an external CD drive and use the OS disk.

I have not personally loaded an OS on a computer that has not had a internal CD drive. There are several ways some of the other members may have additional suggestions.

I'm looking for the touch screen drivers for an MW800 model F5206A. I didn't see anything in the files section.

Thanks
JAY
KA7MBQ

49. For Sale MW800 model F5206A with FLN3063B monitor, and FLN9890B USB keyboard

Yahoo group: MW800
Date: 2010-03-19 17:12:44 UTC
From: E.
Topic: 49 Message: 49

This is a nice MW800, it has a couple small scratches on the plastic over the monitor, but besides that it's in good shape.

It comes with a 1200 NIT, FLN3063B monitor, the FLN3063A is a 1200 NIT monitor Without Bluetooth, but I don't know if the FLN3063B included has Bluetooth. It also come with a FLN9890B USB keyboard, and a 4' monitor to CPU cable.

It had a start up error after I removed it from my vehicle. It says, Windows couldn't start because the following file

Microsoft says it can be fixed by using a setup CD and using the R when it starts. I don't have a Windows XP CD for this, and now use an Itronix I can take out of the vehicle.

I'm asking $500.00 plus actual shipping costs. Any questions just ask.... Jay

51. Wanted: Internal PRM240 DataTac modem

Yahoo group: MW800
Date: 2010-03-19 17:26:09 UTC
From: Pj
Topic: 35 Message: 51

Looking for an internal PRM240 datatac modem. Need to replace one that failed in a fire truck. Many MW800's came with one, but outside of a public safety network they have no use...hoping that someone here would be willing to part with theirs. I have a spare rubber plug for the person who has a modem!

53. HELP Can't repair XP using USB CD-RW

Yahoo group: MW800
Date: 2010-03-20 13:00:21 UTC
From: E.
Topic: 53 Message: 53

I'm trying to fix a missing System32\DRIVERS\isapnp.sys file in my MW800. I have an original Motorola Windows XP Pro CD, but in the Bios if I choose to boot from the CD-ROM, it doesn't recognize the CD, same if I try to boot from removable devices. The only other BIOs choices are Hard Drive and Intel UNDE, PXE-2.0 (build 082)

Any ideas how to get to repair on the XP CD?

Thanks
Jay

FYI

I believe you need both these files to setup the touch screen.

Super_Savage_Video_Drivers.zip
MW800_Utilities.zip

Keep in mind I only have the later model 7 not the 6 so I am not 100% sure.

Thanks
Sterling

To my knowledge, moto did not. Their dashcam solution is the "digital patroller" IIRC. They have just included a video in as standard equipment since the 520's IIRC.

What would be a good cam to use in the car with the MW800. I've been shopping for a standard used "PD style Cam" but none of them have the BNC connector on it. Didn't want to use a USB web cam or other non rugged cam as I think its kind of cheesy for the application.

I want to hook it up to the MW using the OEM BNC outlet and manually choose to record events or situations in front of the vehicle. The CPU would act as the digital recorder and be able to view it in Media Player or something alone that line. I'm open to other options as long as its not spending 3k on the Mobile Video Enforcer.

The Sony EVI-400 cameras from a Gemini Video system work good with the MW-800. http://home.comcast.net/~d.steinfeld/ebay/EVI400/brochure.pdf I have the pin-outs for power, video and zoom functions. They are made to mount on the windshield with a rear-view mirror mount. I may have some around....

Can I get this antenna with a mini-uhf for the wwan, a SMA for the GPS and a reverse thread for the wlan(wifi) or do I have to use adapters?

Thanks,
Roger

66. MW810 brackets

Yahoo group: MW800
Date: 2010-04-27 01:19:05 UTC
From: bouwhuis2000
Topic: 66 Message: 66

Hi all,
I plan on a large deployment of MW810s into a fire service. Can anyone recommend a mounting solution they've used? I'd likely be mounting to the doghouse, or engine cover in most custom cabs, but some have a space to mount on the passenger(officer) side dash.
Thanks,
Roger

I *think* i've seen a UHF verison, most I have seen are 800MHz or higher. Mine is a 800/Wifi/GPS sharkfin.

go to tessco.com there is a good (not 100% complete) set of multiband antennas there.

All the major console manufactur's have solutions for them. You may end up using different model's/vendors depending on each truck (unless you have a standardized fleet). I am a fan of mounting the CPU under the seat where there is usually a large spot for the CPU and two-way radio - then using the keyboard/monitor only mount. Keep the profile lower and not as tall if using the 3-piece soultions.

Gamber Johnson, Havis, Troy I think all have both sets of mounts. Also call them, as they don't always have everything in the catalog or online. Thats how I found the rockover monitor mounts for the consoles, and the keyboard only tray/arm.

Thanks for the quick reply. Sorry, I didn't need a UHF antenna, just need wifi, dual band cellular, and GPS. Just I need the right connectors. Mini-UHF for the cellular, SMA for GPS, and reverse thread SMA for the wifi.

The Tessco site shows a Sharkfin with 3 SMA connectors, but that's not what the MW810 has...

Well...if you find a good distrubtor, its cheaper! :) My first setup was GJ, and I liked it alot. Prices in general for all the console compaines have gone up a lot in the past few years.

GJ makes the OEM MW800 series mounts, with Lund doing some of the others still.

My Sharking came with all the right connectors. Most of the companies will put on any connector you want. It just comes down to the resellers that will order it for not for you (or want to charge you lots of extra $ to do it).

I can't think of the name at the moment, but there is a company that sells an NMO style antenna that has active GPS in the antenna, along with wifi, 800 (or any other band you want). GPS terminates to a USB plug as its internal to the antenna.

Topic: 5 Message: 76

I don't need a GPS receiver, the MW810s I have come with a dead reckoning inside so I just need an L1 antenna. However, I'd like to replace the three included antennas into one multi-band for wi-fi, cellular and GPS....

That Sharkfin on the Tessco site will probably work. I'll have to cut off the TNC and install a mini-UHF connector to make it work, no biggie.

Thanks for the help,
Roger

I'm happy with the sharkfin. There is supposely one better with gain, the Medallion? comes to mind. I have a buddy in Texas that is installing and is suppose to get back to me. The pics make it look large, but if you see the specs, its actually a smaller footprint...and $10 cheaper.

It is COM3, but change your CPU manager settings from NEMA to TSIP. Don't ask me why, but its backwards.

If it hasn't been played with for awhile, you may want to download the GPS utility from Trimble so that you can set the GPS settings directly. It seems that if it hasn't been used in awhile - or if the memory was corrupted the GPS doesn't like to talk.

To complicate things more, the GPS has two serial ports in the unit.. A&B. One is set for TSIP? input with NMEA output and TSIP in & out on the other. Its agravating, but once its set, you *shouldn't* have to play with it after that. I might have the settings written down somewhere.

At least when your in the trimble software, you can change on what data is sent in the data string, and up the baud rate to 9600 output (which most software these days supports).

In the support section of the iQ page is:

TrimbleStudio_v1-01-07.zip(1168 KB)

TSIP_NMEA_App_Dev_Kit_PDF.zip(341 KB)

FTDI_USB-Serial_Driver(436 KB)

Quick Start Guide - READ ME FIRST(190 KB)

Do I want the TrimbleStudio or the FTDI_USB-Serial_Driver? Thats all that is listed.

Trimble studio is the newest software package out. The alternate would be whatever is listed for the Lassen SKII, which is the older one. It was called a different name.

I can email them tomrrow if I have time..I keep the copies on in the MW, but not here on the network. Eitherway, studio should do the job

If you could email them to me that would be fantastic! I'm looking for something that I don't know anything about so it's going to be difficult. Ill keep looking thought on the Trimble site and if I find them Ill let you know so you don't have to got through the trouble of sending them. Big Thanks!

http://trl.trimble.com/dscgi/ds.py/Get/File-445115/TrimbleStudio_v1-01-07.zip

The software is pretty straight forwards. Again, the only part that will be annoying is setting serial port a or b. One of them has to be output nmea to work, so you may need to reconfigure it a couple of times until your software see's it.

Ok PJ

I've been messing with this all day. I think I'm missing a step somewhere because the Trimble software still won't read the GPS.

What do you mean by setting the serial port a or b? Are you referring to changing the NMEA/TIPS option with in the CPU Configuration Software? Or is there another setting some wear else?

Here's a play by play on what I've been doing:

Open up CPU Manager and Selecting TIPS setting on the GPS. Making sure I still have a green light showing it's on. Save the setting and exit the program. Open up the Trimble software and in the dropdown menu in the center of the window and set it to new configuration. I then select Comm Port 3, NMEA option. The program begins its search and a short time later tells me unable to recognize any device.

I've gone back through and repeated the process with the CPU Configuration Software and re-ran the Trimble software in the same manner stated above. I've even tried some of the other optitions as well and still nothing.

What about drivers. Are there drivers for the GPS? I don't know if there are any installed. I downloaded and installed the device driver that was listed on Trimble's site and re-ran the Trimble Configuration Utility and still nothing.

Now, I don't remember if the GPS unit I have is the smaller or the larger one of the two. I belive it's the newer (smaller) of the two and that's the driver I installed just incase it wasn't all ready there.

What am I missing?

No driver is needed, it communicates as a regualar serial device.

My apoligies, should be COM2, not COM3.

Also, let the trimble software do an automatic find for the gps (should be a checkbox to have it automatically try all bauds and formats).

Give that a shot.

I did the automatic find. It ran for the last two hours I got tired of waiting so I shut it down so I can get ready for bed. Is it supposed to run for that long?

Should take no more than one minute. By any strange chance, are you going to Dayton next weekend?

Have you opened up the unit and verified that the actual GPS module is in the CPU? Unlike the 5206 MW800, the connector is not directly attached to the GPS unit.

I would also recommend downloading Xport - its a software serial port data splitter for GPS. At least with that, you can see if there is any data coming in on the command line (I use it to split up data for several GPS enabled programs that run at the same time....and its free).

No cant afford to go to Dayton. I'm having enough of a time trying to pay the rent because I've been out of work since September.

I have open up the case and there is a GPS unit installed. The MW I have came from local police department that was downsizing there fleet. The unit was hardly used and and had the hard drive refreshed. The tech I got it from doesn't and cant tell me much about the servicing of it as there M rep just sent it to the depot for servicing. So I don't really know if its actually working or not.

Ill try downloading and installing the program you recommended and let you know how it turns out.

Hi iam Pascal from the netherlands.
I do not own an MW800 GPU but an MW800 8inch touchscreen only.

Just wanted to say hello and excuses not to introduce myself first:) and already poking around with qeustions.

My interest is for using the Touchscreen for a PC other that mw800 GPU because i do not own one (YET), maybe i will.

Well thats it for now.

Volunteer Moderator Needed!

Hello every one I am looking for at least one but possibly two persons who would be interested in becoming a volunteer moderator for our MW800 group. I'm trying to get back into government contract work overseas, so if that happens I will need some help with managing the forum. It most likely will involve taking over the approval of new members and maybe some other basic related duties of our group.

The "work load" so to speak will depend on my deployment and the availability of communications were I end up. Our group is small as its only been up for a couple of months so there's not really much to do. Right now, on a busy week, I spend about 15 minutes total receiving and approving new member's request. The words getting out and were are getting more who are interested, but its really not a big or though job.

So, if you're interested and willing to volunteer your time contact me via email at WA8IQO@... and well discuess it.

Thanks for your consideration...

Hi,

I already have the screen up and running, everything's Works even under windows 7

Works like a charm.

I have aprox 11 cases brand new Motorola Mw800 8.4 inch screens + 3 meter battery cable and 3 meter vga/usb +mic+sound cable

All new in unopened packaging.

Any interests?

Regards

Pascal

Yeah my boxes are including the First cable(FKN8217A)

I have 11 brand new packings for sale

Only problem is I am in the Netherlands

What is this screen doing in the USA for price?

Box contains:

Screen 8.4 inch

Cable FKN8217A display to cpu cable(5mtr)

Cable FKN8090A standard pc to MW800 display(0.5mtr)

chargeguard

Whit this you can connect it to normal pc and works like a charm.

Works with XP and vista and Windows 7

Tested by myself.

Regards

pascal

There were a couple on ebay a few months back that were going for around $60 if I recall correctly. I don't think they sold since the market for these is pretty small. It was for the screen only. Not many agencies bought this size screen..as they are smaller than even the MW520 screens and were SVGA vs the usual XGA screens that modern CAD software is going to.

I would be interested in a small screen for the right price. I think it would make a good second monitor for the rear area of a command vehicle.

I agree that there¡¦s not much of a market for them here in the US. I watch eBay like it¡¦s my second job. Well ok more like my first job since I¡¦m unemployed, but that¡¦s beside the point. ☐º

I see just about every new MW800 Item that pops up on eBay and I can say in the last year I have only seen one. I believe it was around Christmas and I think it was selling from Canada but was shipping to the US. I didn¡¦t pay in much attendition as I thought it was a miss print in the listing. Didn¡¦t know it the real deal till a week after it ended. Turns out it never sold, even with a Buy It Now of $100 USD.

Offering up a MW800 F5206 system.

Details (subject to double checking, but should be accurate)

MW800 CPU - F5206
512MB RAM (upgradable to 1GB)
80GB HD
Internal WiFI
Internal GPS
12in SVGA Touchscreen
MW800 Keyboard
Display cable
The unit has had the 1076FSB cold weather fix performed

Serious offers only. If you have a CF29 or CF30 toughbook, or ML900/ML910 laptop..I'd be willing to work out a trade of some sort depending on the unit.

For those of you using GPS with the MW (or any other computer for that matter) there are two software programs that I recommend using.

GPSgate - will take your incoming NMEA data and output it to Google Earth, Garmin data format, and a few other ways. It will create multiple virtual serial ports so that you can run multiple GPS enabled programs at the same time using one GPS device. Pay software.

Xport - Xport is similar to GPS gate but will only support NMEA and a limited number of virtal serial ports. HOWEVER, I find that its very effecient and helps eliminate conficts that some GPS software creates when they run together. Don't ask me why, but some just don't like to play nice. Software is free!

Personally, I am using xport for my NMEA devices and it feeds GPS gate which feeds my Garmin software and google earth. Works like a charm.

You should be able to increase the size via the usual windows display properties. However, it only increases the windows desktop, not the resoultion. MW800's only come in SVGA and XGA resolutions.

I am having a problem with the screen images on three of these units. All seem to have the primary display permanently fixed at 800X600 60hz which is way too small to run our report writing program that requires 1028X768 any suggestions?

You should be able to increase the size via the usual windows display properties. However, it only increases the windows desktop, not the resoultion. MW800's only come in SVGA and XGA resolutions.

Correct..you cannot exceed the size of what the display can support.

128. MW-800 for sale, complete

Yahoo group: MW800
Date: 2010-07-22 20:06:34 UTC
From: packy41
Topic: 128 Message: 128

I have my spare F5206 MW-800 for sale. Had a deal pending but fell through so its back up again.

F5206 CPU
512MB RAM (upgradable to 1GB with PC2100 memory)
80GB Hard Drive (has the heater FSB performed)
Current MW800 Firmware
Internal factory Trimble GPS
Internal WiFI B/G
FLN3062 Display, touchscreen
Keyboard
Display cable (6ft?)

Does not include the power cables (standard Motorola $5 power cables, two needed)

PC Card and rear rubber cover for the datamodem are present.

I'll leave the Garmin Mobile PC software on it. Complete set of MW800 software/drivers will be on the D partition.

Unit was cycled thru the depot about a year ago.

Make resonable offer. I am looking for a Panasonic CF-18/19/29/30 toughbook for travel and will consider a straight trade depending on specs.

129. OT: ML900 parts needed

Yahoo group: MW800
Date: 2010-08-16 00:28:51 UTC
From: packy41
Topic: 129 Message: 129

Looking for any parts/accessories for a Motorola ML900 laptop. Please email me direct if you have anything.

Thanks
Pj

130. WTB: PRM240 internal modem

Yahoo group: MW800
Date: 2010-08-18 18:24:43 UTC
From: packy41
Topic: 130 Message: 130

If anyone has a MW800 with the internal DataTAC modem (would have an antenna port where it says WWAN) I am looking for one, possibly two. I need to replace one that died on me.

131. MW800 back up for sale (dumbass faceplant issue fixed) :)

Yahoo group: MW800
Date: 2010-08-22 23:46:40 UTC
From: packy41
Topic: 131 Message: 131

Ok, so I was a dumbass and didn't connect something that I forgot to look for. My MW is back at 100% and is again for sale.

Details should be back at this group message:

http://tech.groups.yahoo.com/group/MW800/message/107

132. FS: MW-800 F5206 P4 1.7GHz, internal Wifi, internal GPS - 80GB

Yahoo group: MW800
Date: 2010-08-24 19:58:13 UTC
From: packy41
Topic: 132 Message: 132

For sale - Cross posted in other groups/boards:

MW800 CPU F5206 1.7GHz CPU
512MB RAM (upgradable to 1GB)
80GB HD
Internal GPS
Internal WiFI (B/G)
Rear USB x1, USB x2 on display
Firewire, 10/100LAN port
Serial Port, AUX connector (For additional inputs, remote on/off, etc)
Rear audio, 50 OHM Video input
Support for two MW800 Displays
SVGA Touchscreen Display with internal speakers
USB MW800 backlit Keyboard

CPU has the FSB HD heater upgrade so it will work in cold winter weather. Power cables are not included (two needed) but are the standard issue motorola two prong connector (spectra, CDM, MCS, astro's, etc and are dirt cheap).

Serious offers only. Again, I am looking for similar specs in a Panasonic Toughbook CF29/30/19 or a Motorola ML900/910.

Please email me with offers - packy41@... - Paypal accepted wirh +3% of total cost/shipping, bank checks/USPS MO ok when cleared by the bank.

Display (has small scuff mark, but not seen when on)
http://i514.photobucket.com/albums/t343/PJH76/For%20Sale/DSC03695.jpg

Rear of CPU (wifi antenna port is actually back in - standard wifi connector)
http://i514.photobucket.com/albums/t343/PJH76/For%20Sale/DSC03694.jpg

Keyboard

A friend of Batlabs has a MW800 Display/keyboard and looks like CPU all in one stand for sale.

It appears to be an OEM/Lund model which was a VAR option when purchasing the unit new. Lund makes/made many of the different styles for the entire MW line.

He can be reached at rod.farva@...

I posted two supplied pics of it in the photo's section under "For Sale"

Topic: 137 Message: 138

There was never a big demand for those cables, so finding one used is going to be a big shot in the dark. They were mostly used by radio shops for testing the cpu's, etc.

Unfortunatly, that part number has been canceled. There is a VERY slim chance that there is inventory somewhere at Motorola, so it won't hurt to call parts ID and ask them (might take a supervisor) to check the real time inventory.

In the past that sometimes works, but most likely they will say they do not have any.

Date: 2010-10-25 16:33:38 UTC
From: packy41
Topic: 143 Message: 143

Cross posted to here as some people own both..

I have yet again the following equipment for sale:

1 MW520 CPU F5205 (P3/500MHz). 20GB HD with heater, 128MB RAM. All screws/covers running XP SP3

1 MW520 backlit/red keyboard

2 MW520 toplit/amber keyboards

2 MW520 High bright/VGA touchscreens

2 MW520 Keyboard/monitor mounts (Lund I believe)

Make a resonable offer for all or one (prefer all, but whatever gets these out of the basement). Paypal accepted. Shipping USPS flat rate unless otherwise requested.

144. Internal APRS Equipped MW800 CPU - Your Input is encouraged!

Yahoo group: MW800
Date: 2010-11-17 19:47:32 UTC
From: WA8IQO
Topic: 144 Message: 144

Ok everyone I'm starting to plan a new project. Everyone's input is encouraged.

I have wanted to play with APRS gear for a while. I'm really anal on clean minimal equipment installations (see my installation photos published with in the Photos section) , so here's my "Plan A" for integrating the technology into my MW800.

(Step 1) I'm going to go with the 5-Watt VHF Transceiver with Integrated Tracker2 from Argent Data: https://www.argentdata.com/catalog/product_info.php?cPath=22&products_id=112&osCsid=7427ccaebe8bd2a1b845d4f5013fb8a4

(Step 2) I haven't got it yet but, I want to put it in the MW800 5207-CPU were the WLAN card normally would go. I would remove it from its case. This should make it small enough to fit the space. I would have to tap power from the inside of the CPU. Any Ideas were? I'm thinking directly from the two pin power feed port.

(Step 3) Route data from the Trackers DB9 port and tap into the internal DB9 connection on the CPU board. Any one have a pinout for this?

(Step 4) I would then route the antenna connection out of the CPU through the original WLAN antenna hole by making a pigtail using OEM connecters to keep the integrity of the unit and for quick access and repair.

Sounds simple right?

Other lame-brain ideas (Feel free to give me your 2 cents)

I've also been considering playing around with an old Seria Wireless USB WiFi card from Sprint and also mounting it within the CPU as well. But I don't think there's room for both. The APRS gear would take preference as my current MiFi card supports the car and other family members in the household.

Additionally been thinking about mounting a Bluetooth Dongle in the monitor via direct solder to the board. Now some of you would ask why not just plug it in an open USP port? Well, that would be the simple thing to do, but I don't want to loose the port as I have other gear planed for them nor do I want a bunch of unsightly port duplicators lingering around. I also want to eventually get the Pentax Pocketjet printer and Swip Card reader mounted on the back of the monitor so that would make three ports needed if you include the all ready installed keyboard.

I'm assuming you mean where the Datatac modem would be vs the mini-PCI WIFI card :)

You could tap off of the main buss...but with both together..I wouldn't do it. The MW800 was designed around the 800MHz packet data transmitter. The internal RF shielding was designed for that (at 2? watts). VHF transmitters, that small...and especially ham ones are nortorisly noisy and you very well may nuke the computer with the leakage.

> (Step 3) Route data from the Trackers DB9 port and tap into
> the internal DB9 connection on the CPU board. Any one have a
> pinout for this?

The DB9 (and that entire connector set) is all on one board..then connected to the motherboard with a massive connector. There are no publically available manuals to figure out what is going where.

There are plenty of custom cable makers out there, not too hard to do. I've had custom wifi and gps interconnects made in the past for these.

You won't get any usable signal. Pick up a mini-PCI wireless card and use that. There are a bunch of them out there on ebay for $5. The Intel 2200 is the OEM for the 5207.

The display is a bitch to open and disassemble properly. I've talked to the depot guys and they don't even like to play with them, and they are extremely tight on space. If you can get your hands on the OEM bluetooth board (somewhere I have a part number but don't think its orderable) its a plug in board in the display (somewhere).

I use a remote head radio (ICOM) with the radio buried in the center console. I run the serial cable the TNC in the same location. I also run a mini-bluetooth dongle on the rear of the CPU to a mini-hub that tucks neatly between the cpu and mounting bracket. Off of that I run a usb to serial cable, WinTV and something else. The rear ports are USB2.0, the display (at least mine) is 1.1.

As nice as your idea is, I think you have an extremely high chance of smoking the computer.

148. Re: Internal APRS Equipped MW800 CPU - Your Input is encouraged!

Yahoo group: MW800

From: WA8IQO
Topic: 144 Message: 148

Well...

Not interested in smoking the computer, I'm too much in love with it. So I'll rethink it and consider plan "B". If anyone know the part number for the Bluetooth board I give mother M a call and see if its an order-able part. If not Ill just put the $20 dongle in an available USB port. Unless anyone out there has a non-working Bluetooth equipped monitor they want to part out? I should just save myself the headache and use the dongle anyways.

Buts were's the fun in that! LoL

Moderator, Thanks for adding me. Hey members. I just picked up a 5206 and a MW520 at a gov. surplus auction. I have most of the stuff on the MW800-5206 figured out and and have it working in the house. Once I get it all set, it will go in my truck. The MW520 looks like it won't even sell well on eBay so, it is just going in storage for now. If I have any questions, I will lay them out for the experts here. Thanks again for letting me hang out with you guys.

150. Modify Boot Sequence

Yahoo group: MW800
Date: 2010-12-15 14:30:25 UTC
From: christinecorn
Topic: 150 Message: 150

Is there a specific key to use when trying to modify the boot sequence? We, unfortunately, still have some units running Windows 2000 and these units crash often. I usually repair windows but I always have to change the boot sequence to begin with the CD. But, to get there I have no idea what I do. I've tried F5, Delete, F8, ESC. Nothing works by itself....the only thing that seems to work is me hitting every key on the keyboard and then magically it gets to the BIOS screen (which is stupid). Anyone know if there is a specific key or combo of keys for these units?

Topic: 150 Message: 151

I just ran into this... F2 gets you into the BIOS (start hitting the key after the keyboard light comes on). Short of that...I want to say F10. Its one of the F keys that will bring up a boot menu (at least on the F5217 model).

I currently have 9 full units that I am in the process of getting the operating system and drivers loaded up. All units are 5206 models with 1G memory (will be verified once OS is loaded), 40G hard drive (a few have factory 80G hard drives), Video, W-Lan, Serial, Firewire, Aux, 2 video ports. No GPS or Wifi (at this time. Monitor and Keyboard also included. All you will need is power for the CPU and power for the monitor.

Will come with a complete mounting kit for the monitor and keyboard as well as a mounting bracket for the CPU.

Prices start at $800 for the 40G units one they are up and working, $850 for the 80G units.

159. Motorola ML900 parts for sale

Yahoo group: MW800
Date: 2011-01-13 18:22:19 UTC
From: packy41
Topic: 159 Message: 159

Little off topic...but here it goes:

I have a disassembed P4 ML900 laptop. Believed to be operational, but I cannot guarentee it. May be good for parts or reassembly (which I will do if I can find some free time).

-P4 ML900 motherboard with GPS installed
-12.1" touchscreen with RF antenna and WIFI antenna
-ML900 case with port covers (and screws)
-Backlit rubberized keyboard

I am missing the bottom cover that goes over the HD area. No CD driver, RAM (PC2100), hard drive, wifi card (Standard mini-PCI), battery or AC adapter.

Make offer for all or parts.

161. To All Group Members

Yahoo group: MW800
Date: 2011-01-17 17:03:59 UTC
From: WA8IQO
Topic: 161 Message: 161

Hello everyone!

I posted some new Polls the other day and I see some of you have all ready taken the time in casting your votes.

I wanted to take a moment to thank those of you who have all ready voted and incurrage those of you who have not, to do so

I posted these polls in hopes of (1) Generating more user participation and (2) Allowing each member to identify him/herself and what capacity he/she wishes to participate in the forums. Hopefully those of you who have not posted any comments yet will feel more incurraged to so knowing that "X" number of members can help you in a specific topic.

Personally for me, I glad to see members who are here specifically to help and share their knowledge with others. This is one of the main reasons I started this group. Thank you! As always, if you have a idea or suggestion for a topic of discussion please feel free to post it!

Lets keep the ideas and conversation flowing.

162. Group File Updates!

Yahoo group: MW800
Date: 2011-01-18 17:25:12 UTC
From: WA8IQO
Topic: 162 Message: 162

Attention Members!

I have been working to clean up, update and remove documents from the file section of the group as we are now using close to 70% of our allotted space. I have several new files for the MW810's too upload. Once this is done, it may put us close to or even over the alloted storage space. I will have to see how it goes...

Due to this fact, I will be changing the the permissions on uploading files. New uploads will now require moderator approval. I'm hopping this will eliminate duplicate items as there was a lot. Also I found a Virus contained in file located in: "Files > MW800 Documents - Sales & Marketing". It has been removed and there should be no other issues with it.

Also, should the MW810 files push the limit of our storage capacity I will remove the "MW800/810 Documents - Sales & Marketing" files if everyone is OK with it? I don't think many of us here are looking for that type of information and it is available elsewhere. If I'm wrong please voice your opinion.

I will all-ways have theses documents stored locally on my home network so they will always be available if you cant find them elsewhere. Just shoot me an email.

163. CPU CodePlug

Yahoo group: MW800
Date: 2011-01-20 02:53:24 UTC
From: James
Topic: 163 Message: 163

I can't get the CPU CodePlug to load. I am able to open the MPS application and open the CodePlug editor. In there, I can read, edit and write the Display CodePlug to the EC. However, When I click "Read from CPU EC" I get an error message "Read Operation Failed". I have no idea where to even start to look for a copy of the CodePlug saved on the computer. I can't find anything in the help area. Anyone who can give me a hand would be my best friend for a day.

Thanks
James

You are correct. It is a standard pc microphone with a threaded tip. The MW810 R1.2 does NOT have a threaded mic jack however. The microphone is actually the style like the ones that come with hands free cell phone kits. Clips on the visor or a trim piece.

The mic jack is also MONO not stereo.

Kb9kst and I were talking the other day. The 5206 does not use mps but another program called codeplug manager. That is what you are looking for. There is also another program that will run that will show the mw temp, allow you to turn on a datatac radio/GPS/ on off (if equipped). Ill see if I can get it uploaded.

With some remote help from another member, we discovered, I was missing several drivers that I had missed installing. After that, it was some clicking around before he determined that it was an issue with the com port being set to the wrong port to read from the EC. With that corrected, we were able to get in, read the Codeplug, edit it and put it back on the EC.

From: packy41
Topic: 182 Message: 182

Propertyroom.com has had some surplus MW800's lately, and going fairly cheap. I picked up two units from them, one happened to be a F5206, the other a F5207. Both had factory wifi and GPS. Both were in excellent condition.

If you haven't been there, they run an ebay style auction, however if someone bids towards the end of the auction, it bumps up the end time by about 2-5mins or so. Also shipping isn't the cheapest at times, but hey, if you get it really cheap then its worth it.

183. Cable Pinouts and related stuff

Yahoo group: MW800
Date: 2011-05-04 03:38:50 UTC
From: Steve S
Topic: 183 Message: 183

Does anyone have a secondary display (12.1") cable for the F5207? I think I have figured out most of the cable using the tables in the installation guide, but would really like to either get a factory cable or have one to check the connections on.

The cable would be an FKN8307, FKN8337 or FKN8306. I have not checked with Motorola yet...

Has anyone found a pinout for the connector inside the F5207 where the internal data radio connects (com 3)? I think it would be nice to be able to bring that serial port out of the computer.

Thanks
Steve

Hello Mike

The back lighting on the key board to my knowledge is not user controllably. The back lighting come on automatically when the computer is turned on. It should than turn off after a cretin amount of inactivity time and than turn back on with any key stroke.

If you back lighting is not working than your keyboard is not working correctly. This is typically one of the the first things that go bad on the keyboard.

Welcome to the group!

Thanks for the information, I'll have to check on the back-lighting to see if I can verify it's functional or not. the only other issue I have is the keyboard mouse pad function occasionally freezes for a few seconds or so, I think it may be because the PC is not a MW800, I'm running a Compaq Presario in the garage. It's not very bad just mildly annoying at times. I'm using the PC for PDF manuals and such.

Is there a Schematic diagram available for the keyboard? I'm thinking If I can isolate the back-lighting circuitry I can try to manually activate it. if it's dead then it kind of defeats the reason for getting it to begin with.

Press and hold the combination of keys and clean the pad with windex or similar cleaning materials. There are no special drivers etc for thus keyboard. It is a normal usb keyboard and mouse.

Left/right should be intensity and up/down for keyboard backlight timeout (1min to always on I think).

Short of a problem, the sticky mouse is usually a windows deal or dirty trackpad. There are no known publically available service manuals for the MW800 units.

Thanks for the information, I cleaned the pad and it is working better. I still have an issue with the backlighting though and will have to open the keyboard up and see what's what.

193. Microphone Input Troubles

Yahoo group: MW800
Date: 2011-06-04 03:03:15 UTC
From: WA8IQO
Topic: 193 Message: 193

I got a Motorola cell phone visor clip mic as shown in the photo section of the group. Its a new old stock item with a 1.5mm jack. I went to Radio Shack and purchased a 1.5mm to 2.5mm conversion adapter. It fits just as it should. Both the microphone and the adapter are mono.

Question #1: Can anyone tell me if the mic input on the back of the CPU on the MW800 is Mono or Stereo? I'm assuming it's mono because stereo just doesn't make sense to me.

I'm not getting any voice pick up from the mic. All I'm able to pickup is the alternator wine from the vehicle. I don't have a second mic "yet" to swap out to determine if its a faultily microphone or the CPU port. I'm assuming its something different. If I tap on the mic hard the the Microsoft Sound recorder graff fluxes with the corresponding tapping. Additional the graff fluxes with the rev of the vehicle motor.

Question #2: Any suggestions on trouble shooting this issue?

Question #3: Any suggestions on how to filter out the alternator wine?

Have you checked the install manuals? They have a diagram of the connector. Remember you have to get the type that screws in. If you don't. It won't go in as far as it should.

And I was looking at the manuals and found something very interesting. The receptacle is stereo for both the 5206 and 5207/17. However they show different connections for the IN between the two models which if a stereo plug would render it useless on one of the models.

Let me know if you have the manuals. I am pretty sure you do.

Good to hear I'm not the only still breathing.

Never got the the mic issues resolved. I was considering swapping out the CPU's stereo plug with a mono plug from the SHACK to get it to will work with what mic's I have. However the CPU is under the passenger seat and its been so hot (in the 90's) here in Michigan I just haven't wanted to spend the few hours out in the sun on the project. Pulse, I recently got a ASTRO Saber and ASTRO Spectra so I've be enjoying playing around with the CPS. It beats the old DOS RSS and I'm tickled pink with the ASTRO stuff so far.

As far as the MVE go's...

I started my own K9 contracting business and have been doing search work for a wide verity of public and private services including law enforcement. I have my personal vehicle (now my work vehicle) equipped specifically for the dog. It just makes senses to have the MVE capabilities for response and on scene documentation purposes for liability issues. I chose the MVE because (1) its Motorola (2) it interfaces with the MW800 (3) it seams simpler that the other brands and I just like the way it looks...

I did receive one response and we're working out a very respectable deal. I may still need a DVR for the system but I'll know more tomorrow. Hopefully I won't as it will save me some money and the headache of hunting for something I may not find.

There are also some that have bluetooth intergrated in with the wifi, but I don't believe they will work properly in the MW (but I have never tried it). You can usually find these on ebay.

Your best bet is to find one with an antenna connector on it (usually its a MCX? plug) and then find a dealer that makes a MCX? to RP-SMA cable to bring a jack out to case for an external connection...otherwise unless your using it in a house, your not going to get any real signal (obvisouly). Now if your using it a vehicle behind/under a seat and using it with a MIFI or similar setup for internet, then you could be good to go.

There is a dealer out of San Diego (I think) where I had some custom cables made a couple of years back, but I don't recall their name. It worked out to be $15-$20 a cable or so (for qty 1 each) but they were made extermely well. Do a google search of "custom RF cables" and you should be able to find some dealers.

205. For Sale or Trade

Yahoo group: MW800
Date: 2011-07-07 05:04:50 UTC
From: WA8IQO
Topic: 205 Message: 205

For Sale or Trade: 48" Whelen 9M with Arrow Strobe and Whelen ISP188's w/warranties.

Quantity 1: 48" Whelen Edge 9M ☐ Custom

4 - Front Strobes (Red)
2 - Rear Strobes (Red)
6 - Rear Strobe Traffic Adviser (Amber)
1 - 3M Opticom Emitter
1 - California Red
2 - Takedowns
2 - Alley Lights
Permanent Mounting Feet
Aprox. 14ft of cabling.

No specific asking price, as I will consider all reasonable offers ☐ How every add about $50 Shipping/Packaging for delivery. To be honest with you, I don't know what this bar is worth. I know, I put a lot into it three years ago. It was bought new from Gall's. I added the Arrow Strobe, California Red, using all new OEM Parts. This is not a hacked up back yard bar. All said and done I've got about $1200 into it.

The Opticom power supply (Removed ☐ Available as individual sale/trade) comes from an external mount unit that has been removed from the enclosure in order to be placed in the bar. The emitter head is a standard 400 Series head.

The arrow strobe is four wire low current controlled. Right, Left, Center out, center in, flash one, flash two - and I think more but I never used them. There are additional patterns based on the selection or combination of wires. For Example if you combine Right and Left you get Center Out ect. I've got the MFG's paperwork on the Arrow Strobe power supply. If I get a chance I try to dig it up and post the model numbers. I know its not a power supply Whelen advertises and I had to call them a special order it.

The bar doesn't take a special switch box. All function were controlled with a standard Unitroal Touchmaster TM4. The bar has internal relays/matrix board for low current switching. It's only been used about six months. It doesn't need new lenses they are in "like new condition" right now. It has not been exposed to Michigan Winters and used in the summer only.

Quantity 9: Whelen ISP188 Strobe Power Supplies, Refurbished w/factory warranties

I have nine Factory Refurbished Whelen ISP188 power supplies in factory sealed boxes. All come with 90 Day factory warranties with original parts bag and paperwork. Available for $399 ea. (USPS Priority Mail shipping included in price / Quanity Discount Available) or submit your best offer.

☐ Eight Outlets
☐ Input Voltage: 12 volts (24 volts optional)
☐ Input Current: 18 amps
☐ Input Power: 230 watts
☐ Total Output Energy: 72 joules on each light head for 180 Watt total.

☐ Dimensions: 2.35" H x 6.75" W x 9.14" D
☐ Weight: 5 lbs
☐ Programmable Configurations for DOT
☐ 17 Flash Patterns:
1. CometFlash®
2. TripleFlash☐
3. MicroBurst III☐
4. MicroBurst II☐
5. Sequential
6. ModuFlash☐
7. Rapid Random
8. DoubleFlash
9. 2X CometFlash®
10. 2X DoubleFlash
11. 1/2 Rapid Random
12. 2X ModuFlash☐
13. 2X Sequential
14. 2X MicroBurst II☐
15. 2X MicroBurst III☐
16. 2X TripleFlash☐
17. TRAFFIC ADVISOR☐ Patterns
A. Left Sweep
B. Right Sweep
C. Split Sweep
D. Alternating Flash
*Diagnostic Indicator Kit Not Included

Offers for Trade ☐ What I'm looking for.

(1) Quantity 16 - New, Whelen Twist-Loc Strobes for the older style 52 Series Light heads.

(2) Quantity 8 - New, Whelen 52 Series "optic" light head lenses, clear.

(3) Quantity 1 - New or Used, K9 Door Popper System

(4) Quantity 8 - Hide-A-Way Strobe Tubes. Manufacture not important, but must be able to accept 22.5 watt (72 joules) power input.

(5) Quantity 1 - New (Preferred) or Used, Motorola DVR unit for Mobile Video Enforcer model number DLN6588A.

(6) Quantity 1 - Troy Products face plate # FP-MNYCON for a Motorola ASTRO Saber AVA Convertacom part number NTN7227D

Hate to be the one with the bad news, but even new, your not going to get anywhere close to that for the ISP188's. I know people who have had new/like new who couldn't even get $200 for them privately or on ebay. Same with the bars...not too many people are looking for strobe bars for the price(s) that they really should be.

Took me awhile, and at a loss... to sell my Edge Ultra 14 strobe/led/duplex led arrow with duplex takedowns and alley lights.

My suggestion would be to check out elightbars.org and put what you want in the for sale section there, or at least to ask for guesstimate pricing.

You could prob do very well over there for a complete opticom system though.

THANKS GUYS!!!!!!

Right now I'm using an older linksys pc card. it works but it hands out of the slot and has no antenna.

--- In MW800@yahoogroups.com, Pj <packy41@...> wrote:
>
> There are also some that have bluetooth intergrated in with the wifi, but I don't believe they will work properly in the MW (but I have never tried it). You can usually find these on ebay.
>
> Your best bet is to find one with an antenna connector on it (usually its a MCX? plug) and then find a dealer that makes a MCX? to RP-SMA cable to bring a jack out to case for an external connection...otherwise unless your using it in a house, your not going to get any real signal (obvisouly). Now if your using it a vehicle behind/under a seat and using it with a MIFI or similar setup for internet, then you could be good to go.
>
> There is a dealer out of San Diego (I think) where I had some custom cables made a couple of years back, but I don't recall their name. It worked out to be $15-$20 a cable or so (for qty 1 each) but they were made extermely well. Do a google search of "custom RF cables" and you should be able to find some dealers.

What model display do you have? What model MW800 do you have? What video driver are you using and where did you get it from?

I'm using the following:

Display model-FLN3062A
CPU model- F5206A
Video driver/Display adapter- S3 Graphics Supersavage IXC

Im pretty sure I got the drivers off of this site but i have the disk that came with the unit. MW800 support kit.

Yeah, if you would do that, it would be great. We use dispatching software, and reporting software that are not displaying properly because of this issue. I think I may have the wrong driver installed. If you could help me, that would be great.

Just let me know when you are available.

3062 is a SVGA screen, not a XGA screen...so the settings would be correct.

Basically yes. I know it won't support true 1024x786, but wondered if maybe there was a program to simulate 1024x786 on a 800x600 screen.

Some drivers will do a "scrolling" screen and I *think* I've seen it on a mw800 but really not worth it. Your best bet is to wait until you see a xga screen on eBay.

I saw 1 that worked, 2 that were not tested, and a complete workstation for like 499.00. last couple of months. Nothing now.

236. Finding the right display

Yahoo group: MW800
Date: 2011-08-15 23:00:00 UTC
From: ccso1123
Topic: 236 Message: 236

Is there any way that someone can tell me what the specs on this display are?

FLN3062B

I cant seem to find any useful information on this particular model.
Any help would be great.

3062B iirc is just a revision of the same display, but should not be bluetooth. There were only a few display out there with BT and had completely different model number IIRC.

241. Motorola model numbers

Yahoo group: MW800
Date: 2011-08-16 01:32:03 UTC
From: packy41
Topic: 241 Message: 241

For those who don't know, Motorola adds a suffix to each part/model number when they make a change. It could be a different supplier, a modification or whatever. The underlying product is still the same.

Example: FLN1234A ->First release, FLN1234B ->Revision
FLN1234A and FLN1234B are the same thing.

FLN1234A and FLN1235A -> Can be two completely different products (not always, but can be).

IIRC, 3062 is a SVGA display, 3063 is a XGA display.

I had a bluetooth display and I think it was in the 15xx series.

242. FS: Motorola ASTRO Spectra VHF 100 Watts

Yahoo group: MW800
Date: 2011-09-08 19:27:28 UTC
From: packy41
Topic: 242 Message: 242

Didn't realize I brought my other radio with me when I moved, so going to resetup another office radio. With that being said, I am ONLY going to be selling my spare radio drawer. I powered it up 10min ago and took out my old programming and just put in some test channels. Speaks analog and P25 to my APX7000 and speaks/displays the correct ID's in P25 and MDC1200 both ways.

What you are going to get:

Motorola ASTRO Spectra VHF 100 watt radio, setup for a W7 control head.
Missing mounting tray (Can be found on ebay or else where if you were going to use the internal mounting holes)

Nothing else

I do have some encryption modules that I can dig up (DES-XL, DES-OFB, DVP-XL) for an additional cost if I can find them. I'll program the first 16 channels if needed. Any more or something complicated we can talk about. Not going to program any trunking channels, so don't ask.

Host 8.15.x
DSP 6.04.09

Flashcode information:

Decoding Flashcode: 599108-145E00-0
Platform: Astro Spectra

G806: ASTRO IMBE Digital Operation
G114: Enhanced Digital ID Display
G101: Repeater Access
G298: Hardware Multikey Encryption w/ OTAR
G170: Trunked Remote Monitor/Radio Trace
G683: Trunked One Touch Status Message
G51: SmartZone Systems Operation
G352: User Definable Soft ID
W947: Packet Data Interface
G387: Conventional Voting Scan
G173: SmartZone Omnilink MultiZone Operation
G182: Radio Control Protocol

I don't believe this is a 2.5k radio, but with that being said.. the radio takes the 2.5k programming and tx/rx audio sounds fine talking to an APX7000 in analog and digital...so take that for what its worth.

Shipping will be your choice as your going to pay for it from 82001. I think this will fit in a USPS flat rate box.

PM me with offers, Paypal accepted.

243. FLN3262A Monitor

248. MW810 Checking Interest

Yahoo group: MW800
Date: 2011-09-12 16:01:33 UTC
From: Jason Rasmussen
Topic: 243 Message: 248

I have a MW810 R1.2 that I am thinking of parting with. I bought this brand new. It has BT, WIFI, GPS and I added the cabling to add WWAN. The dealer cost on this was over $6000 and it’s a year old. It may have actually been the first R1.2 models to come off the line as the serial is very low. This is the current model sold by Motorola.

This will not be cheap!!!

Email me and we can discuss it.

Thanks

Jason

Jason , just out of curiosity , I have 2 new ones in the factory box
still with all the packings and discs.. What did you think yours is worth?
Also have 3 nice MW800s that have usual scratches, would be interested
in offers on those as well.

252. FS: Motorola ML900 for parts

Yahoo group: MW800
Date: 2011-09-16 20:40:51 UTC
From: packy41
Topic: 252 Message: 252

I have a parts laptop, pretty much complete. I took it apart for some reason months ago (I think to upgrade the GPS unit) but never got around to it due to a move.

What you will get:
Motorola ML900 1.7GHz model
Touchscreen
Factory GPS on system board
Wifi/GPS/WWAN antenna in the display
Rubber backlit keyboard
Bag of screws, covers, etc

Currently disassemled but will be placed back together (unscrewed) for shipping.

No HD caddy or bottom covers (unless I can find the box they are in, but unlikely due to work commitments)

There was one person interested in this, but not have heard from him in some time. Please email with offers/interest. This is ready to go.

253. Emergency Key

Yahoo group: MW800

Where have you researched? The key is mapped differently just like the mw520.

I searched the net high and low, I have a stack of manuals for different models (and none of them mention anything about configuring it), I have a couple of utility CDs and nothing is on them. I know it is configured differently, but just don't know how.

It has been my understanding that the emergency button can not be reprogrammed for any other use other than what its was intended to do. I have talked with several reliably sources over the years who confirm this. Many have have try ed... Many have failed...

One person told me a few months back that the button has its own MDC control board in the monitor I can not confirm or denies this as I don't have a downer monator the dissect.

Best of luck to ya... I'll be looking forward to hearing what you find out.

Also, Please look at our file section and if you have some manuals that you don't see listed please feel free to make a contribution to the group and upload some. Or at the least provide a list of what you have and how you can be reached.

I don't have many myself and would be interested in some. Feel free to contact me directly.

I have the SCAN codes for the MW520, but again, the emergency key couldn't be found. IIRC, the SCAN codes are "extended F keys", and the emergency one has some really funky code that no one has basically seen. In short, unless you really good into programming and decompling software and recompliling to incorporate it into the software you want to use, your out of luck.

Would be nice to use it, but again, since the days of the MW520, it hasn't been discovered. Only software that I am personally aware of recongizing it is TxMEssenger and PremierCAD.

258. FS: Motorola MW800 with Wifi and GPS complete

Yahoo group: MW800
Date: 2011-09-23 01:05:58 UTC
From: packy41
Topic: 258 Message: 258

For sale is one Motorola MW800 setup. This includes:

[b]Motorola MW800 F5207 CPU with:[/b]
-1.8 GHz CPU
-512MB RAM (upgradable to 1GB with standard laptop RAM)*
-40GB HD*
-Factory internal WIFI B/G (replaceable)
-Factory internal Trimble GPS
-1 Cardbus slot in front
-1 SIM card slot in front
-BNC Video input
-10/100 LAN port
-Two USB ports
-1 Firewire port
-audio in/out
-9pin serial port
-Two display outs

[b]Display[/b]
-12.1in Touchscreen, highbright 1200NIT
-Two USB ports (one used for the keyboard)
-Internal BT capable if you can source the board (USB based)
-8 programmable softkeys
-Display cable

[b]USB backlit keyboard with touchpad[/b]

[b]Motorola VRM650 modem[/b]

All you need are the standard Motorola style power cords for each unit. Shipping via your meathod, but USPS is the best way for me, and I think it will fit into one large USPS box. MW800 is loaded with a factory fresh OS/drivers so its ready to go. [b]*[/b]This may have a 80GB HD and 1GB of RAM, but I need to fire it back up to double check, so until I get the time to do that, figure the figures stated above. CPU has the OEM Windows XP key, and this uses standard laptop memory and laptop IDE drive. Paypal or USPS Money Order accpeted

I have a couple of pics posted up at radioreference:
http://www.radioreference.com/apps/classifieds/showproduct.php/product/3348

$500 plus actual shipping.

263. Power Cord/Adapter

Yahoo group: MW800
Date: 2011-10-18 02:48:48 UTC
From: actexas972
Topic: 263 Message: 263

Hello,

Thank you for allowing me to join this group. I am a full-time police officer for a large department in Texas. We have used the Motorola MW800 (and others) for awhile and i've taken an interest in them.

I purchased an MW800 from eBay recently and it has arrived with what I believe is all the necessary components and cords with the EXCEPTION of power cables.

The CPU is a F5206A and the monitor is a FLN3062A. Each require a power cord I don't have and can't find. It looks like it might be a generic type attachment, but I don't know the correct term for it or where I could get it from.

It appears there is a bare metal piece sticking out (male) which is round and a black rubber (female) end also sticking out. Could someone please help? Again, thank you for your time and I look forward to learning from all of you.

Adam

eBay. Search for "Motorola power cable" "spectra power cable" etc. They are actually quite common. May also be known as the low power or kid power radio power cable. The same power cable is used by:

Spectra
Astro spectra
Xtl series
CDM series
Radius/maxtrac
Mcs2000

Etc

There is a company in Florida that makes aftermarket ones as well. But the name escapes me at the moment.

Ok good news!

I found a company here in the US that makes hard drive heaters. There claiming "we should" have one that fits my needs. But, I need some information from you guys... They are requesting the following:

(1) the physical size of the heater
(2) required wattage
(3) input voltage

They also say if they don't have them in stock, they can custom make them... ? We'll see.

Also if anyone can provide a pic's of a hard drive with the heater attached and the terminal point of connection and so fourth, it would make the inventory search easier. I will send the pic's to the rep for location of the right ones.

Help me out?

279. FS: Motorola ML900 loaded

Lookng for resonable offers on the following unit:

ML900-NOA Laptop
1.8GHz CPU
1GB of RAM (upgradable to 2)
13.3IN XGA Touchscreen
Internal GPS
Internal Bluetooth
Internal Wifi
Internal CDMA/GSM adapter board for Sierra Wireless modems
Backlit Rubber Keyboard
Fingerprint Reader
IR Port
2 USB 2.0 ports
1 PC Card Slot
1 10/100 port
1 Modem port
1 Video Out
1 Video In
1 9pin serial port
1 Docking port
1 Audio in/out port(s)
1 Power Supply

This is the most maxed out ML900 that you can buy new or used. All the options are on board. All covers. Make REASONALBE offer, need a quick sale to pick up a Christmas Gift for the wife.

I also have another ML900-NOA with the following:

1.8GHz CPU
2GB of RAM (upgradable to 2)
12.1IN XGA Touchscreen
Internal GPS
Internal Wifi
Internal PRM240 Datatac modem
Backlit Rubber Keyboard
Fingerprint Reader
IR Port
2 USB 2.0 ports
1 PC Card Slot
1 10/100 port
1 Modem port
1 Video Out
1 Video In
1 9pin serial port

1 Docking port
1 Audio in/out port(s)
1 Power Supply

I can add bluetooth for an addition $20 (my cost).

I was a Motorola tech for a 2-way shop many years ago, and then went to work for a utility. Worked on non-Motorola MDTs there but I am retired now.

Looking to buy a MW-800 if I can get the vRCH software for it.

Rod

I believe we have the VRCH in the file section of group. However it only works with the MCS 2000 and not the ASTRO Spectra.

Im assuming your looking to use it with the Spectra as that is what your note said in your request to join our group.

If you got money right now for your MW800 purchase there are dozens on ebay right now that are complet and ready to go.

There are even some that have buy it nows for under $100. I may pick some up myself to have for parts.

Actually it will work with the astro spectra. Should be a menu option for it. If not the spectra settings should work

I always thought VrCH could use many improvements and Motorola dumped it.

Yes it works with the astro spectra however it resets the volume to zero
each time you start the program.

Yup that is correct, they actually made a special rib for it, very small and compact but a regular rib works as well.

If memory serves me right, up to 4 radios can be connected.

You referring to the standard programming RIB and cable?

Interfaced just as if your were reading/writing a code plug?

Well, that's kinda simple?

Does it have to be the OEM RIB or will the aftermarkets work?

It seams like it would be kinda cool to load CPS on the MDT and be able to program on the FLY... Transmitting the radio doesn't screw up the RIB/MDT?

Sounds interesting. Have you used the setup? Is it worth trying out or does it have more issues than its worth?

Standard programming setup. How well it works depends on how good it was made. Motorola made a mini-rib years back that Jason mentioned but has been nla for over 5 years if not 10.

So if you use good quality cables and rib shouldn't have a problem other than figuring out how your going to keep power to the rib box.

291. MW800 5217 coming up for sale

Yahoo group: MW800
Date: 2012-01-06 18:26:38 UTC
From: packy41
Topic: 291 Message: 291

Listing this early in case there is any interest...and posting here prior to ebay and batlabs.

My personal MW800, fully optioned unit. Presently still in my vehicle byut will be taking it out for a MW810 shortly. Unit specs:

MW800 Model F5217
1.8GHz CPU
1GB RAM
80 (or 120 will check) HD with heater
XGA 12.1" High bright display with factory Bluetooth
UBLOX Dead rec GPS with differental GPS (much better than the Trimble iq)
Wifi B/G
PRM-240 Datatac modem
USB 2.0 on the rear CPU (three ports)
USB 1.1 on the display (two ports)
3 10/100 LAN
2 9pin serial ports
PC Card with SIM slot
USB Motorola keyboard
17ft display cable
CPU mouting bracket

Unit will be reimaged to factory. Display is clean and non-scratched except for the extreme upper right where two weeks ago I accidenty banged it into the keyboard. Minor surface scratch that cannot be seen when on and not really noticable when off. The screen was replaecd by Motorola about two years ago so its sweet. All you would need are two standard motorola power cables for it.

A pic of the rear or the unit can be found by going to batboard.batlabs.com, scroll to compter help fourm, then the MW800 product post.

As you can tell I would like a decent amount of cash for this, but feel free to throw me offers. Cash, bank money order and paypal accepted. I also have two loaded ML900 laptops (12" and 13" screens) coming up as well.

From: Pj
Topic: 292 Message: 292

I have for sale from my collection a fully optioned ML900-NOA laptop.

Specs:

1.8GHz Intel CPU
2GB RAM
80GB HD with HD heater
XGA (1024x768) Touchscreen display
Internal Trimble iQ GPS
Internal Intel 2200BG WIFI (Mini-PCI so its upgradable)
Internal Bluetooth
Fingerprint Reader
Backlit rubberized keyboard
PC Card slot
DVD Drive
PRM-240 DataTAC modem
1 9pin serial port
2 USB2.0 ports
1 10/100 LAN port
1 Modem port
1 Video in port
1 docking station port
1 DVI Video out port
Audio in/out ports
All covers
Power supply

Software:
Windows XP SP3 with updated to 12/1/2011
Zip file of all drivers from the Motorola site
Valid Windows XP Key on bottom of unit
Motorola TX Messenger
Motorola Virtual Radio Control Head
Garmin Mobile PC
xPort GPS data splitter
xPort on screen GPS/OBD display software (really cool if you have a bluetooth OBD reader)
Trimble Studio GPS configuration software

Battery doesn't really hold a charge, but uses the EMC-202 battery which can be found on eBay or elsewhere.

I accept cash, bank checks and paypal. Buyer pays actual USPS shipping. Asking price is $350 or best offer. Unit is as-is, where is. Pics are from 1/5/2012 of actual unit.

Topic: 296 Message: 297

In the full install package, there should be a pdf in the "datatac" folder, but don't expect too much extra information than you can click and play with when its installed. The documentation wasn't/isn't that great. Somewhere buried in Batlabs (circa 2005?) a few people played and mapped out a bunch of stuff.

I could be wrong, been awhile since I thumbed thru it but I'll upload the pdf shortly.

The program shouldn't be MW520 specific, as I have installed it on a few different computers over the years. There is an installer and setup? program and running one over the other sometimes gets around the "Cannot install" thing some people run into.

I don't have a full featured original file. All I have is the (1) AUTORUN (2) INSTALLER (3) UVSL and (4) VRCHSETUP files.

I went on BatLabs and searched "VRCH" and "Vertical Radio Control Head" and nothing came up. Can you give some ideas on what keywords to use? or do you think the info has been purged?

I the vrch in the links section under MW800 Driver Download. I had to download either oneof the .iso files and make a CD. It allowed me to install vrch v1.3.5.1. I will upload the .pdf from the program files directory.

Hi, do you have the setup files for the mw800? If so I would love a copy! The docs are in the setup folde once you install it. I have the mw520 ver but it will only work on the mw520. Let me know. Thanks a million!

From: packy41
Topic: 310 Message: 310

I may give up my MW810 for the right price.

This is a NEW IN BOX/NEVER INSTALLED Motorola MW810 Revision 1.1. Its currently on my workbench as I have been customizing my software on it.

For the right price, this could be yours. Quick specs:

12.1 in high bright touchscreen display with 3 USB2.0 ports
1.66GHz Dual Core CPU
4GB of RAM
320GB HD
Internal Trimble iQ GPS
Internal Wifi with dual diversity antenna's
Internal Sierra Wireless MC5720 CDMA 3G Sprint WWAN card
2 USB2.0, 1 9pin, 1 aux port on CPU
Keyboard
Display Cable
All documentation/drivers/software/orignal box
Windows XP and Windows Vista OEM CD's

Think alot of cash for this unit. Serious offers only.

I have a lead on something I wanted, otherwise this will go in the truck in a couple of weeks.

Really not all that hard. You do have the take the main board off and then pull out the cpu card (the side where the fans are). Biggest thing is to carefully remove the wire harnesses without pulling a wire out of a connector or the such as they are thin. Esstentially you need to disassemble the entire computer. Not hard, just don't lose the few screws that are in there and pay attention to what RF/GPS/etc need to be removed before removing the main board.

IIRC, a couple need nuts removed.

Will take a single PC2100 laptop 1GB stick.

Enjoy!

(If your really nimble, you might be able to unclip the ram module, but clearence is so tight you might not be able to remove it or properly reposition the new one to get it to set in right).

317. MW800 video/data cable help needed

Yahoo group: MW800
Date: 2012-01-21 04:36:55 UTC
From: bama4sale@rocketmail.com
Topic: 317 Message: 317

Hello everyone-
I am a newbie to this group, but thought I would introduce myself. I am a police officer in Mobile Alabama, and have taken an interest in the mw800 system. Recently, I started buying a few mw800 parts off ebay in order to build an inexpensive mobile touchscreen computer. I have several mw800 video cables, several usb keyboards, and several mw800 (1200 NIT) monitors. I tried to purchase a fkn8090a laptop to mw800 cable from motorola, and much to my dismay, they are no longer made. I have built 2 computers in the mini ITX format, one using an dual core atom processor, and the other using an i5 processor. I know I am not the first to try this, but my goal is/was to use a motorola mw800 touchscreen monitor and a fast mini ITX desktop in a mobile environment. This cable adaptation seems to be my holdup at this point. I have successfully hacked off the CPU end of the video cable, and hacked off the other end of a VGA cable to take it to my computer. So far, I have video- but have not had the time to attempt the "touchscreen" aspect yet. I have pinouts for VGA, DVI and the primary MW800 monitor, so I feel like it can be done successfully, but was wondering what luck anyone else has had in accomplishing this goal? Does anyone already have a pinout so I dont have to re-invent the wheel? Also, does anyone have the mw800 drivers or "hot button" software to assign the buttons on the bottom of the LCD? Any input, advice or help would be appreciated by anyone that cares to make a comment, an lets get someinformation sharing going on!! Thanks, Stacey

Thanks for the help! Also, it's my understanding that the mw800 uses a resistive 8 wire controlled touch panel. Does anyone know if the controller is in the monitor, or in the CPU? Thanks!

It's within the display. Dont forget that unless you change the mps information in the CPU that it's looking for USB presence in the monitor and that it's usually looking for temp information (ie if the heater should be running or not as part of the hardware protection routines).

You have USB, serial (for the touchscreen), video, audio, and a couple of other I/O things in that cable. I'll have to see what I can dig up, but will be a small challenge.

One resource you might want to try is to contact Gamber Johnson who made the ML900 docking station. Thru the Mods cable you can use a mw800 display with the dock a-la Panasonic pdrc type of setup. Might be able to get Pin outs through them or maybe not.

321. CPU MEM HDD specs

Yahoo group: MW800
Date: 2012-01-25 03:04:57 UTC
From: icbmtech
Topic: 321 Message: 321

has anyone taken photos of the boards from this unit
Like having a photo of the cpu chip and maybe moding a P4 notebook chip into the unit?

Does this mw800 have a 133 or 100 Mhz ram bus ,

does anyone know what kind of Intel chip the CPU is ?

thanks

CPU will depend on the specific model ordered. Most are p4m's iirc.

Memory is pc2100.

CPU is installed on a CPU card next to the fan. Not hard to get out. Just remove the main board and it's right there.

335. MW800 Hard drive enclosure questions

Yahoo group: MW800
Date: 2012-02-03 03:44:12 UTC
From: David
Topic: 335 Message: 335

Hello all,

I have newbie questions about the MW800 hard drive container "enclosure". Are there exploded mechanical drawings / diagrams of the unit?

Was the hard drive container a sealed unit?
Does anyone have one that is opened AND would that someone please post photos of the all one that is open and the internal pieces?

How unobtaninium are the enclosure parts to replace a hard drive in a de-milled removed from service MW-800? For example the cable, caddy, other specific bits, all that is left it the outside box "enclosure" piece.

Would anyone have hard drive enclosure parts for sale and how much would the parts cost?

Thank you for tolerating my stupid questions,
Dave

No offical drawings are available outside of the Motorola depot. No service manual was made available for the MW800. Last i checked, the enclouse was a depot only item which means you need to send the unit to Motorola to get one. This will be at least a $400 service.

The entire unit consists of a seperate shock absorber that is removable that the HD rests in, as well as a standalong HD flex cable and hd heater flex which all ties into the top of the enclosure that mates to the cpu.

In short, if your missing that bottom metal, your not going to get the unit up and going. I believe you can buy the hd flex/heater, but thats not going to look pretty and your not going to properly secure it to the unit unless your doing some redneck engineering.

The MW520, MW800 and MW810 HD units are all different.

I may have a cheap fix.. Go on Craigs List for FL/Tampa Bay, and type in MW800. The Pinellas SunCoast Transit has over 200 of these units for sale. They are only $50.

I bought one and it works fine. Only had to go in and take out all the command boot orders because it was trying to load the AVL program and it was looking for the 800 mHz radio signal.

. EVERYTHING came with it, including mobile mount and a motorola VRM-850. Has GPS and WiFi card and antennas plus hockey puck gps antenna.

Hope this helps. and sorry if any one out there was selling them for $$$$

342. MW810 custom display labels

Yahoo group: MW800
Date: 2012-02-06 19:18:42 UTC
From: Pj
Topic: 335 Message: 342

I have a line for custom MW810 display labels. I need a minimum of 5 people for this to be somewhat cost effective. Each side of the display counts as one label so basically need five people to go in on it.

Please send me an email if your interested. When I get back in front of a normal computer I'll have a guesstimate cost. These will be OEM labels.

343. Video Cabling for MW800 and 810

From: Bryan N
Topic: 343 Message: 343

Hey guys, I'm looking for information on using the MW800 and 810 monitors with devices other than the motorola CPU. My attempts to find the FKN8090A cable have been quite unsuccessful. Does anyone have any other ideas or even a pin diagram for that cable so I can have one made? Also, anyone know if the 800 and 810 use the same video cable?

Also, anyone interested in buying a ton of motorola VRMs?

Subject: [MW800] MW810 Software

Hey Guys,

I finally obtained a used mw810, and would like to program the hotkeys on
the bottom of the monitor. Does anyone have a copy of the original software,
or know where I can get it? Do not need the windows software..... Thanks!

Are you talking about the Field Support Kit? I have the FVN5613C CD.

Field support kit has everything. Most current software is on the symbol site. 5.x.9? Is the most current I think

351. MW800 F5206 help needed

Yahoo group: MW800
Date: 2012-02-25 00:21:44 UTC
From: David Cox
Topic: 347 Message: 351

I recently purchased one of the MW800 F5206 setups from Pinellas Suncoast Transit Authority (which told me that it came from a working environment) and have been trying to get it up and running after finally obtaining all of the cables needed to hook it up. First, let me say what my setup is: In addition to the F5206 CPU I have the 4.5 ft display cable I bought from MOL which came in today along with the two power cables. I also have the 1200NIT 12.1" display without Bluetooth and the backlit keyboard.

Now that we have that out of the way, here is the problem which I'm experiencing:

After hooking everything up with the power turned off, I then flip the switch on the back of the CPU to "on" and apply power to the Ignition sense dongle (which I created using a db15 (+ pin 1 / - pin 12) the CPU and display power up (monitor lights come on, CPU fans start blowing) but, at this point the warning diagram appears on the display depicting that it doesn't detect a signal from the CPU and then after a moment of not recognizing a signal goes black. The connectivity LED shows yellow. At this point nothing else happens. (The CPU fans continue to blow, the display lights stay lit) If you disconnect the display cable, the connectivity LED on the display changes to purple (and when you plug it back in the LED changes back to yellow)

I sure hope that someone has an easy fix and can point out what is wrong because the frustration level is beginning to rise.

Thanks in advance,

David

Have you tried powering up the computer prior to playing with the ign sense? Plugging and unplugging the display cable while running is never a good option.

There are settings via MPS for the ignition line that *might* be affecting power up, but if the fans are going and the display is on I am leaning towards the display cable doa or not completely seated somewhere.

I would also try to find a USB cd drive with a bootable and see if just the oS needs to be reloaded.

I am leaning towards a cable issue. Have you tried it with it plugged into display port 2 as well?

I have the same setup..all I did was hook power to both the 2 reds and 2 blacks from the cpu and the monitor..pressed the power button on the side of the monitor and everything worked.. maybe its the DB connector that is causing the problem by not being hooked up. Also leave the toggle switch on the cpu to the on position.

The CPU will only power up if I apply power to the ignition sense after the toggle is on, and yes, I also tried port 2. I just hooked a usb dvd drive with a win xp cd up and turned everything on…….the drive appears to be “reading” so it’s possible that it’s trying to boot from the cd. Without any other evidence available, I’m also beginning to lean toward the display cable due to the yellow connectivity LED on the display…..which really sucks because it just arrived brand new direct from Motorola today. (I have a MOL account and it cost $65.00)

I sure wish I had access to another cable for troubleshooting purposes……..

Yellow led on during power up an into windows loading is normal.

Simple question.... Have you tried to increase the display brightness?

Yes I did…..the thing about the yellow LED is that the “warning message” logo for “no input signal” comes up for about five seconds when I turn everything on and then the display goes blank as though it gives up on the auto-detect due to no input signal. (similar to you turning a regular desktop monitor on with the desktop computer off when the monitor goes into sleep mode)

I'm shooting for a bad cable or a broken display signal line. I'd see if there is someone here willing to test/borrow/loan a display or CPU to test with.

From what I have gathered, the fl computers all came configured without the ig sense though I am sure some could have (not that it would matter). Easiest first is to get a replacement cable.

I agree…….I wonder if there’s anyone on here located close enough to Baton Rouge, LA to help. The local Motorola dealers don’t mess with them because all of the local agencies use laptops.

I recently purchased one of the MW800 F5206 setups from Pinellas Suncoast Transit Authority (which told me that it came from a working environment) and have been trying to get it up and running after finally obtaining all of the cables needed to hook it up. First, let me say what my setup is: In addition to the F5206 CPU I have the 4.5 ft display cable I bought from MOL which came in today along with the two power cables. I also have the 1200NIT 12.1” display without Bluetooth and the backlit keyboard.

Now that we have that out of the way, here is the problem which I’m experiencing:

After hooking everything up with the power turned off, I then flip the switch on the back of the CPU to “on” and apply power to the Ignition sense dongle (which I created using a db15 (+ pin 1 / - pin 12) the CPU and display power up (monitor lights come on, CPU fans start blowing) but, at this point the warning diagram appears on the display depicting that it doesn’t detect a signal from the CPU and then after a moment of not recognizing a signal goes black. The connectivity LED shows yellow. At this point nothing else happens. (The CPU fans continue to blow, the display lights stay lit) If you disconnect the display cable, the connectivity LED on the display changes to purple (and when you plug it back in the LED changes back to yellow)

I sure hope that someone has an easy fix and can point out what is wrong because the frustration level is beginning to rise.

Thanks in advance,

David

another possibility is that it is hanging up looking for the 800Mhz AVL signal, mine did that and then came to a log in screen for the AVL. I had to delete all the batch files that were added, and replace the XP with a clean copy.

I agree…….I wonder if there’s anyone on here located close enough to Baton Rouge, LA to help. The local Motorola dealers don’t mess with them because all of the local agencies use laptops.

I'm shooting for a bad cable or a broken display signal line. I'd see if there is someone here willing to test/borrow/loan a display or CPU to test with.

From what I have gathered, the fl computers all came configured without the ig sense though I am sure some could have (not that it would matter). Easiest first is to get a replacement cable.

Yes I did…..the thing about the yellow LED is that the “warning message” logo for “no input signal” comes up for about five seconds when I turn everything on and then the display goes blank as though it gives up on the auto-detect due to no input signal. (similar to you

turning a regular desktop monitor on with the desktop computer off when the monitor goes into sleep mode)

From: bama4sale@rocketmail.com
Topic: 360 Message: 360

Hey Guys,

Does anyone know if the MW810 uses notebook memory, or desktop memory?

And where is it located on the cpu?

Thanks, Stacey

Lucky for you, I had a copy on the ML...

System Memory
The CPU has two internal slots for DDR3 memory modules. You can upgrade system memory up to 4GB as follows:

- 1GB PC2-5300/667MHz in one DDR3 slot
- 2GB PC2-5300/667MHz in one DDR3 slot
- 2GB PC2-5300/667MHz in two DDR3 slots (1GB each)
- 4GB PC2-5300/667MHz in two DDR3 slots (2GB each)

FLN3673A (MW810)
ASSY,KYPD,KEYBOARD,USB, BACKLIT,US, MW800-3
Unit of Measure: 1 EA $300

The MW800 specific ones are not showing up in the catalog, but I am sure I can dig up a part number, but the pricing would be about the same.

367. Question MW800

Yahoo group: MW800
Date: 2012-02-25 19:56:13 UTC
From: mw_800
Topic: 367 Message: 367

I recently made purchase of a MW 800 it has the display part number of FLN326A. Mw part F5206A 1.7 processor. Options are as followed serial port, aux port, LAN port, 1 USB port, FireWire, video in, audio out, mic in, power, display1 and display 2 plugged off is w-wan, GPS, W LAN it has a 14 ft cable, no hard drive. It has a serial for windows xp pro. Ok now my questions. I want to add GPS where can I acquire the factory one? What type of hard drive? Do I need a ribbon to connect the hard drive? What size hard drive is max? What is max memory? Is my display 1200 12 inch? Or 8 inch 600? Where can I find windows xp pro and drivers for this unit? What is the best mounting app? I bought it for $51.00 +$35.00 shipping any suggestions how to get a working hard drive and copy of windows drivers to get gps and a running mdt that has an Internet card with wifi?

Thanks

Most can be answered by going to batboard.batlabs.com forums, select the computer/technical fourm and then click on mw800.

Please use some paragraph spacing, makes it easier to reAd what your asking :)

After reading batlabs information, tell us exactly what your looking to accomplish.

I did find that in the owners manual, but it does not say if it's 204 pin or 240 pin. And when is it located in the CPU? A quick cover removal did not readily show any memory slots....
Thanks, Stacey

371. MW800 primer/new members please read

Yahoo group: MW800
Date: 2012-02-26 03:48:46 UTC
From: packy41
Topic: 371 Message: 371

For those new mememberS, I have posted at Batlabs some decent MW800 (and other Motorola computer) information there.

For the MW800, go here:
http://batboard.batlabs.com/viewtopic.php?f=14&t=77615

I don't believe you need to be a member to see it, if not register and you will have access to read it.

Also for the new members, with the exception of the ML900-NOA laptops, 95% of internal MW, ML, PT series computer parts are "Depot Only". You cannot order parts and Motorola requires the unit to be sent to the factory for repair/replacement, and its not cheap. However, for flat rate pricing they tend to replace just about everything inside so at least internally you get a like new CPU/Display/etc for the cost. Flate rate last I checked was $450 or $550.

Parts like the GPS, datatac modems, display cables, internal antenna cables can usually be ordered if you know the part numbers. Interconnect cables and some other parts cannot. Lately it seems like parts ID no longer has reliable resources to identify parts, or their employees just do not know what they are looking at. I've recently been told that part #123456 is not available but after digging around I was able to find it on MOL and order it.

For your information, Mr Packy has had MW800, MW520, ML900, MW810 and a few MW's that you dont know exist, and is one of the most knowledgeable people in this group about Motorola computers. That and he has willingly helped and assited people here all the time. Further more, he wrote the history of them on batlabs.

So with that said you want help, stay, otherwise take the attitude elsewere.

A very big +1.

Or from another angle, or from another angle, if Talley doesn't like the information and help he has been given, how about he takes his own time to tear oen apart and compile all of the information and become a subject matter expert (SME) on the 800.

380. MW800 Hard Drive question.

Yahoo group: MW800
Date: 2012-03-02 05:43:05 UTC
From: David Cox
Topic: 380 Message: 380

Is it possible to install a regular IDE laptop HD in a MW800 HD caddy?

The reason that I ask is because when I took a caddy with a 8 gb HD apart, in addition to the IDE connector, there is an additional piece of ribbon cable that seems to be attached to the circuit board on the HD..... I've got a larger HD that I want to install but don't know what to do about that unusual piece of ribbon cable.

Thanks,

David

Topic: 380 Message: 382

Yes. They use standard 2.5" laptops IDE hard drives. The 2nd cable is the hf heater flex. Try to remove it carefully and reuse it. They are not cheap and if you live in an area that gets snow the CPU will not turn on until the box comes up to temp. If the flex is working the CPU will turn on.

I don't know if yahoo will allow a rename, never tryed...

Im open to possibilities if there is a need. We are all ready at 90 something % of our allowed space. Would you be interested in working on a joint .com for that topic? Do you think there would be a demam for it or would it be redundant compared to what's available on batlabs?

PJ,

Please forgive me, no upset intended whatsoever!!!

I fully support everything I have learned on this group, the MW520 group, and all of the unsung efforts on batlabs too!!! Again, forgive any misgivings, PJ, I meant to cast my vote otherwise, A POSIITIVE in favor of ADDITIONAL information!!! As one who lurks to learn, and only chimes in periodically because I've so little constructive to contribute.....
Dave

I don't know what I could possibly do to help but this forum has been a golden resource for me and I'm in! A full fledged .com resource for info, support & reference would be an excellent one stop shop instead of a 3 or 4 site - bit here piece there forum as we stand now. Even if it was nothing more than a link farm.

I personally like the step by step format and a thread for acquiring a unit and getting it in service would be a godsend as many of us hams are buying surplused MW800s and going mobile. An integration with TNC and UI-View for APRS would be even better!

PJ talked me into getting an MW800 on another forum and from what I can tell it was a good decision. Still waiting on the monitor cable from Motorola and a mounting solution from Havis but this is going to be awesome!

.COM all the way make it a ONE stop shop!

I have been giving it thought and I like PJ's idea about making a site dedicated to all the Motorola MDT's. History of each, technical specs, resources such as documents, drivers and more. Even include a message board for discussion based on terminal models. Kind of a batlabs copy but just for the MDT's

However, ass cool of a site that would be it would be a huge undertaking. Pulse, let me ask everyone, would it be worth it because batlabs all ready has a computer section. Why would people visit another site over batlabs? After all everyone all ready knows about batlabs and they allays check them first?

Maybe our current members who are affiliated with batlabs (you know who you are) could feel them out to see it they would be interested in a joint venture?

After all your right, more and more HAMs are going to MDT usage and it will only grow in popularity as the pricing comes down even more.

Feedback Please?

Brad

392. FS: UBLOX GPS board

Yahoo group: MW800
Date: 2012-03-22 16:32:40 UTC
From: packy41
Topic: 392 Message: 392

I have a UBLOX GPS Jupiter series board that might work with the 5217 MW800 and the MW810 series CPUs. Its not the exact same model as what is used, but has the same pin configuration and footprint that are used. Its a GPS/DGPS board. The GPS engine on the ones used by Motorola is the SBS series (for dead reck) and the one I have is TIM based (GPS/DGPS only).

This may be plug/play or it may not be. I don't know as I haven't tried it since my 810 already has the Trimble unit installed.

Looking for $20 plus USPS flat rate box. Paypal is ok.

I know the UBLOX I have in my 5217 is pretty sweet, just a pain to setup..but once it is the DGPS addition is pretty tight.

I would like to see one specifically geared towards the CPU, Monitor and key board. Showing the features, part identification and so fourth. I do like this one even though it a sales video, its going in the right direction.

I have no video equipment or skills, or I would do one myself. I can run circles around the average Joe when it come to Adobe Photoshop but not with anything like Adobe Premiere...

Last I checked the hard drive cable and heater cable were depot items only. I'll double check on that later tonight. Worse case is you can send it in under flat rate pricing ($400 ish) where everything gets a good going thru at the factory or time and materials with should be an hour of labor plus parts cost. I forget what the hourly rate it but I want to say 85/hr. prob would get the same treatment.

398. f5207a video driver not installing

Yahoo group: MW800
Date: 2012-04-10 16:39:03 UTC
From: icbmtech
Topic: 398 Message: 398

Ok I have tried a lot of things , but the savage driver will not install
it just show a hardware not installed no hardware found.
is there another file to download?
I'm trying to download the mw800 iso however its comming in very slow

Anyone have any ideas as what might be going on ?

nope , I unever found the attachment . however i did get the video drivers to instll from the CD ISO. I did take the mw apart and installed 1gb of ram. That did make a good deal of speed . how ever its stating i'm doing 600Mhz not 1.8 . my install is new and driver all work but the
video capture device. ?!?! that still ststes there is not one detected or wrong driver ?
i see the parts on the mother board i think.
i also see what i think is a transmitter on board in the center surface mounted.

im a hardware hacker at heart and think the motherboard is a traffic nightmare. i did a video as a tip and trick to re-installing the spring ...

hope i can find out the trick to the speed . but i'm running

Again, that's a microsoft thing for the speed. It's running at 1.8. Iirc you have to manually install the video capture driver.

Topic: 414 Message: 414

Hello all,

I just joined and wanted to say hi!

I am the IS Manager for the City of Pasco, WA. We currently have 35 police and 10 fire MW810s in use. We have them scheduled for another 2 years of use, and they have been very reliable for us.

I do have a few questions, which is why i joined, so I will be posting soon!

Thanks
Jesse Rice

415. MW810 heater question

Yahoo group: MW800
Date: 2012-04-19 19:00:44 UTC
From: Jesse Rice - City of Pasco
Topic: 415 Message: 415

Hello all,

I have several MW810 units past my three year warrenty and would like to replace the current hard drives with off the shelf SSD drives. I have purchased one factory ssd unit, but at 450.00 each, i cant justify the cost over the $100.00 off the self unit.

My concern is the heater. I have sucessfully removed one of the heaters with a heat gun and attached it to a test model and it works fine. But I feel like I might take my chances with all 10, and possibly 35 more in the next few months.

Can the heaters be purchase sperately, or better yet the CPU programmed not to monitor if it exists?

We are in a pretty temperate climate, and have never had the units delay due to cold temps, so I think wiht the SSD's we wouldnt even need the heater.

Last option, I am guessing that out of the "5" active traces in the connector, 2 must be used as a look back indicator, so could those be "jumped" to trick the CPU into thinking the heater is present?

I should mention that these 10 are not going in first response vehichles, so I an not overly concerned with this "experiment process" affecting public safety.

Thanks for any info!

Jesse Rice

Welcome. Have at it! When posting, include if it's a 1.0, 1.1 or 1.2 release. 1.2 is the current one with 1.1 being the most common.

Yes, Motorola is still smoking crack

This is where I have an issue on how they designed the MW810's. The previous models (520, 800 and the laptops) would operate without the flex, or would allow the units to boot when the CPU box temp came into operating range. However on the MW810, the unit will not boot at all unless the flex is present AND the temp is in range.

The flex is a depot only item, and cannot be ordered by mere mortals. I recently had to send mine in for a new one as it was out of wack, and thankfully still under warranty. Flat rate is out of control, and time and materials rate will still be as expensive for something so small and really is field repariable. If you are a super large Motorola customer, you might be able to get thru some of the red tape, but don't plan on it. The part number will not even come up with my government account.

For the record, for the proper parts replacement, you will need these:

01013011001 - HDD Flex
7586478J01 - Heater Pad
9287945V04 - Heater Flex

I have also seen these:
8471158Y01 - HDD Heater
9287945V04 - Alternate to above?
8471027Y01_P2 HDD Flex/connector
0188176V41 - Alternate to above?

> We are in a pretty temperate climate, and have never had the
> units delay due to cold temps, so I think wiht the SSD's we
> wouldnt even need the heater.

Correct (my new area goes from the 90's in the summer but down below 0 often in the winter so I am not that fortunate). My educated guess is that the SSD option has some sort of IC

on the connector that tells the CPU to ignore the lack of a heater, but may/still reports a temp. If you are really good at code, there is basic boot/OS in the CPU to allow access to the BIOS and settings, but its beyond me. The the LXE boot? option. If there is a way to disable the temp reporting/lock that way, I don't know. None of the Motorola manuals after the MW520's get that specific and service manuals are not available outside of the depot.

> Last option, I am guessing that out of the "5" active traces
> in the connector, 2 must be used as a look back indicator,
> so could those be "jumped" to trick the CPU into thinking
> the heater is present?

See above, and can't hurt to try. I've had one MW800 that had the factory SSD, and if I can find the pics, I can post them. The housing was somewhat specific to the SSD and I think the SSD/HDD interface was different. I'd love to see how yours came for the 810 if you have it out again sometime.

>
> I should mention that these 10 are not going in first
> response vehichles, so I an not overly concerned with this
> "experiment process" affecting public safety.

I wanted to go SSD myself, but figured that just buying a larger capacity HD (Staples, on sale with coupon for a 320GB WD for $49) was worth it. In all the MW's I have had over the years on back dirt roads and places I shouldn't have been, I've yet to experience a HD failure. Sometimes simple is the best soultion.

I would like to know:

1. what are the two items displayed in the photo?

A. Item # DSMW800IGCABLE
B. The black box just above it with the DB9 Port and what looks like a audio or mic jack attached to it?

2. the part number of the black box?
3. what there estimated MSRP is/was?
4. are they still available from M?

Was its purpose just to amplify audio to an external OEM speaker? Or does
it allow interface to a aftermarket speaker, say the vehicle stereo?

Could you describe the intended setup?

Got an opertuinitey to get some. Want to know if I should grab
them while the grabbing is good or is it not worth the effort.

I didn't run the part number but looks like the auxiliary cable or the ml900 laptop dock cable. There are two versions of the aux cable - one with flying leads and one that termanites to a breakout box.

I've never seen it heard if an audio amp for the 800 but doesn't mean there wasn't one.

Now that I saw it on a larger screen, good question. Does look similar to the ML900 dock cable. When I get home in the morning I'll see what mine looks like to compare. Nothing comes back on MOL with a part description search.

It could be for the 5206 but without a good close up view, who knows. I am basing this on the assumption of te db9/15 looking port.

The 5207/5217 came with the leads or breakout box options for sure.

Pretty much guessing right now.

Hello group on the subject of the db9/db15 black box and speaker i have bought 100 of them new in the box for the motorola mw800 computers i have tested one and hooked up the are an audio amp for the mw800 units 3 fuse links and 1 db-15 and db9 connectors and they are loud they take audio for the mw800 audio out jack from the rear and sends it to the speaker the color code is 3 fuseable links yellow power/system power,orange power for speaker,red main power for both speaker and mw800 options and black non fused open for chassis ground the speaker it self as what im looking at next to me has a audio pot installed on the left side of the speaker part numbers as follows:
speaker:hsn:4035c
gray cable numbers:dsmw800,igcable,hk05/05
the black cable from speaker is or about 30 feet long with a connector in or about the middle for easy disconnect now they WILL NOT work on the motorola mw520 for some odd reason with this hooked up to the mw520 it will not boot at all so i wont not try it i have 100 of these new in the box the box says its an option for the mw800 or newer mobile terminals so any one would like one i will ship 10.00 to ship thanks how this helps

Hello group on the subject of the db9/db15 black box and
speaker i have bought 100 of them new in the box for the motorola mw800
computers i have tested one and hooked up the are an audio amp for the
mw800 units 3 fuse links and 1 db-15 and db9 connectors and they are loud
they take audio for the mw800 audio out jack from the rear and sends it to
the speaker the color code is 3 fuseable links yellow power/system
power,orange power for speaker,red main power for both speaker and mw800
options and black non fused open for chassis ground the speaker it self as
what im looking at next to me has a audio pot installed on the left side
of the speaker part numbers as follows:
speaker:hsn:4035c
gray cable
numbers:dsmw800,igcable,hk05/05
the black cable from speaker is or
about 30 feet long with a connector in or about the middle for easy
disconnect now they WILL NOT work on the motorola mw520 for some odd
reason with this hooked up to the mw520 it will not boot at all so i wont
not try it i have 100 of these new in the box the box says its an option
for the mw800 or newer mobile terminals so any one would like one i will
ship 10.00 to ship thanks how this helps

It could be for the 5206 but without a good close up view, who
knows. I am basing this on the assumption of te db9/15 looking
port.

The 5207/5217 came with the leads or breakout box options for
sure.

Pretty much guessing right now.

Was its purpose just to
amplify audio to an external OEM speaker? Or does
it allow interface to a aftermarket speaker, say the vehicle

stereo?

Could you describe the intended setup?

Got an opertuinitey to get some. Want to know if I
should grab them while the grabbing is good
or is it not worth the effort.

I would like to know:

1. what are the
two items displayed in the photo?

A. Item #
DSMW800IGCABLE
B. The black box just above it
with the DB9 Port and what looks like a audio or
mic jack attached to it?

2. the part number
of the black box?
3. what there estimated MSRP
is/was?
4. are they still available from
M?

Hello group on the subject of the db9/db15 black box and speaker i have bought 100 of them new in the box for the motorola mw800 computers i have tested one and hooked up the are an audio amp for the mw800 units 3 fuse links and 1 db-15 and db9 connectors and they are loud they take audio for the mw800 audio out jack from the rear and sends it to the speaker the color code is 3 fuseable links yellow power/system power,orange power for speaker,red main power for both speaker and mw800 options and black non fused open for chassis ground the speaker it self as what im looking at next to me has a audio pot installed on the left side of the speaker part numbers as follows:
speaker:hsn:4035c
gray cable numbers:dsmw800,igcable,hk05/05
the black cable from speaker is or about 30 feet long with a connector in or about the middle for easy disconnect now they WILL NOT work on the motorola mw520 for some odd reason with this hooked up to the
mw520 it will not boot at all so i wont not try it i have 100 of these new in the box the box says its an option for the mw800 or newer mobile terminals so any one would like one i will ship 10.00 to ship thanks how this helps

It could be for the 5206 but without a good close up view, who knows. I am basing this on the assumption of te db9/15 looking port.

The 5207/5217 came with the leads or breakout box options for sure.

Pretty much guessing right now.

I would like to know:

1. what are the two items displayed in the photo?

A. Item # DSMW800IGCABLE
B. The black box just above it with the DB9 Port and what looks like a audio or mic jack attached to it?

2. the part number of the black box?
3. what there estimated MSRP is/was?
4. are they still available from M?

Topic: 421 Message: 442

Hi Jesse, I would be interested in a couple of those 810's, even if they did not have the CPU or cables with them, but if they were a set, I would like to buy a couple from you, if your a willin. Our agency has one mw800, and I would like to put an mw810 in mine and the other tech guys vehicle. If you interested in selling a couple, or even one, please give me a shout as to how much and exactly what you have. Thanks for your time and consideration, Stacey LHOLT@...

Hi Jesse, I would be interested in a couple of those 810's, even if they did not have the CPU or cables with them, but if they were a set, I would like to buy a couple from you, if your a willin. Our agency has one mw800, and I would like to put an mw810 in mine and the other tech guys vehicle. If you interested in selling a couple, or even one, please give me a shout as to how much and exactly what you have. Thanks for your time and consideration,

It could be for the 5206 but without a good close up view, who knows. I am basing this on the assumption of te db9/15 looking port.

The 5207/5217 came with the leads or breakout box options for sure.

Pretty much guessing right now. Sent from my iPhone

Was its purpose just to amplify audio to an external OEM speaker? Or does it allow interface to a aftermarket speaker, say the vehicle stereo?

Could you describe the intended setup?

Got an opertuinitey to get some. Want to know if I should grab them while the grabbing is good or is it not worth the effort.

446. Re: [MW800] Parts ID Help

Yahoo group: MW800
Date: 2012-04-22 13:20:56 UTC
From: floyd.travis@gmail.com
Topic: 421 Message: 446

I'm interested in an 800 or 810. Would like to upgrade my current 800 monitor to the 1024x768 one.

Thanks

Travis

Hi Jesse, I would be interested in a couple of those 810's, even if they did not have the CPU or cables with them, but if they were a set, I would like to buy a couple from you, if your a willin. Our agency has one mw800, and I would like to put an mw810 in mine and the other tech guys vehicle. If you interested in selling a couple, or even one, please give me a shout as to how much and exactly what you have. Thanks for your time and consideration,

Hello group on the subject of the db9/db15 black box and speaker i have bought 100 of them new in the box for the motorola mw800 computers i have tested one and hooked up the are an audio amp for the mw800 units 3 fuse links and 1 db-15 and db9 connectors and they are loud they take audio for the mw800 audio out jack from the rear and sends it to the speaker the color code is 3 fuseable links yellow power/system power,orange power for speaker,red main power for both speaker and mw800 options and black non fused open for chassis ground the

speaker it self as what im looking at next to me has a audio pot installed on the left side of the speaker part numbers as follows:
speaker:hsn:4035c
gray cable numbers:dsmw800,igcable,hk05/05
the black cable from speaker is or about 30 feet long with a connector in or about the middle for easy disconnect now they WILL NOT work on the motorola mw520 for some odd reason with this hooked up to the
mw520 it will not boot at all so i wont not try it i have 100 of these new in the box the box says its an option for the mw800 or newer mobile terminals so any one would like one i will ship 10.00 to ship thanks how this helps

It could be for the 5206 but without a good close up view, who knows. I am basing this on the assumption of te db9/15 looking port.

The 5207/5217 came with the leads or breakout box options for sure.

Pretty much guessing right now. Sent from my iPhone

Topic: 317 Message: 448

Hey Guys,
I have a question I hope someone out there may know the answer too-
I have an MW800 monitor I wanted to install with a newer computer, and have successfully made a cable to work with a non-Motorola Mini-itx CPU . In this case its a core I5 running windows 7.
After running several of the diagnostics, I have video and audio, and USB active, but still need the touchscreen. Is the touchscreen 8 wire resistive, or 5 wire? Is the touchscreen USB or serial?
Any thoughts of what to try next? I have the pinout for the motorola cable? Maybe the manufacturer touchscreen driver (not moto label).
Thanks, Stacey

Pinout for the DISPLAY 1 connection on the CPU, which is the same 36pin connector as on the display. One could assume they're the same pinouts on the display end but stranger things have happened!

Subject: Re: [MW800] Re: MW800 video/data cable help needed

It's within the display. Dont forget that unless you change the mps information in the CPU that it's looking for USB presence in the monitor and that it's usually looking for temp information (ie if the heater should be running or not as part of the hardware protection routines).

You have USB, serial (for the touchscreen), video, audio, and a couple of other I/O things in that cable. I'll have to see what I can dig up, but will be a small challenge.

One resource you might want to try is to contact Gamber Johnson who made the ML900 docking station. Thru the Mods cable you can use a mw800 display with the dock a-la Panasonic pdrc type of setup. Might be able to get Pin outs through them or maybe not.

From: WA8IQO
Topic: 449 Message: 449

Anyone looking for a large quantity of 5207's?

You can find them on eBay right now from seller knivestoolsandrandomstuff out of Huston Tx. They are being sold in LOTs of 10 for $290 with free shipping. That's $30 each - not a bad deal!

http://www.ebay.com/itm/Lot-of-10x-Motorola-MW-800-MDT-Police-Cruiser-Computers-Model-5207-/251047573086?pt=BI_Security_Fire_Protection&hash=item3a7399f65e#ht_2978wt_932

Anyone looking for a large quantity of 5207's?

You can find them on eBay right now from seller knivestoolsandrandomstuff out of Huston Tx. They are being sold in LOTs of 10 for $290 with free shipping. That's $30 each - not a bad deal!

http://www.ebay.com/itm/Lot-of-10x-Motorola-MW-800-MDT-Police-Cruiser-Computers-Model-5207-/251047573086?pt=BI_Security_Fire_Protection&hash=item3a7399f65e#ht_2978wt_932

Guess its not that good of a deal then...

452. External Speaker

Yahoo group: MW800
Date: 2012-05-01 13:16:27 UTC
From: Jason Rasmussen
Topic: 449 Message: 452

Gang I got the speaker set up from I think it was Jesse (sorry if I got it wrong) but damn.... what a lot of extra stuff for a speaker. It even has a heat sink on it. I have a MW810 and the speaker audio from the display is just fine in my opinion. I don't think I would install the external speaker option. Takes up space, lots of wiring just for a speaker...just not worth it in my opinion.

Jason

453. Display cable info needed

Yahoo group: MW800

From: J C
Topic: 453 Message: 453

Hi All,

I just bought an 800 and I have an issue. The cable (TD 3089863V03)that was sent with it does not appear to fit.
There are two monitor connectors on the CPU, Monitor 1 and Monitor 2. Monitor 1 is the smaller of the two (about 30 pins, Monitor 2 is the larger of the two (about 50 pins). The larger connector is also right-angled. The actual monitor has the smaller 30 pin connector on it. The cable you sent me has the smaller connector on one end and the larger on the other. Obviously, the one end of the cable won't fit at all, but the other end looks to be the right connector, except the rubber on the connector will not allow it to even touch the mating connector on the monitor. It looks to me like an MW-810 cable, because the connector on those monitors appear to be the larger one from the photos that I have seen.

Can anybody help me with this?

Thanks,

Jordan

Look in the photo section of the group under MW800 Identification Images. Compare the photo to what your have. If you have something other than whats in the pic, its not for the 800.

Maybe you received a 520 cable?

Thanks for the info! I couldn't really tell from the photo what size the connector is. I have pretty much figured out that I got an 810 cable rather than an 800 cable. As I said, the one end (right angled) was alot bigger than the other end, and would only mate to the Monitor 2 connector on the CPU. Apparently the 810s use the larger connector for the display, and the smaller one for the CPU and the 800s use the same size connector on each end.

463. MW-800 using a ULI interface for echolink

Yahoo group: MW800
Date: 2012-05-07 22:40:49 UTC
From: J C
Topic: 463 Message: 463

Anybody had any luck using an MW-800 with echolink? I cannot get it to work. I can get Radio to Internet audio and I can get Internet to Radio audio, but not at the same time. When I connect both of my audio lines at the same time, I get a BAD hum/squeal. This is only when I have the "front panel mic" checkbox enabled. Otherwise, I have no Radio to Internet audio at all. I have been all through the settings on windows and echolink. I have reinstalled the audio drivers. I can use a headset with no problem. My interface works fine on my CF28 Toughbook. I thought it may have something to do with a full-duplex setting, but I am starting to think that it may be a compatibility issue. When the The Radio to Internet line is connected to the mic jack on the CPU, the speaker audio changes, almost sounds like the ground and audio HI is reversed, but it is not. I am thinking I may have to go with a USB audio device. I am using mono (Tip and Ring) audio cords, but the audio jacks should be standard. I may make up some stereo cords just to eliminate any question.

Also, As I am sitting here testing, My keyboard will just quit working and light the green lights on caps lock and scroll lock. I then have to unplug the cord from the CPU and plug back in.

Anyone had that happen?

So far, I am not too impressed with this thing. I hope I get these bugs worked out because it is a cool little unit!

Thanks,

Jordan

Te best I can offer is that the MW speakers are too good for human voice. I tried a hard wired car kit using the MW for the speaker phone and no matter what I did, I could not get the mic in an ideal location to avoid the squeal. I never tried, but some windows audio software for echo cancellation or something of the sort might help

465. FS: MW800 F5207

Yahoo group: MW800
Date: 2012-05-26 16:50:08 UTC
From: packy41
Topic: 465 Message: 465

For sale is one Motorola MW800 model F5207A Mobile Workstation.

Unit is a surplus computer and has had the hard drive restored to "out of the box" condition. Shows normal wear and tear but is in good shape. Screen shows very little to no wear when on/off. The top right metal of the housing shows wear due to users folding the screen down, but the actual screen is nice.

Specs:
CPU: F5207A, Pentium 4M 1.8GHz
RAM: 256MB, upgradable to 1GB of PC2100 laptop memory (BIOS says, 256, Windows shows 1GB, so consider that)
Hard Drive: 40GB 2.5" standard laptop IDE drive (you could upgrade with a larger drive if you wish)

2 USB 2.0 ports, 1 firewire, 1 10/100 LAN, 9pin serial port, 2nd display port for dual display, 50 Ohm video in, AUX port for ignition switching - extra USB - 12/5vDC etc (requires Motorola cable), Wifi, GPS, audio in, audio out. All rubber covers for the ports

Internal Intel 2200BG Mini-PCI wifi
Internal Trimble Lassen SQ GPS

FLN3062A 12.1" Color Touchscreen Display with two USB 1.1 ports

MW800 USB Keyboard

Display Cable

Software Installed:
Motorola OEM Windows XP SP3
All Drivers installed, copy of all drivers and documention on HD
Motorola vRCH Radio control software
Motorola Tx Messenger MDT Terminal Software
Garmin Mobile PC GPS Navigation Software (think of a giant Nuvi)
Trimble Studio GPS configuration utility

Following pictures and screen grabs are from the actual unit. Setup does not come with power cables, which uses standard Motorola radio power cables.

Best offer, USPS shipping. Will entertain trades for or towards a XTS5000 VHF M3 radio or XTS4000 in VHF, or Whelen Liberty LED's in Red (extended corners and inners). I will be traveling for the next week and a half but will return PM's as I can. Unit is as-is where-is, but as you can see, it powers up and works as of last night. Paypal is ok, bank checks and USPS money orders are also ok. Local pickup or delivery in northern Colorado/southeast Wyoming and western Nebraska is available.

466. FS: Trimble Lassen iQ OEM GPS for MW800

Yahoo group: MW800
Date: 2012-05-31 00:12:37 UTC
From: packy41
Topic: 466 Message: 466

I have a used/working Trimble Lassen iQ GPS for the F5207 models. If you have an older MW800 F5207 with the SQ, this is a good upgrade. Same size so just unplug one and plug the other one in. This came out of my MW810 when I put a different GPS in.

Make offer. Shipping will be USPS.

467. FS: GPS upgrade for MW800/MW810/ML900/ML910 owners

Yahoo group: MW800
Date: 2012-05-31 00:11:04 UTC
From: packy41
Topic: 467 Message: 467

I am thinking of doing a group buy of the new Trimble Condor GPS modules. I have located a reseller that will sell direct to me.

This GPS units will only work in the MW800 Model F5207, ML900/ML910 and any of the MW810's. *YOU MUST ALREADY HAVE A GPS INSTALLED IN THE MW800 F5207, or ML series AS THIS IS A REPLACEMENT GPS AND NOT THE ENTIRE KIT* If you have a MW810 without a GPS, you can purchase from Motorola the GPS/WWAN board and simply add the GPS and antenna.

The new one replaces the Motorola factory Trimble Lassen SQ or Lassen iQ with a DGPS/SBAS/multi-sat reciever and requires no configuration to NMEA unlike previous models. This is NMEA only output. In other words, when you disconnect power, have a windows issue, no more going in and having to turn off TAIP, TISP, reconfiguring etc. Its ready to go out of the box. I've done some simple testing so far and it seems to operate close to the UBLOX dead rec GPS option, but without spending $450 for it.

I am figuring a cost of $45 a GPS shipped. This will be prepay so I don't get stuck with units after people back out. Paypal or USPS money order is ok.

Please send me an email if you are interested so I can see if we might be able to get any quanity discounts. US sales only.

468. Group Buy - MW810 Bluetooth upgrade

Yahoo group: MW800
Date: 2012-06-01 18:39:34 UTC
From: packy41
Topic: 468 Message: 468

Again, I looking to see if anyone is interested in a group buy of the factory MW810 Bluetooth option.

Cost including shipping will be $80 unless I can get a price break.

This will include the Bluetooth module and the interconnect cable. As far as I know, it will work with all MW810 displays. It does not work with the MW800 displays. Though its a little pricy, it beats using up a USB port for a dongle.

The chip is from Broadcom so will basically work with everything using the WINCOMM software with the MW810 support kit or a download from Broadcom for the current version.

When installed it allows the on/off functionality thru the MW810 CPU manager just like the GPS/WIFI/WWAN options.

Takes about 10mins to install, which most of that is taking the screws off the display and opening it up carefully (only one power cable inside need to be disconnected to remove both sides of the display plastic --- much easier than the MW800 display).

Prepay via Paypal or USPS money order (I am NOT getting stuck with them after putting the money out to order them!)

Please email on/off list with any questions.

469. MW 810 - F5280A Memory Upgrade

Yahoo group: MW800

From: Michael
Topic: 469 Message: 469

I have 11 MW-810's that have 512MB RAM installed. I would like to get them up to 2 GB, but I can't seem to figure out how to access the memory slots. I have taken off the cover, removed the cover for the ports and pulled the accessory board. I have also looked by the Fans. This seems like a lot to get at the memory, I must be missing something. Thanks in advance for any help.

From: WA8IQO
Topic: 471 Message: 471

Hello everyone! I received a message over the weekend from Yahoo that they are changing some of the services pertaining to our group. The message I received is contained below.

Brad WA8IQO

---------- Sat, Jun 30, 2012 at 3:54 PM ----------

Dear User,

Unfortunately, the time has come to say goodbye to Yahoo! Groups Labs Applications (beta) and Groups Chat. We thank all the users that were a part
of this program. We intend to use this learning to enhance Yahoo! Groups further with new features.

On July 04, 2012, we will shut down the Yahoo! Groups Labs Applications (beta) and Groups Chat. We request you to backup any data that you might have
created using the applications.

This closure will not affect your other services on Yahoo! Groups.
We look forward to continue having you as our customer.

Best,
The Yahoo! Groups Team

---------- End of Message ----------

9100's are "dumb terminals". The most you could reprogram would be any internal preformatted forms. If anything, they could make for a good packet station or similar type of text terminal. The comms operate on standard serial connections so that would be your limiting factor. It does not run DOS, Windows or the like.

Somewhere on the web someone had a users manual online. I thought about picking one up for nostaglia sake, but between swapping careers and states, its on the way back burner.

Some on ebay were in really good shape for their age. Several variations were produced.

What is your definition of a "standard computer"? Remember these were made in the late 70's into the 80's.

What I remember being in service in my area, not a complete Motorola catalog. I am pretty sure that I remember taking 9100-T's out of their boxes in around 93-94 and not before, from what I remember it was one of the last if not the last iteration of the 9100. Before that I remember the 9100-386's and previous to that was 9100-10 and 9100-11's. I think that all of the 9100's were late eighties and into the early to mid nineties. Before the MDT-9100 series was the KDT-480 series, which had some different generations, too but I am pretty sure were all still eighties. You'd have to go back to MODAT terminals for the seventies(which is the MDT from the Blues Brothers). I am also kind of thinking that 9100-T's and the 9100-386's were basic computers. They had PCMCIA card slots and that there was a way to get the software to drop down into the operating system.

From: Anthony
Topic: 317 Message: 481

I am currently working on an in car computer. I was successful in "hacking" a MW800 display cable and getting the following to work...

*Video (1024x768)
*Right and Left speakers
*USB

This is where I need help... If I am correct, the monitor uses COM4 to communicate with the CPU. I have an aftermarket 2.8Ghz Core 2DUO that I am using. I sucessfully loaded the Display software,(UTILITY) files and am able to run them. I would like to know what wires in the standard display cables are RS232 Tx & Rx??? I will just use standard pins 2,3 with an external DB9 connector and re-assign the com port to COM4 so the software knows where to look... The $1,000,000 question is what are the Tx & Rx in that cable??

Thanks in advance...

Anthony

Figured it out...NO Tx & Rx lines to RS232 needed.... Only need to hook up the USB wires (twisted pair of grn/wht) to a USB port on the pc, then install the UTILITY files, then after a re-boot the touchscreen will work!! SO will all the features that can be programed into the display as if it were hooked to an MW800 CPU..

Iirc the Bluetooth might be rs233. It's an odd board that uses a USB transport but I believe is actually serial based. The original company that made it has since been bought out once roe twice and the software interface pretty much sucks.

>
> > There are two monitor connectors on the CPU, Monitor 1 and Monitor 2. Monitor 1 is the smaller of the two (about 30 pins, Monitor 2 is the larger of the two (about 50 pins). The larger connector is also right-angled. The actual monitor has the smaller 30 pin connector on it. The cable you sent me has the smaller connector on one end and the larger on the other. Obviously, the one end of the cable won't fit at all, but the other end looks to be the right connector, except the rubber on the connector will not allow it to even touch the mating connector on the monitor. It looks to me like an MW-810 cable, because the connector on those monitors appear to be the larger one from the photos that I have seen.

488. MW810 v2.0?

Yahoo group: MW800
Date: 2012-08-20 21:28:20 UTC
From: WA8IQO
Topic: 488 Message: 488

I've been seeing a lot of marketing from Motorola for a new release of a MW810. APCO 2012 they announced and new MW810 v2.0

Anyone have an information on this? Is this a re-marketed 810 with a new model number or is it really an new version?

I heard through the grape vine some time ago they were getting out of the MDT market. If There releasing a new one, then that tells me there not getting out of it?

Brad

They sent out a link to the new unit, but apparently their web guys haven't updated the site, and I don't see any new information on my side of things yet either. Its kinda like the new LEX700 that half of Motorola keeps saying is available, but its not. Another section of Moto still says Q3, and yet another says Q4 release so who knows...

491. MW800/MW810 GPS upgrade info

Yahoo group: MW800
Date: 2012-08-22 16:53:51 UTC
From: packy41
Topic: 491 Message: 491

Just as a belated update, I did update my MW810 GPS from an iQ to the new Condor C2626 module, and I can say it works pretty well. Only output format is NMEA which is perfect for 99% of all users (no more resetting TSIP back to NMEA with the backup battery dies when its off power).

It supports more sats and DGPS/WAAS features and its basically ready to go out of the back. Drop in replacement.

I can procure a supply of these chips at a cost of about $50/each shipped, but I've had little interest in the past.

This will work in the MW800 F5207 with the installed GPS option, or the MW810 with the GPS/Radio expansion board with the Trimble GPS option. If you have a 5217 or the MW810 with the UBLOX GPS option, this will not work (well, will with the 810 UBLOX but you need to get the retainer clip so the GPS chip wont bounce out).

This will not work with the 5206 as the GPS interface is different.

If you have a MW810 without GPS, you can still add GPS but will require the purchase of the radio/GPS expansion board ($~200 IIRC), antenna cable ($~40 from Motorola) and some mounting screws and GPS mount kit (has the extra screws and hold down retainer plastic). Not impossible, but not cheap - but the only way. The advantage for 810 owners is that you will also gain an addition PCI-E slot.

Hey all...

Found information, data sheets, pictures and more on the new MW800 2.0. I'v added what I have found so far to the folders section labeled "MW800 2.0"

Here are some quick specs to wet your apatite:

MW810 R2.0 Central Processing Unit offers powerful computing options so you can support more applications and find answers faster.

Intel 3rd Generation Core i7-3610QE, Quad Core, 2.3GHz, 6M Cache (Option)

Intel 3rd Generation Core i5-3610ME, Dual Core, 2.7GHz, 3M Cache (Standard)

Intel Celeron B810, Dual Core, 1.6GHz, 2M Cache (Option)

Chipset and Video Controller Intel® Panther Point PCH QM77 with integrated video controller

Internal Memory 4GB DDR3 DRAM 1600MTs Single Slot (Standard).

Expandable to 8 GB Dual Slot Total usable memory may be less, depending on configuration)

Mass Storage Options Heated removable 500GB Hard Drive with 3-dimensional shock absorbers (Standard)

256GB Solid State Drive (Option, instead of Hard Drive)

Also: 64GB internal SSD (mSATA) on main board (Option in addition to, or instead of, removable HD or SSD)

Security and Protection TPM 1.2 (Trusted Platform Module) integrated in CPU Optional internal Smart Card Reader available in 12.1" displays

Operating System Microsoft Windows® 7 Professional, Service Pack 1 (32 bit and 64-bit versions available)

All I got to say is, "My dreams have come true!"

So, based on that and the significant upgrades. Would it be save to say closes to $10k?

If so I think I'll get two for at that price(Sarcasme)!

501. Yahoo! Groups - MW810

Yahoo group: MW800
Date: 2012-09-22 21:58:13 UTC
From: WA8IQO
Topic: 501 Message: 501

Hello evryone!

Some time ago I reserved the MW810 Yahoo! Group site with the intention of moving all 810 related information to its own group.

Well, I've been working for the last couple of hours on moving the 810 specific files and it's just about done. This group will now just contain the MW800 F5206, F5207 and F5217 model specific information.

All information for the MW810 F5208 and the new 2.0 model can be found at http://tech.groups.yahoo.com/group/MW810

Feel free to swing on over and join that group as well. Starting over is a pain in the @%! I know, but if anyone has content to contribute please do...

Brad, WA8IQO

Well, what do you mean by "merge or create/import the groups"? The last discussion I remember was a few months ago when I brought up the topic of creating a dot com for all Motorola mdt's. I don't remember were it left off. I'm still willing to do a dot com, I just don't have the time or money right now to get the ball rolling on that big of a project with out help.

From: sean.blakemore
Topic: 505 Message: 505

Hi,
I'm Sean from Brisbane, Australia. I'm hoping to use a MW800 display for an outdoor application. Seems the screens can be had for amazing value compared to anything else with similar brightness. Hoping to make a cable to connect a standard PC so as I've seen some others already working on this, I'll head over to the Photos/Files section!
Cheers

Topic: 506 Message: 506

Anyone have an idea how to solve the following?

1. FLN3963B monitor that appears to have Bluetooth built-in
2. CodePlug Manager is set to BT enabled, and provides a MAC address for BT
3. Installed Moto's BluePC software, but near final step the installer says there is no supported device

I am stumped as to why it won't see the Bluetooth in the monitor. I'm convinced it has BT as the MAC address for BT in CodePlug editor is hard-coded and read-only.

This is on WinXP.

Thanks in advance for any suggestions!

Everything is done thru bluepc. Even though its Broadcom based, the USB transport thingy actually controls it. Bluetooth on the mw800 was really a disappointment as the software sucks.

I've looked on how to get around it but no go. Their bt works well on the ml900/910/mw810 but just plainly blows on the mw800.

I found using a $10 micro USB dongle from Walmart works better.

509. Heater Optimization in CPU Codeplug

Yahoo group: MW800
Date: 2012-10-08 17:49:59 UTC
From: cheezypoof8948
Topic: 509 Message: 509

Anyone know what I should set the Heater Optimization to in the CPU codeplug? It's currently set to 194 (degrees F ???)

Is there any way to tell if this MW800 box has had the heater cable replaced (re: recall on CPU not turning on in cold weather)?

I'm still toying with WinXP builds on this thing, but I'll find out soon enough since the weather here has now shifted closer to winter. Just wondering if this thing is going to crap out on me since I'm planning to use it as a CarPC and run my stereo with it.

Topic: 509 Message: 510

Set it or default. That number changes when the unit is on. If anything g set it for say 32. You won't know if it has a heater issue until it gets really cold and it won't do a thing until the box warms up.

From: cheezypoof8948
Topic: 511 Message: 511

Anyone been able to get Win7 (any version) to run on a MW800 5207 series?

I have tried several variations, but it always gets hung up at the beginning of the install (BSOD). From what I have gathered, the Win7 installer thinks the MW800 is non-ACPI compliant (which of course it IS). Apparently, Win7 will not install to a non-ACPI capable machine, so it bombs out.

I know I've heard of people running Win7 on the MW800, but they could have been full of it or referred to the wrong model number. I dunno.

Anyone have any suggestions or first-hand experience with this subject?

Anyone know if it is normal for the fans on the side of the MW800 CPU box to not be moving?

I just noticed this is happening on two units that I have. Not sure if I just never noticed this before or if they just stopped. Seems odd to me.

Is this normal (for the fans to not be on) when CPU has just been turned on after resting for awhile (i.e. not hot)?

513. Re: Fans

Yahoo group: MW800

Nevermind. DUH! I just figured out they only come on when the CPU activity or one of the temps gets above some pre-determined level. This thing is so quiet that I was concerned something was wrong, but I finally got the fans to come on so all is well.

From: cheezypoof8948
Topic: 512 Message: 515

After some digging, I have figured out what's going on.

FWIW, here's a somewhat detailed explanation for anyone interested:

I'm using Windows XP SP2. When I built the OS installer (using nLite), I instructed it to set the power management selection to "Minimal Power Management." Well, I thought that means 'minimal management' as in manage it minimally, i.e. let it run full blast all the time.

I have since learned that in WinXP language, this means 'sip power', or in other words throttle down the power required from the CPU and other functions whenever possible. So, for instance when the computer is at idle and not doing much, the CPU load is reduced, fans are turned off, etc. When the CPU load goes up for some reason, it fires up the fans and other resources. There is probably a very slight delay in doing so which - I'm guessing - for some applications could temporarily reduce performance.

After setting this feature to "Always On" (WinXP -> Control Panel -> Power -> Advanced), the fans now stay on all the time.

Is this change worthwhile or should I have just left it alone, since for me this is a Car PC that is mostly idle or working <50% of CPU capacity anyway. I have noticed that in the 'Always On' mode, the CPU and case run a bit cooler in idle. About 4 degrees Fahrenheit each. The harddrive also runs about 2 degrees F cooler. These temps are based on the Moto CPU monitor software.

IMHO, does this really matter? Probably not. As long as the fan comes on when it needs to, I think the way I had it setup before is most likely fine. Incidentally, I've also noticed that in the "Minimal" power mode, the fan comes on when the case temp exceeds 100 degrees F. Not sure about HD temp or CPU temp since the unit is currently sitting in my home office while I test out this and some other features.

516. Harddrive Low Temp

Yahoo group: MW800
Date: 2012-10-17 12:45:45 UTC
From: cheezypoof8948
Topic: 516 Message: 516

I have read about a problem with some MW800 units where they will not boot up in cold weather. I discovered by accident that one hard drive caddy I own had a defective temp indicator. When I took the lid off the caddy, I found someone had removed the temp sensor on the I/O cable.

So far, this drive boots up normally on whatever unit I've tried it. I have not tested it in cold weather yet, but wondering if anyone knows if this is a viable fix for the 'no boot in cold weather' problem on some units.

517. Spare Parts

From: cheezypoof8948
Topic: 517 Message: 517

Anyone need any spare parts?

I have a few of the following:
- 5207A motherboards (main board) and daughter-boards (with CPU)
- Hard drive caddies (complete, including Windows XP COA)
- Some miscellaneous parts such as USB 2.0 plugs from the back of a 5207A

PM me if interested in anything in particular. I am NOT offering complete units. I don't have many, but I have enough to share. :)

FREE. I only request you pay postage for delivery to you.

Brad,

Link does not work. I read about this once before on Batlabs, but from what I understand the Moto Depot discontinued support for the MW800 a few years ago. Not sure if parts are still avail or not.

Dave

There is a copy of the BatLabs article in the file section. Maybe the same one you read.

Yes I do believe you are correct and that Motorola has discontinued support. However, I am not the right guy to confirm that. Some of our other members are Motorola Service Center people or have affiliation with them as part of their daily job. Some will speak up and correct us if we are wrong.

I do believe most parts are available still, but they're going to be an arm and a leg. Ive do some research myself on aftermarket heaters. There are a small handful out there but they wont interface with the monitoring software On company I found could make an exact duplicate of the original but I would have to place an order for hundreds before it went into production. No an option for a hobbyist like myself.

You can call Motorola with the serial number and the FSB number and see if they will accpet it. You can try a sad story, but chances are they will no honor the since long expired FSB. Can't hurt to try. All internal parts are DEPOT only items and mere mortals cannot get them.

Brad,

Thanks. I love these units, especially at a fraction of their original cost. IMHO, even 6-7 years later they are still fantastic for some applications. I have 2 setup as CarPC's and they are perfect for this purpose.

Best Regards,
David

Just updating...

I have 1 spare Trimble GPS including cable to side panel (for external antenna).

I also have several DataTac modems (not sure if they have any value to anyone at all)

I believe thay are different. The 800 and 810 are interchangable but not
with the 520. If I'm wrong someone will let us know...

Sincerely yours,

Brad Hazel

BULLETIN TYPE: Warranty Service

TYPE: Warranty Service
SUBJECT: MW800 Mobile Workstation may not turn on when cold
MODEL / SYSTEM AFFECTED:
F5206A ☐ MW800
F5207A - MW800 W/40GB HD
Units manufactured or shipped prior to April 1, 2008 denoted by serial number prior to 736SJG0000.
SYMPTOM:
If a MW800 Mobile Workstation is in an area where the temperature is cold and drops below the temperature that is programmed into the CPU codeplug, the unit will not power up. The default setting in the MW800 codeplug is 6 degrees C or approx. 43 degrees F. Once the MW800 Mobile Workstation warms up above the temperature threshold, the unit will operate normally.
CAUSE:
A defect in the heater flex of the unit that will not allow the hard drive heater to turn on in order to keep the temperature above the threshold setting in the CPU codeplug.
RESOLUTION:
The heater flex in the MW800 Mobile Workstation will need to be replaced. The unit must be returned to the Motorola for repair: Please ship any defective units to one of the locations listed below:
Motorola Service Center Motorola Service Center
2204 Galvin Drive 8133 Warden Avenue
Elgin, IL 60123 Markham, ON L6G 1B3
Ref: FSB10176 Ref: FSB10176
1-800-227-6772 1-800-543-3222
SEVERITY RECOMMENDATION:
Low - Perform when system exhibits above symptoms
PARTS REQUIRED (HARDWARE/SOFTWARE):
0187506V02 - ASSY,FLEX PCB

LABOR ALLOWANCE

Labor will be provided to authorized servicers under the terms of Motorola's product warranty, Labor Warranty Guidelines or Motorola Service Agreement.

532. Re: GPS Comm Port Help

Yahoo group: MW800

From: cheezypoof8948
Topic: 78 Message: 532

Posting a bit of info to this thread for reference sake....

With a 5207A unit:

- Install the Trimble IQ software (free from Trimble's website)
- Leave your GPS set to NMEA (default) in CPU settings
- Run the iQ software and have it auto-detect Com Port 3

- If auto-detect does not work, the port settings should be 9600-NONE-8-1; or more particularly:

Receiver Port A
Baud Rate 9600
Parity None
Data Bits 8
Stop Bits 1

This should work for the OEM GPS that came with the 5207/5207A

If using Windows XP, Windows Firewall will need be un-blocked if you are using it. If the iQ app sits there forever and seems to be hung, ALT+TAB a bit to see if the Windows Firewall is hiding in the background, and un-block the program.

533. Trimble GPS Files

Yahoo group: MW800
Date: 2012-10-28 15:53:14 UTC
From: cheezypoof8948
Topic: 533 Message: 533

I just uploaded the Trimble GPS app and SDK to the files section (under 5207/5207A files).

I was not able to upload the PDF instruction manual for the Trimble Studio software. Apparently, the file is too large (>5 MB).

Shoot a copy over to me via email. Im keeping everything in a archive that can't be place on the group. That a way I can distributed as needed and I'll have it for when I take the group to a dot com in the future.

Sincerely yours,

Brad - WA8IQO

Ok just took a new mount out of the box and tried to fit the MW800 gear to it. Definitely does not fit. Does not look like you can modify it either.

So anyone want a new MW520 mount for like $80 shipped?

From: motorolaastro
Topic: 536 Message: 536

I currently have a MW800 5206 without gps. I am seeking a few parts to make my installation possible. I would like to make this PC gps so if anyone has a gps module please contact me. In addition searching for a hard drive caddy and a hard drive. I also plan on installing this in a Ford Explorer with a center counsel. Are there any good mounting suggestions? Should I just go in the direction of the mw810? There aren't many in the used market for sale. I have checked eBay and have been unsuccessful. Please anyone some suggestions thank you.

The gps units are after market. You'll just have to make a cable if you don't have/can't find one. We have had some discussion on it here. Look back through the previous post.

Hard drive candies and other 800 parts have been all over eBay the last couple of months. Keep a watch out it will POP back up again.

Good luck on the 810 for now unless your willing to shell out lots of money. You can get the 800 going for a lot less. I would go for the 810 2.0 if you got deep pockets.

I have Exsplorers and Expeditions in our fleet. We use Gamber Johnson vehicle specific floor mounts. Thay bolt directly to the passanger side front seat bolsters in less than five mins. Thay can be used with or with out consoles. We even mount the CPU's to them under the front seat.

Sincerely yours,

Brad Hazel

The MW800 F5206 requires a special version of the Trimble SKII or SK8 GPS. The special part about it is the connector on it. The off the shelf SKII/8 will not work in the MW800.

You should still be able to “double tap” the metro interface…. The only thing questionable would be if the “slide” effect (dragging across the screen like an IPhone) works well….

If I have time tomorrow I might try it. I have access to a volume license key so it won’t cost me any extra to play with it…….

I’ll report back the results/pros/cons once I’m done.

550. Homemade desktop to MW800 display cable attempt.....

Yahoo group: MW800
Date: 2012-11-27 04:33:29 UTC
From: David Cox
Topic: 550 Message: 550

I downloaded the PDF instructions from the files section and attempted to follow it step by step.

I first cut a 12 foot mw800 cable in half and stripped everything back. There were 4 video coaxes (red, blue, green, and grey).

I utilized only the red, green, and blue ones and did nothing with the grey. I took a vga cable and cut it in half (my hands aren't steady enough to solder 15 pin connectors anymore) and used a volt-ohm meter to trace out the correct wires.

1 - red

2 - green

3 - blue

5,6,7,8,10 were all wired to a single ground wire in the vga cable so I connected that to the three video shields (just like the instructions stated except for pins 5 and 10 being grounded....don't know if that affects anything)

13,14 - there were two "loose" wires left in the mw800 cable, one was brown and the other was black. I "assumed" that those are the V-sync and the H-sync wires....(every other unused wire was located in one of two foil wrapped bundles. One foil bundle was where the usb wires were located. I assumed the other foil wrapped bundle was for the speaker wires and the "control buttons")

I located the green and white wires in the mw800 cable (they were bundled with a few other wires and wrapped in foil) and connected those to the green and white wires in a usb male (per the instructions)

At that point I figured a test was in order. I connected 12v to the display and plugged in the mw800 cable to the display and the vga cable into a desktop computer. Nothing..... The display powers up and the "no connection" logo appears for a few seconds and then nothing.....I have swapped those two "probable" V-sync / H-sync wires....still nothing.....

Is there something simple that I missed?

I know that there have been people who have gotten this setup to work (especially since there was a document) so any guidance would be appreciated.

Thanks,

David

551. Need better Crown Victoria bracket....

Yahoo group: MW800
Date: 2012-11-27 17:32:52 UTC
From: rsvpdavid
Topic: 551 Message: 551

Hi all:
I'm new to your list.

I have a 2007 crown victoria with an MW-800 with this setup:

http://www.ebay.com/itm/Brand-New-Motorola-MW-800-Mobile-Computer-System-/300823863571?pt=Desktop_PCs&hash=item460a7fe113

Although this looks like a pretty good deal, it isnt. This setup is NOT compatible with the transmission shift bar in the 2007 CV. To place the vehicle in drive, one must turn the monitor all the way to the left or right and close it all the way. This has become quite annoying.

Can anyone recommend a better bracket setup for the MW-800 in a 2007 CV? Preferable someting that doesnt require moving my radio and AC controls

Bonus points if you have one you can sell me and accept credit card or PayPal.

THANKS!!
david

A few questions?

(1) Is it a police package with no center console?
(2) Are you using an aftermarket console, and what brand and style?
(3) Do you want the computer to remain in the center of the transmission hump?

There are a few different choices. Center console mount, Center pole mount, offset transmission hump mount and swing-out mount that covers you stereo.

Computer mounts and vehicle specific brackets are available from several manufactures. There are pictures of most of the different mounts in the photo section of the group and some different ones in the 810 group.

Stock is limited for the 800 from most manufactures. Luckley most of the 810 mounts will work with the 800. The only differences is they cost more and have a different part number. Some popup on eBay from time to time but finding them used in a compleat package is rear to the best of my knowledge They pretty much last forever. Even after they get old and rusty, For a $100 you can get a good sandblasting and fresh powder coating. At least that's the going rate here in the motor city.

Make a decisions on the style of mount and placement and go from there. If your patient, you should find some used stuff here and there over a few months. If you want new/old stock you may be able to wheel and deal with a manufacture / supplier so they can clean off the shelf - so to speak. Aso try the message boars

Manufactures:

www.*gamberjohnson*.com
www.*havis*.com
http://l*und-industries*.com
www.*cruiserscorp*.com
http://www.*dandrelectronics*.com
http://www.*troyproducts*.com
http://www.elightbars.org (Message Board)

There's another company called SDI. I think Gamber Johnson acquired them but not for sure.

Happy hunting!

Brad

The MW800 keyboard tray, monitor mount is 100% compatiable with the MW810 mount. I want to say the CPU holes are the same as well, but as far as the OEM stuff is concerned it was changed slightly for better cooling of the CPU fans.

From: Matt Carroll
Topic: 554 Message: 555

For several years I used the MW520 in our fleet.
I still have several hundred available if anyone
wants to do a massive bulk purchase of MW520s and their various accessories...

We have been using the same dash mounts as the
MW520 to mount the MW800s we use now. We have to
drill a couple of holes in the display back plate
to make it work, but this does not impact the integrity of the mount.

Otherwise, I have a box about the size of a
fridge loaded with about 100 console mounts
(keyboard tray and display mounts) available. You
can email me at mcarroll@... if you are interested.

Jason tempting as it may be a few thousand might be out of price range at this time having a child on the way. However when you compare apples to oranges the mw800 vs. mw810 they are both awesome workstations. There are many here with so much talent they know these like the back of their hand. I have a very good concept of making good use out of my mw800. I may go for a mw800 with all the possible options. At the end of the day I want the biggest monitor available. All of the available options with the quickest processor. Windows 7 would be a nice add on however it may be buggy? If there are any good suggestions if Win xp pro may be a better solution? I have a few uses for a mobile pc after having it professionally installed by ford so there wont be any electrical issues. My explorer isn't a police version it's civilian so other then looking cool while driving down the road. :-) 1. I would like to have wifi, gps for navigation, 4glte card installed so that I can get internet on the fly. A nice large bright screen and a very large hard drive to store programs. I am going forward with my ham radio test soon and I would also love to use APRS on the mw800. I also plan on using Motorola spectra w9 control head for 2m a w3 for uhf 440 when I figure out how to mod the bands with the rss. So virtual control head would be nice a nice added feature. So in a nut shell I just want a super fast computer I can use for internet, wifi, gps without having to come out of a few grand. I just can't justify a 810 for a few thousand more when it's so close in my opinion to the 800 when you look at the money factor. I can't wait when the 810 hit eBay for a few hundred. Looking forward but don't expect anything soon. :-) Thank you everyone for your insight you are all very helpful and don't think your comments aren't very appreciated.

559. MW800 com ports

Yahoo group: MW800
Date: 2012-12-02 22:27:08 UTC
From: Richard Barnes
Topic: 559 Message: 559

I have a MW800 F5206A that I had to do a full system restore on and now when I install the drivers the com ports come up 3,4,5 and 6 instead of 1,2,3 and 4. The physical com port on the machine does not respond in this configuration and the GPS is unresponsive as well. Incidentally, I do not have the original Motorola disks so I used a standard copy of XP Pro. The machine has the GPS module but no wireless modules.

I have another identical machine that I used double driver on to backup the drivers and restore them to this machine but still does not work.

Any thoughts or ideas appreciated.

Thanks,

Richard

Go into your device manager, drop down the COM ports and under advanced, you can reassign the com port numbers.

Topic: 559 Message: 561

I have actually tried this with no success, granted, I can change the port numbers to 1,2,3,4 but the local com port and the GPS are still not recognizable. I can go into safe mode and the 4 ports do not even show up at all. I thought the native ports would still show in safe mode but now I don't know.

Stumped.

Richard

It's a windows issue, not a hardware one.

Default COM port assignments F5206/F5207:
COM 1 - Hardware serial port 1
COM 2 - Internal GPS
COM 3 - Internal iDEN or PRM240 data modem
COM 4 - Internal connection for the CPU Diagnostic program/MPS codeplug manager. This is the data connection that the Motorola MW800 software uses to change CPU settings, health, etc.

As far as the GPS is concerened, you will most likely have to do a factory reset via the Trimble software. The GPS doesn't like certain power interupptions and may take a few attempts to get it to talk again. They have fixed those problems with the iQ and Condor series.

Topic: 559 Message: 565

Ironically enough, I was using a copy of XP Pro SP3 and dropped back to XP Pro with SP2 and the ports are working as expected now but still cannot access the GPS on either machine. I have tried trimble studio with no luck.

566. MW800 F5206A Ethernet Controller driver missing

Yahoo group: MW800
Date: 2012-12-03 19:05:50 UTC
From: jmiller121
Topic: 566 Message: 566

To all,

I have 3 F5206A MW800's that my (fire) department purchased in 2005. I've replaced the hard drive in all 3 machines. Until now, we've never had a need for the ethernet port, but now we do. However, in Device Manager is shows that the driver for "Ethernet Controller" is missing (and no LAN connection is available in "Network Connections"...) I've downloaded and tried all the drivers listed in the F5206A section (plus the drivers I had saved from before) but no driver is recognized. Wondering if anyone has insight on this...

Thanks
J Miller
Ohio

Download the image disk from the Motorola symbol site. I seem to recall you had to add the driver manually.

Sent from my iPod

I'm assuming by "disk image" you mean an "install disk" (that would have windows on it, etc...) I was not able to find anything like that... Here is the stuff I found... http://support.symbol.com/support/browse.do?WidgetName=BROWSE_PRODUCT&TaxoName=SG_SupportGoals&BROWSE_PRODUCT.isProductTaxonomy=true&BROWSE_PRODUCT.NodeId=SG_MW800_1_2&BROWSE_PRODUCT.thisPageUrl=%2Fproduct%2Fproducts.do&id=m4&BROWSE_PRODUCT.TaxoName=SG_SupportGoals&NodeType=leaf&NodeName=MW800&document=DT_SOFTWARE_1_1&BROWSE_PRODUCT.NodeType=leaf&NodeId=SG_MW800_1_2&AppContext=AC_ProductPage¶m_document=sp

What I'm trying to do is install the drivers manually, but I can't seem to find the drivers to install...

Try this link: https://docs.symbol.com/downloads/F5206A%20Drivers.zip

That is current. You will need to go into device manager, click have disk and then point to some of the driver directories (I don't have one up right now to make a more pointed location). Think its an Intel driver but that might have been introduced with the 5207 model.

The 5206 uses the following:
Chipset: Via Hypervision 4 in 1 (Via USBF 110 Driver update recommended as well for USB?)
Audio: Via AC97
Wifi: Symbol Wireless PPC 2002
Serial Communications: Oxford OX16C95x
Video Capture: Conexant
Video: S3 Super Savage (SSAV5333?)

Yes, I've downloaded this file, unzipped everything, then went into Device Manager and tried to install the driver (going through every single subdirectory...) Doesn't seem to be an Ethernet (not wireless) driver anywhere...

From: Richard Barnes
Topic: 559 Message: 571

Ok, just for the record, I don't believe now that it has anything to do with SP2 or SP3. There is a device called PCI Bridge and the driver for this needs to be installed before the serial port drivers.
I just happened to install the PCI Bridge first when I went back to SP2 and it worked. I wiped the machine again and reinstalled XP with SP3 and installed the PCI Bridge driver first and it worked as expected.

F5206A
1.7g processor
40g hard drive
256mb ram

Thanks

Richard

572. FS: (Possibly) ML910 loaded

Yahoo group: MW800
Date: 2012-12-15 19:20:03 UTC
From: packy41
Topic: 572 Message: 572

I am exploring the possiblilty of selling my spare ML910 laptop. No battery or charger but both can be found on eBay. Battery is the EMC202 or equilalant.

ML910
Intel Core Duo L2400 1.66 GHz Processor
1GB RAM
80GB SATA drive
DVD-RAM drive
13.3" Touchscreen display (1280x800) Sunlight display
ATI Mobility Radeon□ X1400 128MB Video
Internal Bluetooth, V2 using WIDCOM software
Internal GPS Lassen IQ module
Intel 3945 Wireless LAN 802.11a/b/g
Fingerprint reader
Backlit non-rubber keyboard
Touchpad
Most ports have rubber covers

3 USB2.0 ports
9 pin serial port
Broadcom BCM5755M 10/100/1000 LAN
Modem port
PC Card slot
Video port (ATI)
Audio in/out ports (optical)
GPS/WWAN passthru
Docking port (will work with the ML900 docks, but the ML910 requires the lastest verison for pass thru GPS/WWAN to work)

The laptop is in 9 out of 10 shape, and is actually on its way back from Motorola from a HD replacement. HD was factory refreshed with WinXP so its all loaded and ready to go.

This laptop also sports a PCI-E card slot in the display which allows for the use of PCI-E EVDO/LTE based modems from Sierra Wireless or whoever you want to use.

Please email me off list for offers. This is NOT a $200 laptop and is on par with the Toughbook CF29/30 laptops.

To be safe, 12vDC 10amps. I'd have to look up the actual specs but that should be more than adaquate as the heaters should have to turn on.

Depends on the actual model. There is usually a little surge when you first turn it on. In any case, a 10amp supply should be perfect for it.

I just wanted to thank you for the information you are able to provide to this group. Also all the other members that are so helpful. I am still treading water in the learning process for the best solution however with your help I will locate best option for my line of work.

Respectfully Yours
Jim

Based on "vista machines" I'd avoid running it on a mw800. Might have better luck with win7. XP runs pretty good.

Pj,

I tried a fresh install of Win 7 with no luck... I get an error message "THE OPERATING SYSTEM YOU ARE TRYING TO INSTALL DOES NOT SUPPORT AHCI" and it blue screens on me... tried Win 8 and that says that my processor isn't fast enough, which we all know that a 1.5Ghz meets the min req of Win 8. Just need to customize an install DVD or hack the BIOS to fool the setup that the processor meets the requirements.. Kind of BS if you ask me.. You have any ideas for me??

Thanks, Anthony

584. Hello All

Yahoo group: MW800
Date: 2012-12-31 08:52:52 UTC
From: Daniel Esparza
Topic: 584 Message: 584
Attachments: 11 described; binary payloads are missing from this source WARC

I joined because I have a software company that caters to the security / public safety industry, and since most security companies can not afford new MDTs, I recommend various computers, but I find myself really liking the MW800 (my first Motorola computer was a KDT480). I will be asking many questions as I have a demo mw800 that I am using to show clients our software, and hopefully I will purchase quite a bit more of these if someone could tell me where to buy what I need since most of the mw800s that I see on ebay don't have a hard drive caddy, amongst other parts.

I do have quite a few PDRC monitors, and I am sure that I can make those work with the mw800.

Thank you,
--

586. Happy New Year!

Yahoo group: MW800
Date: 2013-01-03 16:58:31 UTC
From: WA8IQO
Topic: 586 Message: 586

Well its another new year. I don't know if that's a good thing or bad, however I guess it's what we make of it, right? After all the Minoan's prediction for the end of the world was wrong. I glad for that, I've spent to much time tweaking and playing with my 800 to waist all that time - LOL

I've just realized that this will be our groups 4th year. Wow! call me sentimental but were has the time gone? It seams just like yesterday that I was struggling to find related information and help because I just acquired my first terminal. Now I've become MDT savvy thanks to all of you who participate in our little corner of the internet.

Since our inception we have grown to to over 125 members and have made over 580 posts. Kinda nice to see. I cant wait to see how much we can grow over the next year and what cool and innovated ideas can come from our think-tank.

I have two favored topics from this past years posts. The first is: "Making a home brew VGA cable" by Anthony,Copracer1990. As far as I know, Anthony is the first one to have successfully figure out how to do this. He has put together a nice How-To Guide in the file section under VGA for everyone. Check it out or drop him a thank you. He put a lot of work into.

My second topic "Android OS on a MW" never really took off. For a short time I was fascinated by this - what if? I did some research and found out that a lot of people were all ready doing this in the PC world. By simply creating a second partition and loading a modified OS available from Android specifically for the PC. During boot you just select what OS to run. Kind of lost interest after learning that many people have been there, done that. OK, I won't lie, Id still like to try it out on the MW...

With that being said, I would like to thank everyone for participating and sharing their knowledge, ideas and I want to wish everyone and their loved ones a happy new year!

Sincerely

Brad - WA8IQO

587. New poll for MW800

Yahoo group: MW800
Date: 2013-01-03 17:05:56 UTC
From: MW800@yahoogroups.com

Configure the drive as master and you should be good. A 10amp power supply (not a battery charger) should work ok

You could try, but I think the PDRC displays (the one's I have seen) were just straight DB15 connections. The MW800 will require you to make a custom video cable in order to bring the correct video lines out. With some of the ebay prices these days, its just easier to buy a monitor or CPU. New MW800 display cables can still be ordered from Motorola from 3'? up to 17'.

If you really want to go to a PDRC type setup with Motorola products, your best bet is to get a ML900, the ML900 dock and the MW to ML900 dock adapter. This will allow the use of the MW800 screen at the front of the vehicle while the laptop sits in the dock under a seat somewhere. The more advanced docks will have an external GPS antenna hook up (and if the 900 has GPS installed) and life is good. Bascially a MW800 in a laptop form factor.

I'll prob be doing this in the wife's truck unless I put my other MW800 in there. Kind of the best of both worlds.

597. MW 810 NMEA GPS Question

Yahoo group: MW800
Date: 2013-01-09 20:19:06 UTC
From: Michael
Topic: 597 Message: 597

I have several MW-810 units that we are tring to implement AVL with. I have the units recieving NMEA Data as I can see it in hyper teminal and if I use a free utility I can see that it is projecting properly with lat/lon. The problem is that the gps is not transmitting a $gprmc line in the NMEA String which our CAD requires. Does anyone know if there is an update to the orginal factory installed gps unit software that may update the NMEA Data.

Thank you.

598. Re: [MW800] MW 810 NMEA GPS Question

Yahoo group: MW800
Date: 2013-01-09 20:28:15 UTC
From: Pj
Topic: 597 Message: 598

I replaced mine with a newer Trimble c2626 unit. It's a drop in replacement for the iq and also supports dgps. It's nmea only and if you find the right dealer they are around $20-$30 each.

There is a spec sheet on the Trimble site with the available nmea sentences.

I am 99.9% certain that the iq will output it if you select it in the Trimble studio setup software (free download from Trimble)

599. little off topic XTL5000 Asto p25 800

Yahoo group: MW800
Date: 2013-01-09 21:48:26 UTC
From: icbmtech
Topic: 599 Message: 599

Might anyone know of a good set of instructions for programming a XTL5000 Radio its a astro P25 I have the CPS , I'd just like to get it configured as RX only I have been a little like I need to setup each zone with a analog mode then start the digital talk groups or something to that affect.,
any how I'd be happy with any info i might get. I dont want this radio to get the brick from the sky treatment.
thanks again

From: Pj
Topic: 599 Message: 600

If your talking about getting it to listen to a 9600 Phase 1 system, you can't with any effecientcy. The P25 standard requires (though newer radios don't really follow this) the radio to affilate to the system in order to unmute radio traffic. The ASTRO25 series radios follow this standard.

The safest way is to enter the site voice channels and setup conventional P25 talkgroups. You'd use the same talkgroup info as the ones you want to hear. However, since your still scanning the system conventionally, you may still miss radio traffic.

Better bet, get a scanner. More flexible, scans more talkgroups than a Motorola (10-15 depending on the scan option) and your $1000 radio won't get bricked. Thats still a $500 savings for a top of the line scanner.

Other than that, you can look over at batboard.batlabs.com for more info on how and why not to do it.

allow me to get my crayons out. The monitor lights up like it should and it shows me that there is no connection between the monitor and the cpu. The cpu acts like there's no power connected. Nothing happens when I press the power button, and yes the switch on the back in the right postion.

Let get my magic marker out.

Previously you mentioned no os. That would indicate that the CPU is functional. It's an actual mw800 error statement.

What Model is it

the cpu states noting! Not even os not installed. it acts like there is NO POWER connected. reread that message and you'll understand it better

A total system reset will occur is you plug the positive and neg wires to a 110v hot and neutral source. Try that and see if it boots after that.

Try swapping the power supply to the monitor with the cpu power supply.
If you don't understand re-read it until you do.

You have 12 volts running to the display and CPU right? Even without a hard drive the computer should boot into bios. Sounds like ur setup is not correct. I find it hard to believe 6 units are bad.

616. Re: [MW800] Re: hhd master

Yahoo group: MW800
Date: 2013-01-12 02:11:40 UTC
From: Matt Carroll
Topic: 601 Message: 616

Based on the discussion so far and all the speak
of crayons and markers I will take nothing for granted, so:

1. Have you opened the unit up and confirmed that there is even a CPU inside?
2. Have you opened the unit up and confirmed no disconnected wiring is afoot?
3. Have you confirmed that there is even a hard drive in the machine?

Bear in mind, most agencies selling these will often:
A. Remove the hard drives
B. Cut the hard drive communication strap
C. Otherwise tamper with internal components.
D. Remove the fuses from the power line (during the un-install process).

If you verify these conditions are not your
issue, you should ensure that your power supply is sufficient.
Are you trying to run all 6 at once off of one battery?
That will certainly prohibit sufficient power.
I proved that to myself when cooking 8 at a time on a workbench.

Recommend connecting your power leads to an
actual 12V battery charger (car charger) to
ensure you are providing sufficient 12V power.
This is how I have been powering them for cooking
purposes for years... works great. Obviously,
don't be a dip-s*it, put an in-line fuse in position.

There is one thing not mentioned so far and since I have the right to be an ass right now, all ill say is carefully read the install portion of the MW800 manual for an idea or two.

Sent from my iPhone

If none of them are working its probably the POWER SUPPLY. Check your wiring.

Well, if you're going to throw them away, then box them up and ship
them to me. I'll take them for the price of shipping.

625. MW520 Monitor with MW800 CPU

Yahoo group: MW800
Date: 2013-01-21 14:08:38 UTC
From: cheezypoof8948
Topic: 625 Message: 625

Anyone know if this is possible?

I can't tell if the connector on back of the MW520 monitor is same as that of the MW800 monitor.

626. Re: hhd master

Yahoo group: MW800

From: cheezypoof8948
Topic: 601 Message: 626

A little late to the party here, but did anyone suggest he flip the master power switch on back of the CPU? When I setup my first MW800, I had that issue. No power and monitor worked. I flipped the toggle switch on back of the CPU, and voila!

Otherwise, me thinks his power supply is not supplying power to the CPU. Both the CPU and monitor CAN suck quite a few amps at turn-on, before they stabilize down.

Hello Everyone,

Im new to the group. I have purchased an MW-800 to install in a security vehicle. Im still trying to piece it all together. It does not have a HD. So I will have to get one. Not sure where to get the needed drivers since Motorola stated they do not support them anymore. Im not very computer literate so any help would be greatly appriciated.

Tony

Topic: 628 Message: 629

If there is no hard drive cable (flex) the only way to get it operational is to send the unit in to Motorola. That is not an order able part.

If its just missing the hd, any 2.5in laptop IDE hard drive will work.

All drivers are available from Motorola on their publicly accessible support site.

630. mw800 display cable

Yahoo group: MW800
Date: 2013-02-18 01:51:32 UTC
From: silverrx804
Topic: 630 Message: 630

after hours and hours of searching i think ive found it...

HP Centronics 36 (HPCN36) Male / HP Centronics 36 (HPCN36) Male
can be found on amazon for less than $4

http://www.amazon.com/Centronics-HPCN36-Male-Pair-Type/dp/B000HDJYFM/ref=sr_1_4?s=electronics&ie=UTF8&qid=1361150147&sr=1-4&keywords=centronics

good luck i have 2 on order should be in on Wednesday i will let everyone know how it works the only other idea i had before i found the cable was a printer cable with the male on one side and splice and solder connections but i hope the cable works ...keep in touch let me know what you guys think

632. MW800 questions & new member

Yahoo group: MW800
Date: 2013-02-25 19:10:05 UTC
From: oh2ftu
Topic: 632 Message: 632

Hello,
I just received my first three MW-800's (5207).
One of them is DOA, as the CPU board has had a tad of heat, and therefore the DC connector both on the board and on the rear is shot.

None the less, all of these have their branch from the HDD flex cut off. What is supposed to be connected, and with what pinout? these have probably been cut when the HDD's were pulled.

All of these came with the datatac modem. Is there a viable replacement for UMTS out there? I wouldn't want to go with usb-devices.

Two of these are to be mounted on our voluntary fire departments vehicles, the third was for development/spares, clearly for spares now :-)

The CPU seems to be changeable but will the bios accept a new CPU?

As these are CPUs only, are the AUX and display -connectors 3M MDR -connectors, 26pin for aux, 36 pin for display 1 and 50(?) pin for display 2?

I'm looking for two or three displays with cables to get these going if anyone has one lying around. I'll have to source HDD's and DC-cables too, but these are readily available anyway.

Best regards,
Martin

633. Selling my stock pile of MW800's

Hi Ya'll

I was going thought my units and am willing to get rid of a few. They will include the monitor, cpu, cable and braket for cpu. They will be $100 plus $30 for shipping if you got a better rate for shipping let me know.

Prob would help if you can list cable lenghts, CPU and display model numbers, HD size etc etc.

Its kinda like saying I've got a Ford to sell, who wants to buy :)

636. MW800 for Sale

Yahoo group: MW800
Date: 2013-02-28 03:06:25 UTC
From: irahartt
Topic: 636 Message: 636

Okay here are the specs.

Motorola MW800

CPU F5206A
1.7GHZ
80GB HDD
512MB

Included with sale:
Touchscreen
CPU
Cable
CPU Mount

Hard drives are included but have been cleaned for the protection of the agency. Included are the cords they vary in length. All turn on will not honor returns because people swap out things.

$100
$30 SHIPPING

641. F5206 start up issue

Yahoo group: MW800
Date: 2013-03-04 21:10:52 UTC
From: silverrx804
Topic: 641 Message: 641

after hooking up the cables i push the power button on the monitor or cpu and the display looks like it tries to start the cpu by flashing the lights on the display and it does it twice then just stays off.

i pulled the hdd and put it in a 5207 and it started up and went to the blue screen of death. took the hdd from the 5207 and put it in the 5206 and had the same issue with the display trying to start it any help is appreciated if i cant get it workin il save it for parts but it would be nice to have 2 running puters...thx

646. MW800 System Cloning

Yahoo group: MW800
Date: 2013-03-21 16:14:32 UTC
From: jbolbach
Topic: 646 Message: 646

Has anyone had any success cloning these units? I have a few (50+) F5206A / F5207A units with 12" monitors, keyboards and cables. I need to nuke the hard drive and reload OS. My plan is to sell them if anyone is interested. I am willing to deal.

Whenever I clone, the unit with the cloned drive will just cursor-blink after POST. Clean load of Windows XP will always work. I read somewhere that Motorola has safeguards in place to prevent cloning? Is this true, and are there ways around it?

As for the units, they appear to not have wi-fi, or gps. Most have 256, 40gb.

Thanks!

Sounds like your not making a correct image. At the least you'll need two images, one for the 06 and one for the 07 as they use different drivers.

Thank you, I will try that.

After going through different versions of ghost, macrium reflect, and clonezilla I was about to give up.

PJ, thanks for the tip. They were different images. Initially I thought that my F5206 image was corrupt. A sense of annoyance at Motorola crept over me when I experienced the same problem with the F5207.

David
This is a few months late. Did you get your cable figured out? I came on today to ask a question about my attempt. I have VGA and USB working and have the "Turn On @ 5v Presents" wired up and I am just working on Audio. I will post my results with everything when I am complete.
So, On to my question. Has anyone nailed the Audio part yet?

Thanks
James

651. MW 810 Touch Screen Jumps

Yahoo group: MW800
Date: 2013-04-01 19:25:18 UTC
From: Michael
Topic: 651 Message: 651

I have several MW 810's that the mouse jumps all over the place if you use the touch screen or the mouse. These systems were formated and updated fully with Windows XP. I used the drivers on the original disk that came with the systems from Mototola.

I was wondering if someone else experienced this and if it was related to the display driver or mouse driver and if there were any updates to apply.

For the record if I do a full shutdown and restart it works normal for a few hours up to a few days.

The best way to so this (when you can) is to launch the mw control panel and try to get to the GPS on/off tab. Once you manage to do this, go into device manager and disable (do not remove) the Microsoft serial mouse.

This is a know Microsoft issue and still rears its head on win7 as well.

There is a registry fix out there but sometimes that doesn't work.

It's windows seeing the GPS data as a serial mouse.

From: Pj
Topic: 651 Message: 657

I may have failed to mention before...

When the mouse is NOT jumping, assign your MW manager to a soft key. This way you have a chance to run the program and then use the touchscreen to get into the GPS on/off field.

Once you manage to turn off the GPS then go into your Windows Device Manager and disable (do not delete) the serial mouse.

The serial ball mouse (or serial mouse - both have been seen) will usually only show up when the problem is there. Once its disabled - it should not pop back in as windows will see it being disabled even though detected.

JMR - your group email on this one went into my spam folder FWIW

From: Pj
Topic: 658 Message: 659

If memory serves, no for the display. The display will work with the 5207 and 5217 as display 1 (the smaller display connector) and you must use the mw810 display cable as the display side of the connector is different. The CPU side is the same.

The keyboard(s) will work with any USB computer.

661. Re: mw 800 cpus

Yahoo group: MW800
Date: 2013-04-14 19:59:03 UTC
From: packy41
Topic: 660 Message: 661

In case anyone is interested in these, they are bare bones 5206A's with no options. Mr Schafer is unable to test and is unable to provide the part number to the displays. Could be a good deal or a doorstop. No Wi-Fi, GPS, video input or cables.

Unable to get further details from the seller.

For here on in, and to prevent questions, concerns or fraudulent sellers (like Jess Hodge in the past) I am going to modify our terms of service for the group as it pertains to advertising items for sale in the group.

Complete description and quantity of the item(s), CPU, Display and cable part number or lengths and installed options will be required.

For instance this would example will not be appropriate:

"MW800 for sale with display, PayPal only"

A more appropriate listing would be:

"MW800 with display for sale"
-MW800 F5207 CPU with Wi-Fi, 80GB hard drive, 512MB RAM, 12.1" XGA FLN3063A display with 4ft display cable and power cables included. No keyboard, no other obvious options seen

I have no issues if you want to upload pictures to the groups photo section as long as you reference the photo to your post and vice versa. Lets face it, a detailed description and photos (which are not required) will go a long way in netting you a quick sale and less clarifying questions from the masses. This isn't eBay or Craigslist and none of those rules apply - just simple courtesy.

The world of mobile computing is a small one, and many members here are IT professionals, first responders, installers, and just plain old hobbyists or just like different computers. There are a quite a few people here who know other members professionally and otherwise so getting a "fast one" over another member may not work so well.

Any deliberate attempt to scam anyone here will be met with immediate banning from the group and if needed details will be forwarded to law enforcement if requested by a group member (which also happened with Mr Hodges).

With that, happy buying/selling/trading!

663. MW810 group

Yahoo group: MW800
Date: 2013-04-14 20:03:22 UTC
From: packy41
Topic: 663 Message: 663

For those who are new or might have missed it, a MW810 group is available for those members who have those units. As "used" ownership of these are still in very small numbers it may not be as active...but a good place to build of a knowlegebase.

Feel free to visit/join!

http://tech.groups.yahoo.com/group/MW810/

I haven't seen those in a long time. Neat idea though. I want to say Havis or Troy had a similar mount.

FWIW, also look for MW810 mounts if you don't have any luck with the MW800 branded units. The screens have the same hole pattern so those are interchangeable. The CPUs are slightly different. Keyboards are the same.

From: Pj
Topic: 660 Message: 667

FWIW to the group, I had privately emailed with Mr Schafer several times today asking for details. From the outset he was belligerent on his responses (as he was with the group in the past) when I was asking for basic information such as options and part numbers. His response was "why do you care, they are free" etc.

This member has also been fairly belligerent to members attempting to help him in the past with many biting their lips in helping him.

He has since unsubscribed from the group today. If you have a deal pending with him, please have the notion of "buyer beware" as IIRC those CPU's might be DOA based on the "work" he was trying to do to them in past postings. Could be good parts machines or just a pile of junk.

Two suggestions on these rules if the person chooses to post
photos:
1) The photos be in a folder named something like "MW800 For
Sale by (callsign)" with the appropriate as opposed to having a
bunch of photo files named scattered across the files area with
names like "IMG_0171.JPG" and no idea what the files are there
for, or who posted them, or when.
2) The photo folder be deleted by the poster once the sale is
complete.

I would agree with that. The last time I looked we were using 97% of our available space with yahoo! That's one reason why I moved the 810 stuffed to its own group.

I just looked at the allowed space and somethings not right? It says were are using 0% of our 100 gigs. Either they giving us more space now or the monitoring system is down.

Currently I think the group is set to have any files uploaded by members approved by a moderator. I don't remember how I set it up and its been awhile since I played with any settings.

I'm still toying with the idea of a dot com/org site. I moved by business site (www.ContractCanine.com) over to WordPress and after about six months of playing with it I've gotten pretty good. Anyways that's for another topic.

672. Re: MW 810 Touch Screen Jumps

Yahoo group: MW800
Date: 2013-05-09 23:02:56 UTC
From: cburnaman1
Topic: 651 Message: 672

Here's what I use in batch scripts to prevent GPS detection as a serial mouse.

```
------------------->8-------------------
::: prevent gps detection as serial mouse

reg.exe add "HKLM\SYSTEM\CurrentControlSet\Enum\ACPI\PNP0501\3\Device Parameters" /v
SkipEnumerations /t REG_DWORD /d 0xffffffff /f

reg.exe add hklm\system\currentcontrolset\services\sermouse /v Start /t REG_DWORD /d 0x4
/f

devcon.exe disable *serial_mouse*
devcon.exe disable *ballpoint*
devcon.exe disable *PNP0F09
-------------------8<-------------------
```

Save as a .bat file, run in user's startup folder/"run" regkey/group policy/etc.

You'll need devcon.exe (http://support.microsoft.com/kb/311272 for XP, http://social.technet.microsoft.com/wiki/contents/articles/182.how-to-obtain-the-current-version-of-device-console-utility-devcon-exe.aspx for Win7) in your PATH.

Works on MW800's, MW810's, Toughbooks, onboard & external GPS devices.

Hope it helps,

Colin

I've done this with different Trimble tools-- Trimble GPS Monitor, Configurator, SQMon, etc. I know in GPSMon 1.06 it's under Configure > Receiver Configuration > NMEA > Sentences. More recent releases of Trimble tools are at ftp://ftp.trimble.com/pub/sct/embedded/bin/.

--- In MW800@yahoogroups.com, "Michael" <mjspiro@...> wrote:
>
> I have several MW-810 units that we are tring to implement AVL with. I have the units recieving NMEA Data as I can see it in hyper teminal and if I use a free utility I can see that it is projecting properly with lat/lon. The problem is that the gps is not transmitting a $gprmc line in the NMEA String which our CAD requires. Does anyone know if there is an update to the orginal factory installed gps unit software that may update the NMEA Data.

674. "Hello"

Yahoo group: MW800
Date: 2013-05-10 00:34:39 UTC
From: cburnaman1
Topic: 674 Message: 674

Hi. My name's Colin.

I work for a large municipality in the Southwest US, providing IT support for a number of departments, including Public Safety. My background is in OS/HW support, scripting, application packaging, software deployment, workstation imaging, VMware, etc etc.

I began working with CAD and MDC/MDT's in '06-- MW800's, MW810's, and other ruggedised workstations. I've worked with vehicular radio modems, serial, USB, and onboard GPS devices, NetMotion, RadioIP, 3G modems, Windows Mobile Broadband, and, well, lots of things. Lately, two-factor authentication for CJIS requirements.

This isn't a job application, though I realise it's beginning to sound like one. I'm willing to offer advice on related topics, and may occasionally have questions of my own for the group.

All that said, my reason for speaking up after lurking for a few years: We're engaged in replacing our fleet of Motorola vehicular workstations with ruggedised systems from another vendor, and I'd hate to see these end up as scrap. Some will likely end up in other, non-Public Safety departments (mostly 810's, which I will continue to support). Several hundred MW800's, without hard drives, _may_, if those up the chain approve, be available for purchase. If there's interest, and pending said approval, I can supply model numbers and bona fides. The units may end up on ebay, or in municipal auction. (where I will bid $1 on every pallet:)

So. My name's Colin, I know a bit about MW800's, and don't mind sharing. I do wish our replacement systems had hobbyist message boards-- give it 5 years or so.

Cheers

I'm always in the market!

I am presently looking for cheap units to but in a few fire vehicles at my local fire department just as an oversized GPS and quick hazmat lookup. Then again trying to get some of the senior fire guys to use them is the same when I was training older cops who wanted nothing to do with them...

676. Re: [MW800] "Hello"

Yahoo group: MW800
Date: 2013-05-10 01:26:29 UTC
From: Mike Morris WA6ILQ
Topic: 674 Message: 676

I'm just looking for one operational unit that I can bolt
into the front of my daily driver, and a few spare parts
in case something breaks.

My needs are a little more than what Packy41 said, but
not too extreme:

1) an oversized GPS (anybody have a recommendation
for an application that does as much as my Garmin?)

2) Allowing the passenger to lookup some files while
in motion (using an iPhone as a mobile WiFi hotspot),
or perhaps as a wired connection).

3) A few ham radio applications - like APRS track viewing.

4) Able to hotsync files / directories while parked in the
garage at home.
Picture a homebrew dropbox-like of application that has
the house server replicating files on the car computer
(both directions) over a WiFi connection to the server in
the house.
Naturally that connection would be MAC address restricted.

5) Every Starbucks, 90% of the McDonalds, 15% of the Burger
Kings and about half of the Denny's restaurants around here
has free WiFi - and it usually extends into the parking lot. The
ability to look up specific stuff / surf at faster than cellphone
speeds would be nice.

Mike

PS - Colin: What make / model are the replacement units?
Around here some of the local agencies (even the dogcatcher)
are using Toughbooks on mobile swivel mounts (the Toughbook
sees the mount as a docking station) that allows use by either
the driver or the right front seat passenger.

Ha...I do that in my truck right now with my 810...and the same with the old 800 but add in some more data ;)

Although its discontinued, Garmin made "Mobile PC" which turns the PC into a giant Nuvi with gas buddy, airline, hotel support if you have an internet connection.

Rumor has it that you can obtain a copy on pirate something bay ;)

The software uses the current Garmin format data which is updated often. Again, I am sure that Capt Hook might be able to help you out with that.

If your going MW800, I recommend the F5207 or F5217 models. Try to get a F5207 with a GPS built in already as you really can't source the parts for non-GPS equipped models. All 5217's should have a Garmin or uBlox GPS installed.

Getac B300's for PD, and Getac V200's for Fire. Haven't installed any V200's as of yet, but the B300's swivel nicely.

$$$ units...at least when I priced them out. FWIW Getac made the ML810, 900 and 910 Motorola laptops.

The only known way to get the HD items it so send it into Motorola under flat rate, or if your lucky time and materials rate (which should be cheaper). You cannot order just the caddy, flex, heater - its a repair depot restricted item.

Display and power cables can be ordered by anyone.

To use the GPS you need to order the GPS/WWAN daugherboard (orderable) and then buy a Trimble iQ or Condor C2626 GPS (cheap from trimble, iQ is discontiuned but I have a spare here) and then order a GPS antenna cable to bring it out to the rear of the unit (custom cable makers can make these, or order one from moto (not the cheapest).

The WWAN/GPS daugherboard will get you the PCI-E slot on it as well so you can run a Sierra Wireless or similar EVDO/LTE modem and IIRC (been awhile since I opened mine up) a 2nd slot for the wifi card.

Your biggest expense will be to aquire the HD caddy/flex/etc as this is a Motorola only item.

688. HELP MW-810 WONT START

Yahoo group: MW800
Date: 2013-07-22 16:54:49 UTC
From: Qua West
Topic: 688 Message: 688
Attachments: 1 described; binary payloads are missing from this source WARC

Hi I recently installed window 7 on mw810. Everything was working fine. Until I installed the drivers from Motorola. During the process the software wanted to reboot to finalize installation I clicked yes and the mw810 shutdown and new restarted. Now when I try to restart via the display button or directly from cpu the computer display will turn on then shutdown the power button on the display is yellow then dims out and turns off. I didn't even get a chance to configure the code plug so everything should be default. The cpu is connected directly to the battery positive and ground is connected to the chassis. Is there any special buttons I can press to get this thing going. I need it for work to submit reports. Any help is greatly appreciated.

Any chance you enabled ignition only power up?

Tat sounds like a hardware issue more than software. I run win7 and did not encounter that.

Can you get into the post setup in bios?

Thanks PJ for responding. I never got a chance to configure the power options. So I believe it should still be able to power via default monitor or cpu. Just in case I will hookup an ignition wire and see what happens. I also agree with you that this is a hardware issue. Windows 7 is very good. When it tries to power up usually you would see a /\/\ screen so I can get to bios but it doesn't even get to that.

694. VLM 700 LTD Data Modem

Yahoo group: MW800
Date: 2013-10-07 05:31:20 UTC
From: MW800-owner@yahoogroups.com
Topic: 694 Message: 694

Are there any Moto Dealers on the board?

Can you provide a release date and pricing information on the new VLM 700 LTE Data Modem being released by /\/\ and Verizon?

Are the sales restricted? Will they be available from local Verizon Outlets? ect, ect...

Thanks - WA8IQO

Your best bet is Jeff at Sandy's Communications. I believe it is band 14 public safety (ie no verizon etc) but will check.

Those modems are usually in the 1k+ range.

696. MW800 switch on problem

Yahoo group: MW800
Date: 2013-10-15 15:47:30 UTC
From: <ffr58kk90@...>
Topic: 696 Message: 696

Hi all

I have just purchased 3 x MW800 cpu model F5207A and three screens model FLN3062B, they came from a UK Fire dept and were working units before the drives were removed for sale, sadly, there were no display cables included :-(.

I have though managed to obtain a 36way mini centronics to 36way mini centronics cable and connected 12v to both the CPU and the screen, when I switch on, the screen illuminates, I get a picture of a CPU and a screen with the cable disconnected on the screen.
I have tried all CPU's and all screens, I get the same effect.
The screen and CPU when connected draw about 1.6A from a 12v supply, but there is no video or syncs coming out of the CPUunits on the 36way display connector.

One thing I have noticed is that the fans do not run on any of the units, can anyone confirm if they run constantly or just when hot.

I also tried to feed 12v into pin 8 pn the AUX connector in case the units require ignition supply but it didn't help.

The units came without hard drives, I have fitted a hard drive, but on the group messages here I see mention of a heater flex and issues starting if the flex is damaged.

These units do NOT have any heater flex in them, presumably because the UK is not so cold, but could this be the reason I see nothing on the display?

I am stuck as to what to do next, can anyone offer any suggestions?

Regards
Tony

As the owner of about 300 such systems, I recommend you purchase the proper display cable from a Motorola dealer. They run $60-$120 depending on the length and where you buy them.

Hi Matt

You may be able to get them in the US, but I cannot in the UK, I have a friend who works for Motorola in the UK and he has tried to obtain one, they are now apparently obsolete (at least in the UK), all the UK customers who had MW800's (Fire depts and ambulance trusts) have now changed them to MW810's which use DVI connectors.

Regards
Tony

>
> > There are two monitor connectors on the CPU, Monitor 1 and Monitor 2. Monitor 1 is the smaller of the two (about 30 pins, Monitor 2 is the larger of the two (about 50 pins). The larger connector is also right-angled. The actual monitor has the smaller 30 pin connector on it. The cable you sent me has the smaller connector on one end and the larger on the other. Obviously, the one end of the cable won't fit at all, but the other end looks to be the right connector, except the rubber on the connector will not allow it to even touch the mating connector on the monitor. It looks to me like an MW-810 cable, because the connector on those monitors appear to be the larger one from the photos that I have seen.

Look back thru the messages here or on Batlabs. Someone had the pin out configurations all mapped out within the last year.

Look in the files area of this yahoogroup.
You will find a folder called "VGA" that has - as you would suspect -
a diagram of the VGA cable.

Hi

I was unable to find a centronics mini36 to mini36 cable in the UK for love nor money, in the end I bought 2 x centronics mini36 to normal centronics 36 cables, cut the normal big connectors off and spliced all the individual wires together 1 for 1.
Effectively this made a mini36 to mini36 pin to pin cable, I can confirm that it works with the MW800 and it's monitor, the only 'problem' is the genuine Motorola cables use screws to fix the shell into the socket on the MW800 and the display, whereas the nini centronics don't have screws but use a latch, so you will need to find a way of holding the shell into the unit, I used Epoxy putty!, not prettyu but it worked!.

Regards
Tony.

I haven't seen a full "restore" CD in the common terms of the early 2000's computing, but Motorola does have CD Images of all the drivers and software that comes on these units. Some/most/all of the same software is located in this groups file section.

For the .iso image, you can go to motorolasolutions.com, do a search under the computers/disconinuted products, and search mw800 drivers. It will lead you to the Motorola Symbol site that has manuals and software for the units.

If your looking for one that installs windows xp etc, you will not find it here or there. They did ship with a Windows XP restore CD, but not a full out of the box "Restore" CD in that context.

Did they come in the box if you bought these new? I have about 5 brand new MW800s still in the factory boxes, and I did open one and see that it had some CDs, but I never checked out the CDs

I've only seen two... One the windows xp image and the driver/software CD. The only one I have seen as a complete image was the MW520 with Windows 98 (or 95, forget which).

Did they come in the box if you bought these new? I have
about 5
brand new MW800s still in the factory boxes, and I did
open one and
see that it had some CDs, but I never checked out the
CDs

On 12/6/2013
4:16 PM, Pj wrote:

I haven't seen a full "restore"
CD in the common terms of
the early 2000's computing, but Motorola
does have CD
Images of all the drivers and software that
comes on these
units. Some/most/all of the same software is
located in
this groups file section.

For the .iso image, you can go to
motorolasolutions.com,
do a search under the computers/disconinuted
products, and
search mw800 drivers. It will lead you to the
Motorola
Symbol site that has manuals and software for
the units.

If your looking for one that installs windows
xp etc, you
will not find it here or there. They did ship
with a
Windows XP restore CD, but not a full out of
the box
"Restore" CD in that context.

715. FKN8144A - OEM CPU to VGA Monitor Cable on Ebay!

Yahoo group: MW800
Date: 2014-01-28 17:38:16 UTC
From: MW800-owner@yahoogroups.com
Topic: 715 Message: 715

I know there has been some discussion on the board about connecting a standard computer monitor to a MW800 CPU. And I know some of you have figured out how to make the cable.

However, for those of you who are looking for OEM Cables, I found some currently listed on eBay:

Item # 261380686121
Title: Motorola Fkn8144A 1.6Ft(0.5M) Mw800 To Std Screen Cbl

There are more then 10 listed for $40 ea. (Buy It Now) with Free Shipping! Now that a deal!

Get them while they last. I have also add a pic and part number to the photo section of the board.

From: <ceaprod@...>
Topic: 715 Message: 716

I am sure these have been answered in previous posts, but....

1) Can you use this same cable to hook up the monitor to a different CPU?
and if it can.....
2) Do the touchscreen functions work via the USB cable?
3) Will the function keys and lights work if the USB cable is hooked up?

Thanks :)

The board members will correct me if I'm wrong, but I believe the ebay listed cable is for connecting the cpu to a standard pc monitor. Not the other way around. I am not aware of a cable that will connect the /\/\ display to a standard pc cpu.

You can find info on the home brew cable discussed on the board in the file section.

Topic: 715 Message: 718

They made two. One from CPU to standard monitor, and one from standard desktop computer to MW800 display. I believe the latter has been discontinued for some time, but the first one is still available.

I bought mine from tessco also and its an active GPS antenna in which the GPS signal is fed through an on board (antenna) amplifier. The power is sent directly through the coax which is 5 volts DC supplied from the computer GPS board. I have an average lock time of around a couple seconds from startup to full DGPS lock , I don't know the model off hand so I'll post it tomorrow when I can take a closer look. Ive slept since I bought it so please forgive me, hope that this helped a little.

From: <louis.gardino@...>
Topic: 725 Message: 726

I put Pupply Linux on one of mine, just to see how it worked. The Xtrakeys of course, did not work. But compared to XP Pro SP3, it was a lot faster.
If I ever decide to use one of them for a radio monitoring station or something that logs contacts automatically, I may put Linux back on.

From: <louis.gardino@...>
Topic: 575 Message: 731

There could be a number of other problems then. Missing or damaged heater flex would keep it from booting up.

732. Re: [MW800] power supply

Yahoo group: MW800
Date: 2014-03-28 04:04:26 UTC
From: Pj
Topic: 575 Message: 732

Power on surge from both units turning on may exceed 6a.

IIRC, the MW800 will boot with a bad/missing heater flex, but a MW810 will not (its required). I could be wrong on that, I know the ML series will boot without one.

Power Consumption (at 13.8VDC)
CPU Maximum: 5A
Typical: 3A
Suspend Mode: 0.7A (when fans are not
working)
Display XGA: Maximum (when heater is not working): 3.5A
Maximum (when heater is working): 6.5A
Typical: 3A
Suspend Mode: 0.4A
SVGA: Max (when heater is not working): 2A
Maximum (when heater is working): 5A
Typical: 1.5A
Suspend Mode: 0.4A

Also, the CPU can be configured to require ignition switched power though the auxiliary connector. Not a common option, but I've seen some programmed that way (FDNY uses this option). Also check the obvious.. the rear power switch. I've helped three people trouble shoot - and that rear switch was never turned to the on position.

There are two types of power supplies... switching and non-switching. I really forget which one is better to use, so you'll have to google the differences. Switching I believe is cheaper the way it works, but non-switching was more expensive, but IIRC gave a better sine wave (I think, or I can be full of BS)

Sounds like an OS issue, not a hardware issue. Properly load in Windows or a recovery CD. If your seeing a cursor, its a software issue.

my 800 boots to bios and then to a blank screen with a blinking cursor on the left side of the screen and the comm light is a solid yellow. I've changed cables 6 times and still nothing. the cable must be working because i can get and see the bios screen, so if the cable was bad, i couldn't see anything right?

I have some disks with some mw800s that I have brand new in their original Motorola packaging, I have to go to my warehouse to get them out, but if you just want the drivers and such, you can get that from batlabs

Late reply, but for the new members...

The MW's are like any other windows computers. All you need is a windows install cd (oem, dell, hp, whatever and a good key) and the support drivers which is available here or on the Motorola (symbol) support website.

That's it, nothing special :)

These computers are not like the old school mdts that ran on its own deal.

Enjoy!

From: dguyton@...
Topic: 175 Message: 769

Resurrecting an old topic here.
I just purchased a v1.0 MW810, and I have several MW800's of various ages and models. I'd like to know if anyone on this board or the MW810 board (yes, I cross-posted), has tried running Android on the MW series.

If you have, please post your experience. For instance, do all the touchscreen monitor functions work properly? Anything special you had to do in order to get it to work?

I've resisted this path for years, but unless I am happy with WinXP, I'm not so sure I have much choice in the long run (or run Linux, or something else). I did get Win7 32 bit to *mostly* run properly on a MW800. I have not re-visited that in awhile since it was such a pain to get it working well at all.

On the other hand, I like to tinker with this stuff and see what I can get working efficiently, and for how cheaply (e.g. I have a few Panasonic Toughbook CF-19's... Mk1 and Mk3... that I run Win7 on... voila... cheap tablet).

D

Check to see that GPS power enabled in the MW800 application in windows (green light its on, red, off).

If it is showing green, try a factory reset command a few times, and what has worked in the past is to use the Trimble SKII software tool to reset the GPS. Remember, the GPS's default to the Trimble TISP format on a reset, and you will need to configure Port B (I think) to output NMEA.

Some more tips may be here:

http://batboard.batlabs.com/viewtopic.php?f=14&t=77615

5206 MW800's use the Trimble SKII or SK8 GPS, the 5207 uses the iQ module and the 5217 may use either the iQ or the uBlox SBR-LS-0-000 GPS.

777. Re: [MW800] GPS Help

Yahoo group: MW800
Date: 2014-10-06 22:20:28 UTC
From: Michael Cole
Topic: 771 Message: 777

The only choices I have under Motorola are: MW800 CPU and MW800 display? I tried the CPU one and got the error.

Do you think I haven’t loaded all proper drivers?

I think it may have something to do with the COM ports. My ports are listed as 3,4,5 and 6. Did I possibly load the drives in the wrong order?

Send me an email off the group if you would like me to remote in and look at it. I use teamviewer.com for remote access help.

Packy

I got the cpu diagnostics talking to the computer. It shows both the radio and gps on the last tab but only the radio has an “on/off” button. Shouldn’t the GPS have one too? Been a long time since I played with the 800.

Thanks

Jason

Mw manager, not diag. I believe in my link to batlabs I have the port assignments mapped out on that page.

[MW800] <MW800@yahoogroups.com>
wrote:

Check to see that GPS power
enabled in the MW800 application in windows (green light its
on, red, off).

If it is showing green, try a factory reset command a few
times, and what has worked in the past is to use the Trimble
SKII software tool to reset the GPS. Remember, the GPS's
```

default to the Trimble TISP format on a reset, and you will
need to configure Port B (I think) to output NMEA.

Some more tips may be here:

http://batboard.batlabs.com/viewtopic.php?f=14
<http://batboard.batlabs.com/viewtopic.php?f=14&t=77615> &t=77615

5206 MW800's use the Trimble SKII or SK8 GPS, the 5207
uses the iQ module and the 5217 may use either the iQ or the
uBlox SBR-LS-0-000 GPS.

Subject: [MW800] GPS Help

To: MW800@yahoogroups.com

Date: Sunday, October 5, 2014, 7:17 AM

Hi, I recently purchased a 5206 on ebay. I had to

replace the HDD and install XP on it. I would like to
get

the GPS working because i would like to use this computer
on

a boat for navigation.

I believe I have installed all the

drivers. I have no errors in my device manager. I cannot

connect to the GPS in the Trimble software. I also
cannot

locate COM 2 where apparently the GPS

resides.

Please help.

Mike

Rededit has nothing to do with extrakey. Use the extrakey app.

thanks, found it. Now how do I get extra key to work?
regedit shows all 6 keys programmed properly but the
programmed buttons don't work. thans

you need to make sure that the extra key application runs at startup just make a registry entry to start it when Windows runs Sent from my Verizon Wireless 4G LTE smartphone

Install the app. Create a shortcut for the app and put it in the startup folder.

Look at the app icon and look for a "enable on startup" or Similar setting (pretty sure there is one).

Pretty straightforward

Hello all on the MW800 Yahoo Group. My name is Jeremy and I just purchased an F5206A off ebay for what I thought was a steal. I am an avid Motorola radio supporter as I have 8 Motorola XTS series radios mostly in UHF. I was a radio technician at a Motorola shop and am looking to get back into that area as I'm only 18, also I'm an avid computer and electronics type of guy going to Tidewater Community College for an AAS in Electronics Technology with my career goal of radio tech at a local or state level. I will post pictures of my 5206 when I get it which should be about a week.

i have a mw800. Model F5206a. The hard drive was bad so I purchased 2 more. There 80 gigs. I am trying like hell to install windows xp and then windows 98. I know it can be done but I am doing this thru the usb port on the back of the MW800 since there is no other way to do it. But its giving me issues. I finally got win xp to load and it got stuck at the 30 min mark and would not finish. So now I am going to format the entire drive and partition it for 60 gigs and 20 gigs. Has anyone had issues with trying to get it to take an os and how did you do it.

If there is no need for Win98, just skip it. Not worth the aggravation.

If you do need it, find a boot manager/dual boot program and partition the hard drive that way.

Your best bet is to find a cheap bootable USB drive, they seem to work pretty well with the MW series.

I am looking at making a dual boot with DOS 6.22 for some of my RSS software that isn't windows based (like spectra and GTX). I have a fresh copy of XP on mine and she is running like a champ the only thing I can't figure out it the Wifi.

I bought one from eBay and it had a bad hard drive. I paid about $20 and got a brand new one. I peeled off the drive warmer and bolted it up. I then down loaded a full install of XP pro and copied it to a 4gb thumb drive. You have to go into your bios and make sure it boots from usb.

I loaded up XP and then all the drivers listed on this site. It now works like s champ! I did have to have someone from this site remote in to set up my gps. The Gps ports needed to be renumbered.

MAYDAY MAYDAY...AGAIN
Ok folks. I am at my wits end. If you have ever formatted and installed WinXP on an motorola mw800 model F5206A and want to make money then please get ahold of me.
I will pay someone to get this issue fixed cause I am at a loss.
I tried over and over to get it to program thru the usb port and it isnt happening.
I purchased 2 IDE drives that are 80 gigs to replace the 40 gig one in there. I bought a converter that converts the connection to usb..nothing. I either get a blue screen or the drivers get stuck at 30 min left.
So if anyone can do this I will send you the 2 drives, windows XP cd and all the drivers if you can just install it.

Name your price...cause I haven't slept in 2 days and I need help.

This is what I did. Mine had a bad drive

Buy the identical HD that came out of it. Prolly $20 on eBay. The HD that is in your unit is prolly fried.
Copy an xp pro image to a 4 gb USb memory stick

Set up your bios to boot from the USB port

Follow instructions

I would consider selling mine for the right price. It is a 5206 with Gps in good condition

Mike

It wasn't too hard for me to do but I booted mine from an external CD and it worked perfectly. I am just looking for something to use as a mount so I can use it as a desktop until I get another car to put it in (probably a crown vic then run APRS and a GPS program off it).

I did the burn as ISO..No problems. I have done this thousands of times..this machine is giving me the red ass...
i did a disk check..both disks good.
formatted them as well...I did it with partition magic and it did the format and partition without issues.
its hanging at the 30 min mark...

well i guess since the usb is 1.1 not 2.0 then thats why i am having such an issue. However, the firewire port next to it must be ok to use. now to just find a external cd drive that is firewire not usb

I have a friend who sells 12 volt computers, and was able to make everything work on the MW800 screen with the computer, except the audio, and this is using some cables that he put together. He said that he could make the other cable "with the audio", but he would need to sell them for about $40 bucks to make it worth his while, so in essence, you would be able to use your MW800 monitor with any computer, including laptops, and still have the awesome functionality of the bright screen with the button mapping

The question is..... how much would this cable be worth

864. MW800 WINDOWS XP

Yahoo group: MW800
Date: 2015-02-08 01:11:37 UTC
From: officer_prasad@...
Topic: 864 Message: 864

Does anyone know how to configure windows xp proxy server? I recently got mw800 and the COA/ products key for Windows xp sticker was missing. I was finally able to obtain a product key, however now I am unable to get the windows xp activated as it requires a configuration for proxy server. It will not connect to the Internet even with LAN connection. I've called Microsoft as well to try to activate it, but they no longer provide customer service for xp all you get is recording. Anyone knows how to work on this would be a great help. Thanks

Hi,

We use GPSGATE Client on the MW800 to track in real time back to our GPSGATE server.
http://gpsgate.com/download
You can also use the client to share your GPS with other applications etc.

This works great with no problems at all

Regards,
The Outlaw

Thanks, I did give that a try unfortunately, I am not good at getting things to work properly or have no knowledge at all about this things. We tried it many times, but it would not work. I wasn't sure if we needed more then one gps usb which is a globalsat bu353s4. It would not configure or find any device connected. Do I need to have a tracking device in order for it to work or can I use the usb gps? Not sure how much of a help you can provide but anything would help to get this tracking system to work.

The unit has a gps port from the CPU, but I'm not sure if that means it does have a gps? I was told to install drivers and download garmin map software and that should configure the GPS. I did purchase a globalsat BU 353S4 gps for pc which is a usb type. I am getting signal on the gps device, but yet it won't configure location.

If it has an antenna connector at the gps port on the back of the cpu then it has built in Gps. If it has a rubber plug then it doesn't. If it does have oem gps I or someone else can remote in and set it up properly but time is money. If it has the oem Gps u need an external antenna as well.

It definitely has the gps port, but no antenna. Any specific antenna I should get? If you can guide me through and once I get the antenna you can remote access it and get it set up. Do let me know your charges. Thanks

Tessco.com - then pick one you like based on your vehicle and preferences.

Tracking will generally require an internet connection so plan for that. Gpsgate as someone else mentioned before is a good low/no cost solution.

Hi,

We use GPSGATE Client on the MW800 to track in real time back to our GPSGATE server.
http://gpsgate.com/download
You can also use the client to share your GPS with other applications etc.

This works great with no problems at all

Regards,
The Outlaw

Subject: Re: [MW800] mw 800 driver

Hello,

Does anyone know if the MW800 can do real time gps tracking without having to purchase a tracking device? Since it has a gps port, I wasn't sure if it needed a device. We would like to get real time tracking on our vehicle's. Any suggestions or help would be appreciated. Thanks

891. Driver for 5207a touch screen win xp

Yahoo group: MW800
Date: 2015-05-07 19:13:03 UTC
From: radioman2013@...
Topic: 891 Message: 891

Picked up a 5207A everything works except the touch screen and it did work at first power up, but then the computer keep locking up on boot. I had to do a go back because of a bios issue which is now resolved but the touch screen doesn't work. I suspect it's a driver issue, but I can't find which driver relates to the touch screen. Any help would be appreciated

892. GPS antenna

From: radioman2013@...
Topic: 892 Message: 892

I just posted about my problems with a touch screen, but I decided it would be better to pose my second question in a separate post.
I have the Motorola combo GPS and NMO mount antenna made for the Mototrbo series radio's.
Was wondering if that would work with my 5207A.

In what way do you set up a comport for the touch screen? I don't see it listed in device manager or a yellow exclamation sign. Do I have to do a search for hardware not configured properly?

Quote" or the touch screen software" Quote

Agreed, but which software package has it for the 5207A? I went through most of the software listed here and didn't find anything specifically for the touch screen. Is it inside another package?

I sure do. If you are referring to the motorla software to calibrate touchscreen / set hot keys etc. That is installed. When computer starts up mouse cursor is in the middle of screen soon as it goes to home screen mouse goes to right side of screen and it doesn't do anything. I have to use that software to try to calibrate then exit to turn off touch just to be able to use the mouse.

If its immediately going to a spot on the screen its usually one of two things:

#1 - Screen damage

#2 - (usually not) GPS (if equipped) is being recognized by Windows as a serial mouse. In this case, its usually jumping all over.

I'd say #1 - there is some sort of damage done to the touch sensor.

899. For sale- MW800 computers

Yahoo group: MW800
Date: 2015-05-25 08:28:51 UTC
From: useless_93041@...
Topic: 899 Message: 899

Hello, I have several MW800 computers for sale. Monitor, Keyboard, and CPU (F5207A) and monitor/cpu cable. (no power cables, you will need two). No brackets.

They have a fresh copy of Windows XP Pro 2002 SP2 installed and have the COA sticker as well, 40G HD, Intel Pentium M 1.8ghz processor.

They came from a police department that upgraded to a different computer.

$125 each shipped anywhere in the lower 48 states via FedEx Ground.

paypal or postal money order,

Thanks,

Ulysses

It should be a reverse sma - you can order replacement cables internally from parts suppliers. This was done when the FCC was clamping down on all the massive antenna and power amps that were the rage back in the day

From: radioman2013@...
Topic: 891 Message: 915

I bring this up again as I have yet to resolve the issue. What is the procedure for loading the Touch Screen driver, I have played around with most of the resources in the CD's available on the internet with no success. I also had a post about the GPS antenna, and whether a current one used for the Mototrbo radios would work are there any takers on that question.

921. MW 800 drivers

Yahoo group: MW800
Date: 2016-08-19 22:00:29 UTC
From: Sean Carroll
Topic: 921 Message: 921

Hello Group,
I recently acquired a MW800 monitor and keybord. I also have the appropriate cable and adapter to use them with a laptop. I am getting video signal but the touchscreen and keyboard is not working. I am not very computer literate but I assume I need the correct drivers. OS is Windows XP pro. I did visit the page with the driver downloads but it is not clear to me which ones I need to install. Any help would be much appreciated.
Thank you.

Sean

The screen and keyboard do not require any special drivers.

Depending on the model of the screen, it is SVGA or XGA resolution.

Was this an eBay cable?

Yes it is an adapter cable from eBay. Not sure about xga etc.

The GPS is a custom Trimble SK8 or SKII module. Custom as the header pins are different between normal ones and the MW one. Motorola went with standard connections with the 810 series.

The Wi-Fi is any standard CF card. You’ll just need to have a bulkhead antenna cable made or bought it younwant to bring the antenna cable out to the rear.

Several cable builders can make them at a low cost (google should bring some up).

Your best bet would be using USB devices for both and save the aggravation

It has a GPS antenna connector in the back, i have a antenna that hooked right up to it without any problem, just don't know how to get it to work
id like to have wifi if i could.

would it be better to switch from the 800 to the 810? On Monday, November 20, 2017, 4:10:56 PM EST, Joseph Hoffman josephhoffman89@... [MW800] <MW800@yahoogroups.com> wrote:

it has to gps connection in the back of the CPU i have a antenna hooked up to it but dont know how to get it to work, is there something i can download for gps?
as for wifi whats something i can use for that?
What do you use on yours?
Or should i swap my mw800 for a mw810?

Let me break them out tomorrow. They have been in my basement for a while. I would say about $300 for both plus shipping.

Greeting all, Thanks for adding me, I was in a real situation with my rig but this page saved my bacon!! I attached a picture of my set-up. I'm still getting used to this machine, for example i'd like to explore how the video in port can be utilized. A little about myself ive been a commercial radio tech for a few years running my own business as a upfitter. Im also a ham radio operator but usually keep to myself as the local ham community in my area is probably the most unfriendly group ever.. but thats a story for another day..lol Anyway, Thanks again for this group. Regards, Allen Butler N0ZFG

I have a couple of brand new MW800s that I will give away, the catch is
they have to be picked up from my office, I will not ship them.

I am half a mile south of Disneyland, on Harbor Blvd. Anyone interested
can contact me via email, daniel@...
